# How to adopt Snap4City

## Smart City as a Service

- Supporting Org
- 100% Open Source Platform: Github
- Further developments
- Publishing Appliances and Dockers
- Training courses, docs
- Consulting
- Forums
- Etc.

**Download  
and deploy**

## On your premise

## Installation on your premise

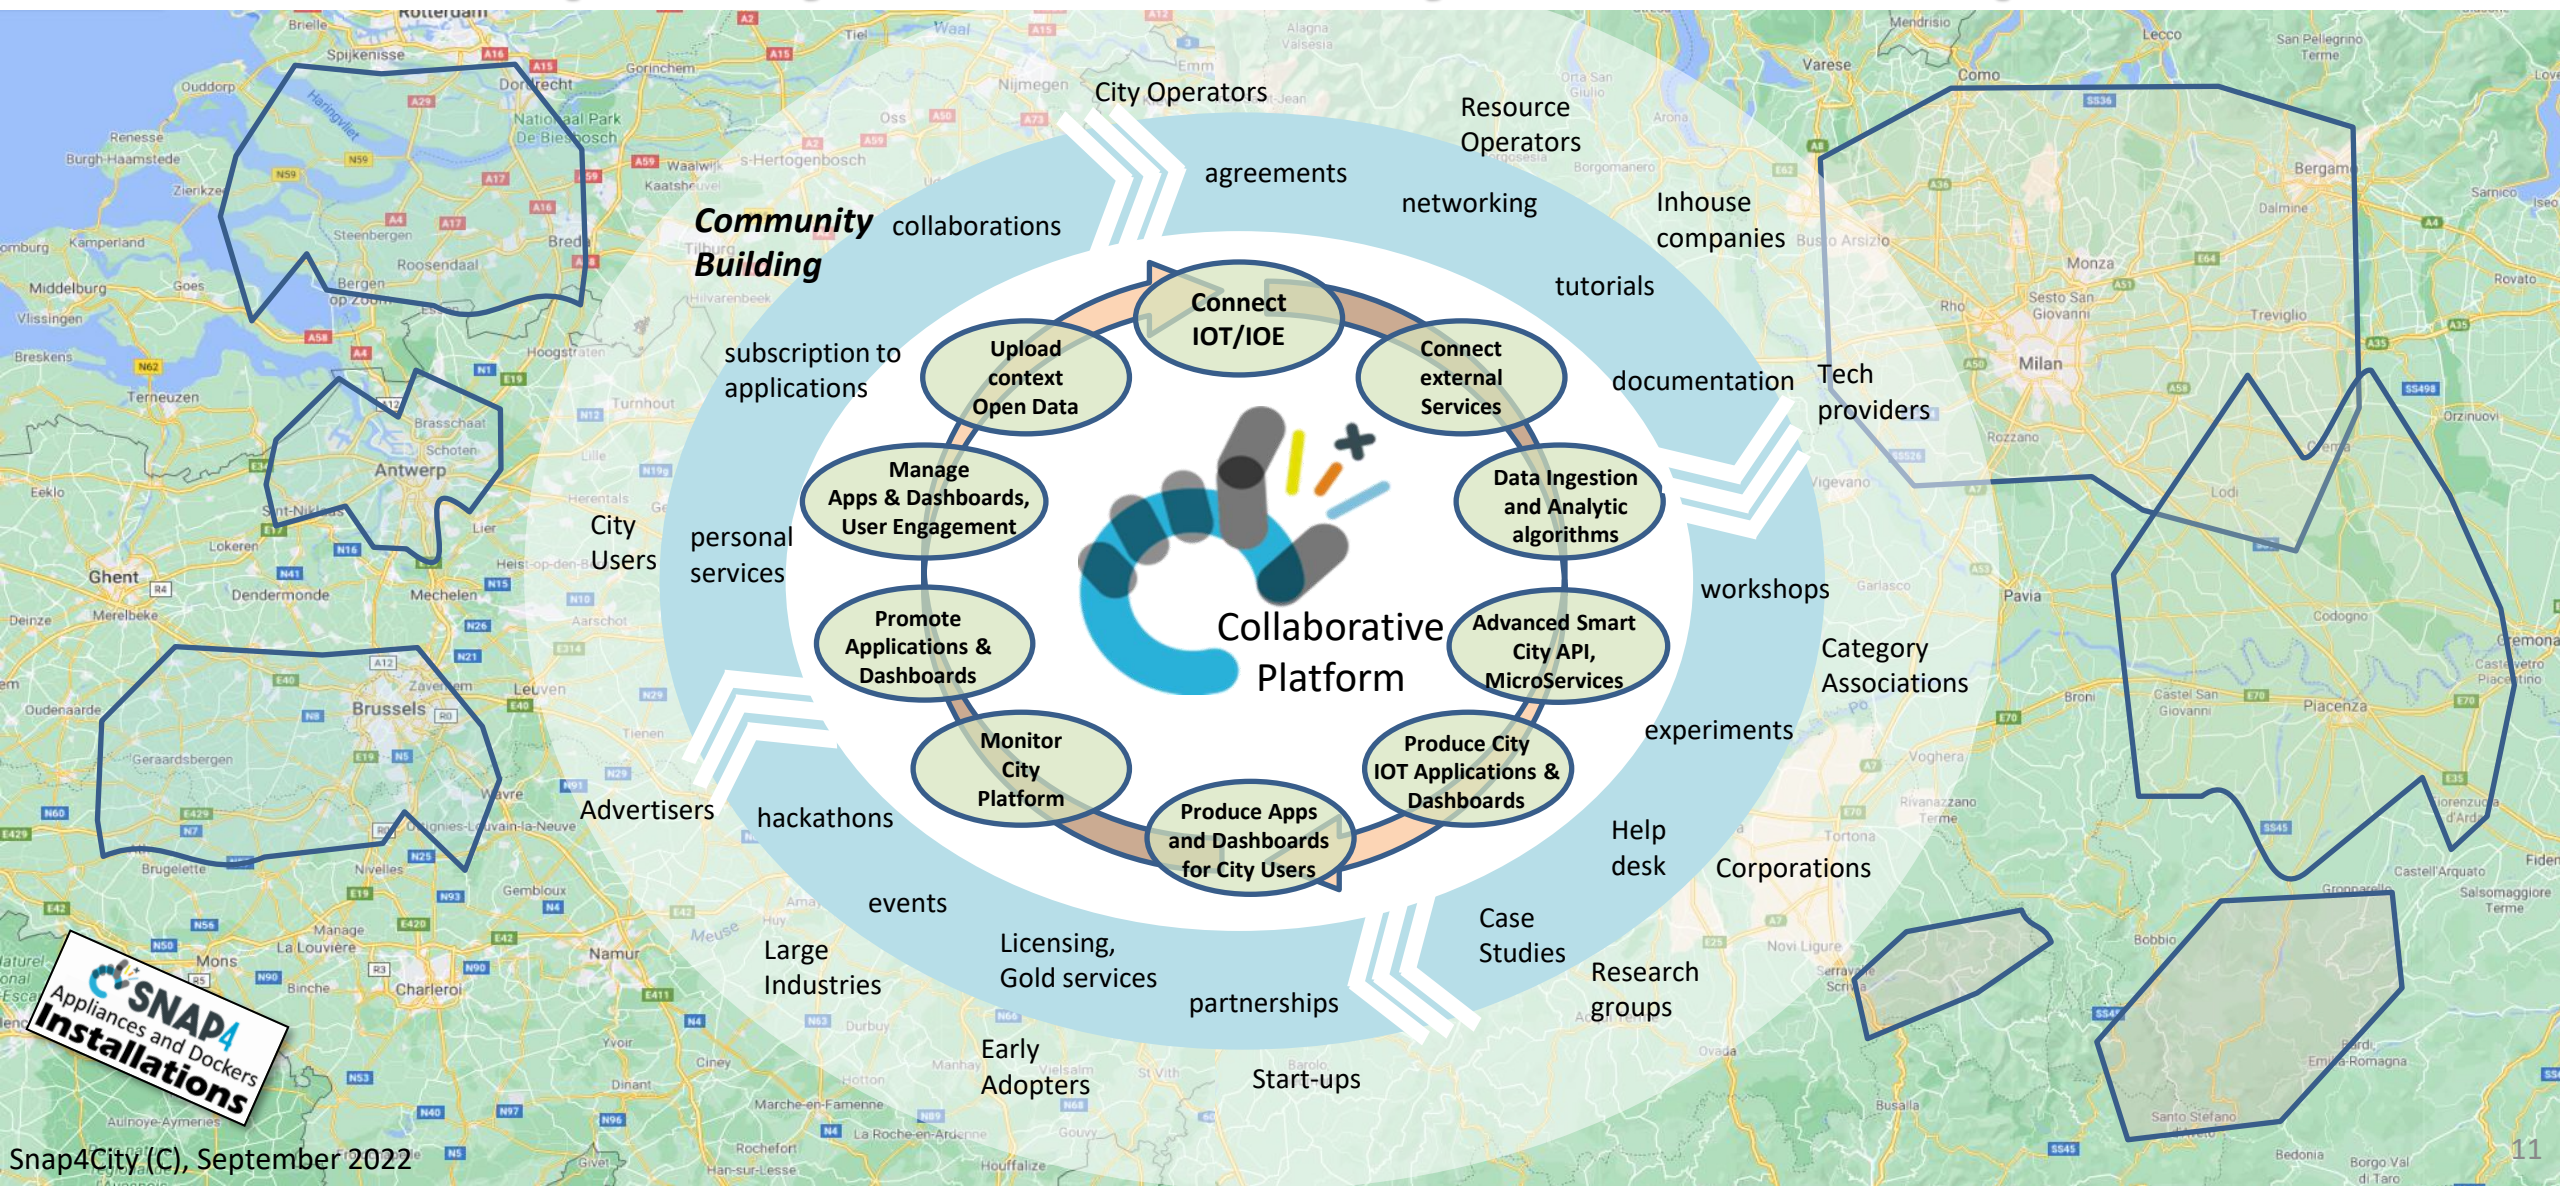

- Virtual Machines or Dockers
- Different configurations
  - From small to scalable
  - Exploiting your legacy tools
  - Interoperable with any tool
- No vendor lock-in, No tech lock-in

