# AI to Understand Users' Behavior, Tourism, DSS

- Service quality Assessment
- Engagement, ... Suggestions
- Prediction of Offered Services Reputation
- Classification of Users' behaviour
- Counting and tracking user via thermal cameras
- Assessing the causality time of advertising
- From Wi-Fi/BT Sniffing to ODM

Goals	How to	technicalities
<b>Keep under control reputation</b>	Measuring and predicting	Multichannel collections of appreciations, AI/LLM, sentiment analysis
<b>Predicting number of presences in advances</b>	Measuring and predicting	Counting, tracking and computing Orig. Dest. Matrices
<b>Controlling the overtourism</b>	Measuring, predicting, suggesting, producing tactics and strategies	Production of suggestions, serious games, engagements, ..
<b>Stimulating actions, stimulating the second offer</b>	Suggesting, engaging, producing tactics and strategies	Production of suggestions, and engagements
<b>Identification of critical conditions</b>	Short and long terms Measuring	In deep data analysis, AI for anomaly detections
<b>Increasing resilience</b>	Monitoring and early warning	Strategies, dynamic routing, real time information to city users

## Examples of Strategies

- Focus promotion, reduce price and increase the events in less relevant attractions
- Increase/decrease the time spendable at the attractions
- Promote guided tours with specific attractions and areas
- Prepare specific dynamic prices depending on time, season, day of the week, etc. → accept reservation to jump the queue.
- Usage of Digital Signages for reporting and suggesting:
  - PROS / CONS: Queues, time to reach it, people density, etc.
  - Alternatives, etc.
- Prepare the emergency plan, etc..

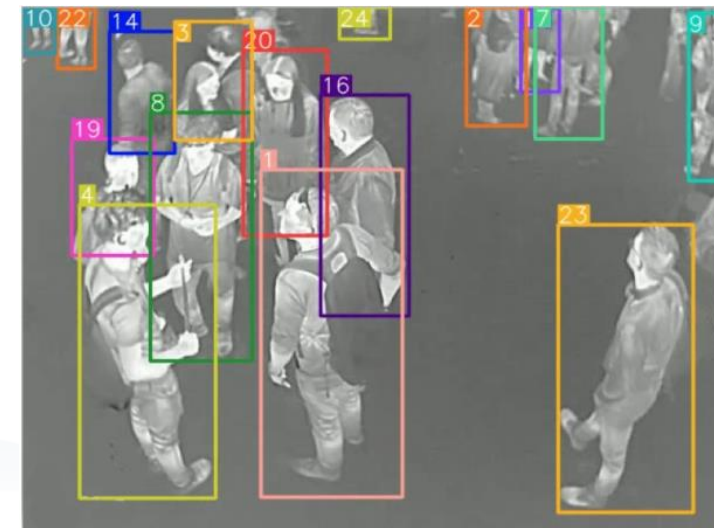

# City User behavior analysis multiple data sources

- **Main Data Sources on the market**
  - Mobile Cell data from telecom operators, macro areas
  - Mobile App data from their operators, micro areas
  - OBU from Insurance operators, only private vehicles
  - Social media: limited information and quality
  - Local Operators of: museum, ticket office, restaurants, etc.
  - Data integrators: a mixt of the above, not clear methods
- **Sensor Data:**
  - PAX Counters, Sniffer, Wi-Fi sniffers, Radar, laser, etc.
  - TV Camera color, Thermal Cameras, radar track
- ***Snap4City: integration and computing tools for deductions***

# City User Behaviour/services, Tourism and Safety