## Mixed solutions! For example:

- Start on Cloud as Smart City as a Service
  - Migrate on premise on the fly
- Start on Cloud into a sand box
  - Pass to install on premise what you need

# AQI Indexes estimation via R studio and IOT App

## European Air Quality Index **EAQI**

<http://airindex.eea.europa.eu/>

Pollutant	Index level (based on pollutant concentrations in $\mu\text{g}/\text{m}^3$ )				
	Good	Fair	Moderate	Poor	Very poor
Particles less than 2.5 $\mu\text{m}$ ( $\text{PM}_{2.5}$ )	0-10	10-20	20-25	25-50	50-800
Particles less than 10 $\mu\text{m}$ ( $\text{PM}_{10}$ )	0-20	20-35	35-50	50-100	100-1200
Nitrogen dioxide ( $\text{NO}_2$ )	0-40	40-100	100-200	200-400	400-1000
Ozone ( $\text{O}_3$ )	0-80	80-120	120-180	180-240	240-600
Sulphur dioxide ( $\text{SO}_2$ )	0-100	100-200	200-350	350-500	500-1250

Measurements of up to five key pollutants supported by modelled data determine the index level that describes *the current air quality situation at each monitoring station*.

The index corresponds to the **poorest** level for any of five pollutants according to the following scheme.

## Legend of Environmental data:

<https://www.snap4city.org/435>

## Common Air Quality Index **CAQI**

<http://www.airqualitynow.eu>

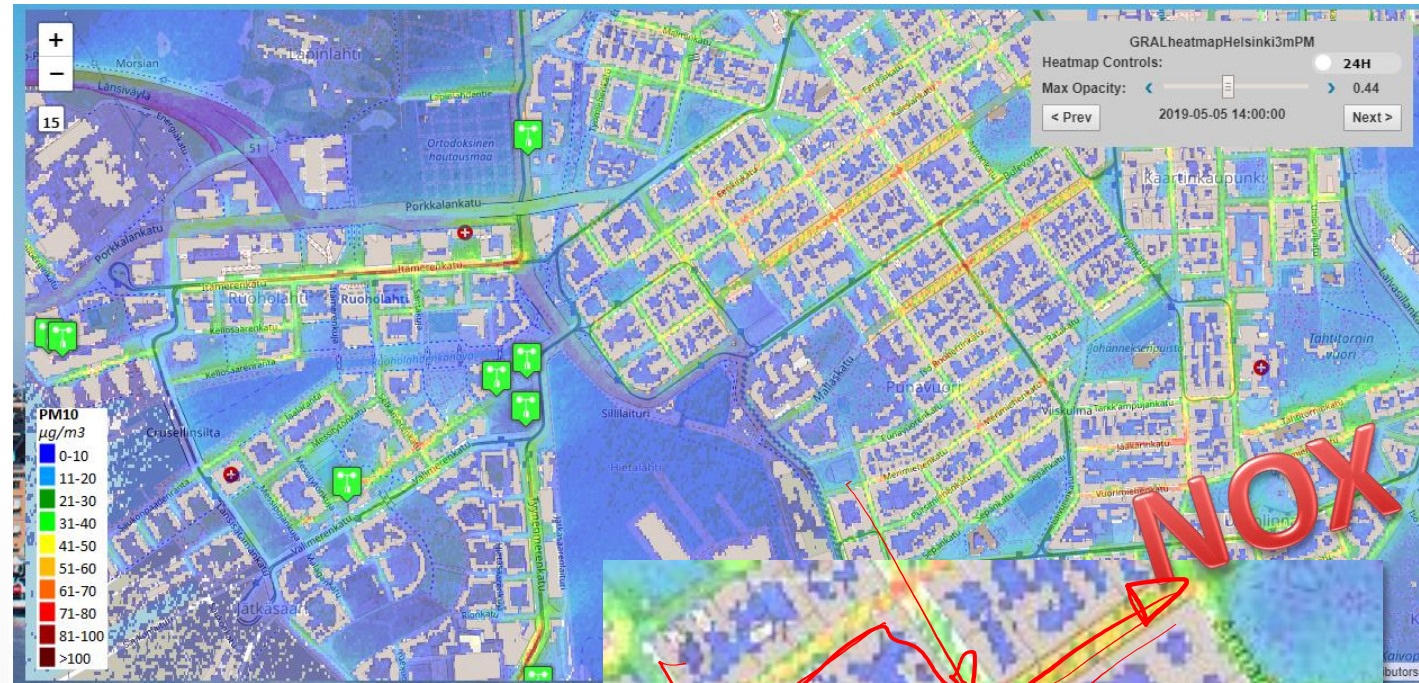

Qualitative name	Index or sub-index	Pollutant (hourly) density in $\mu\text{g}/\text{m}^3$			
		$\text{NO}_2$	$\text{PM}_{10}$	$\text{O}_3$	$\text{PM}_{2.5}$ (optional)
Very low	0-25	0-50	0-25	0-60	0-15
Low	25-50	50-100	25-50	60-120	15-30
Medium	50-75	100-200	50-90	120-180	30-55
High	75-100	200-400	90-180	180-240	55-110
Very high	>100	>400	>180	>240	>110

The index is defined away from roads (a "background" index). **CAQI** is computed on the basis of  $\text{NO}_2$ ,  $\text{PM}_{2.5}$ ,  $\text{PM}_{10}$  and  $\text{O}_3$ .

# 15MinCityIndex

What would support my neighborhood to become a 15-Minute City?

## Using the Open Data:

We developed a data analytic tool based on municipal and national open data to assess services adequacy for people living in each 15 minutes areas of the city.

Good public transport services: bus, new tram line, train stations, cycle paths.

Careggi/Rifredi is a relevant district in Florence because of hosting the main Florence/Tuscany hospitals Careggi and Meyer, but also university headquarters and many other workplaces.

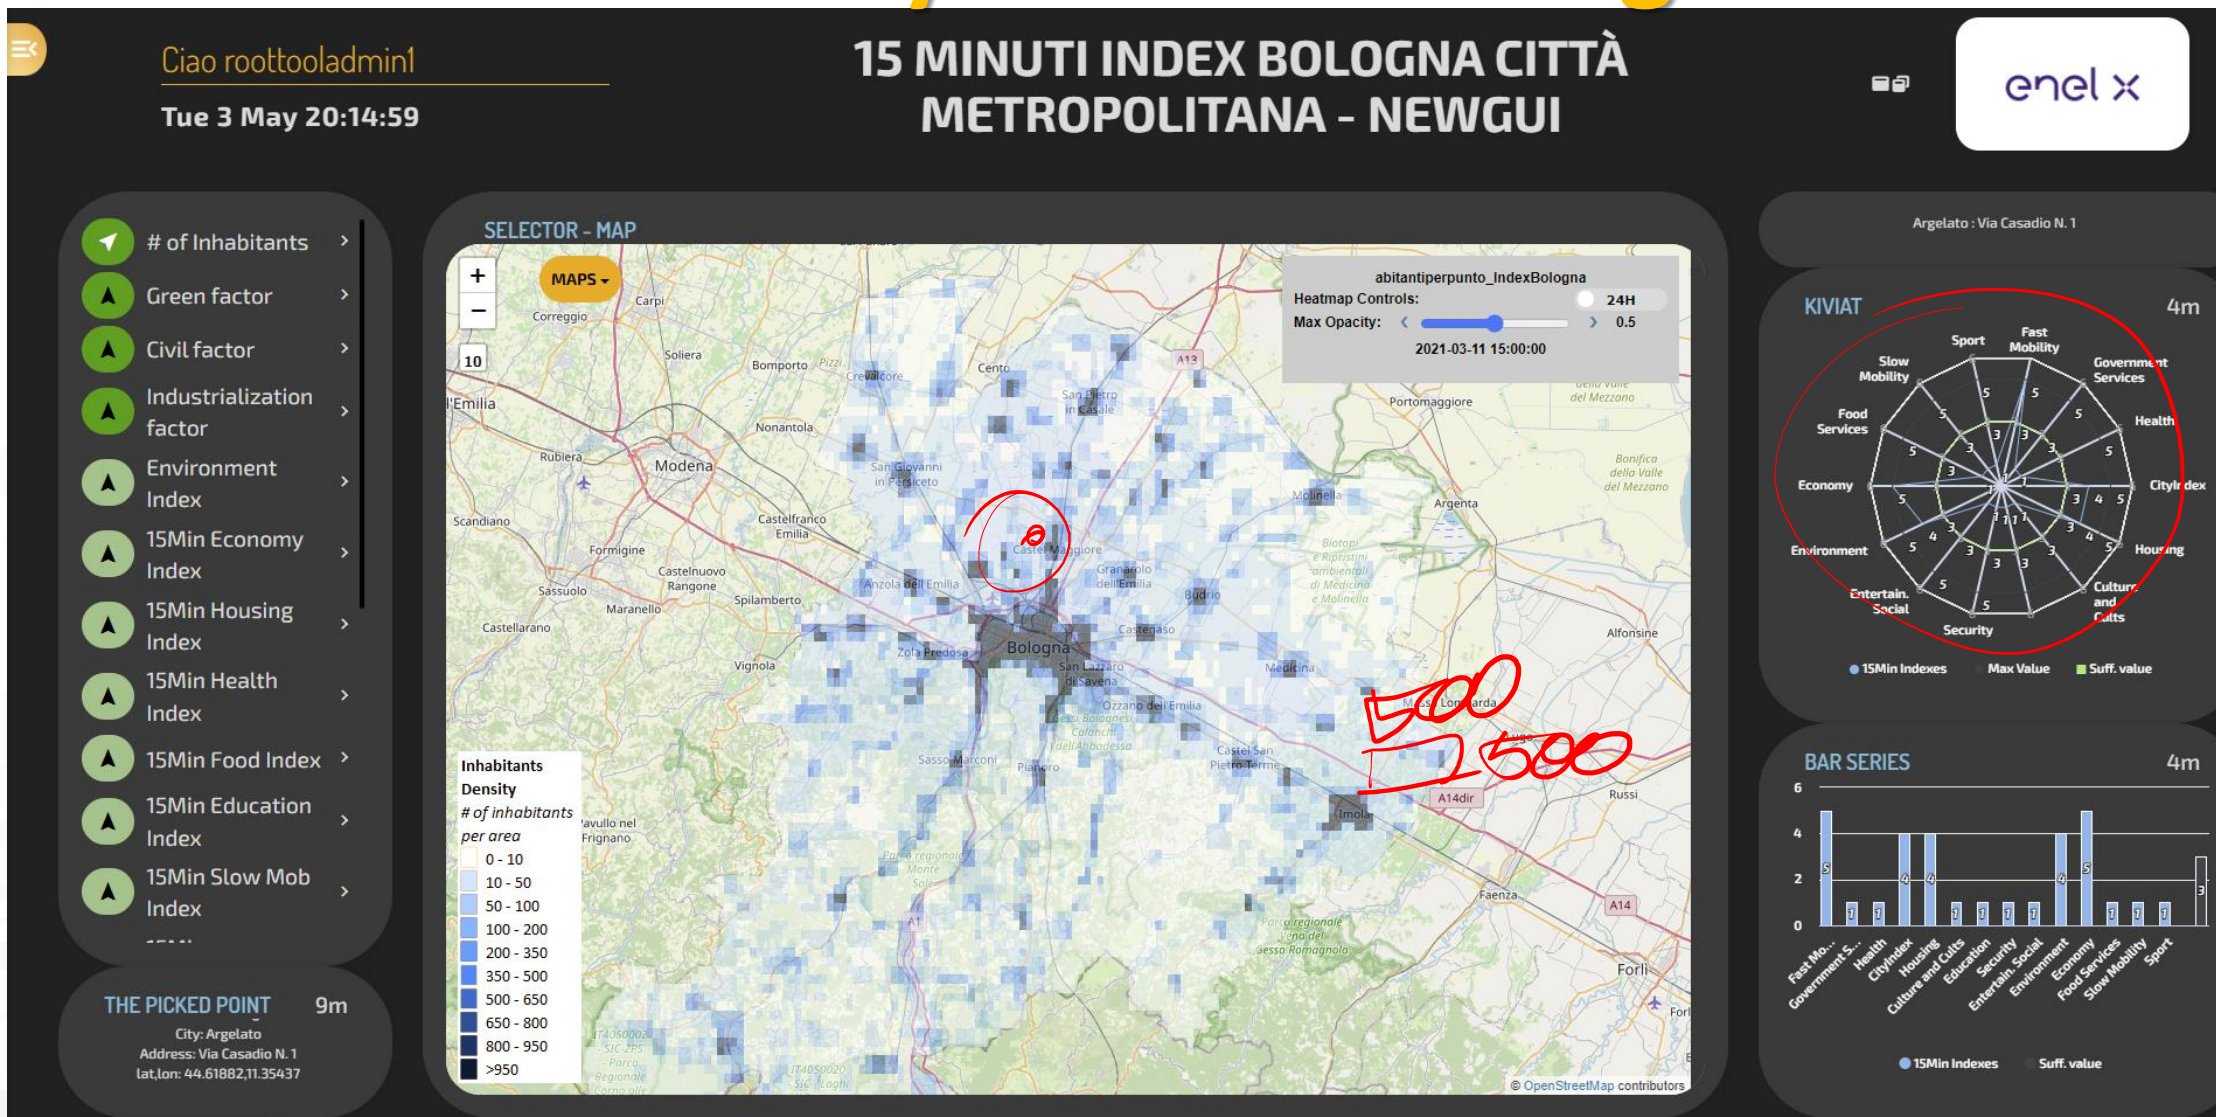

The tool supports the becoming of a 15-Minute city evaluating the service level in various domains.
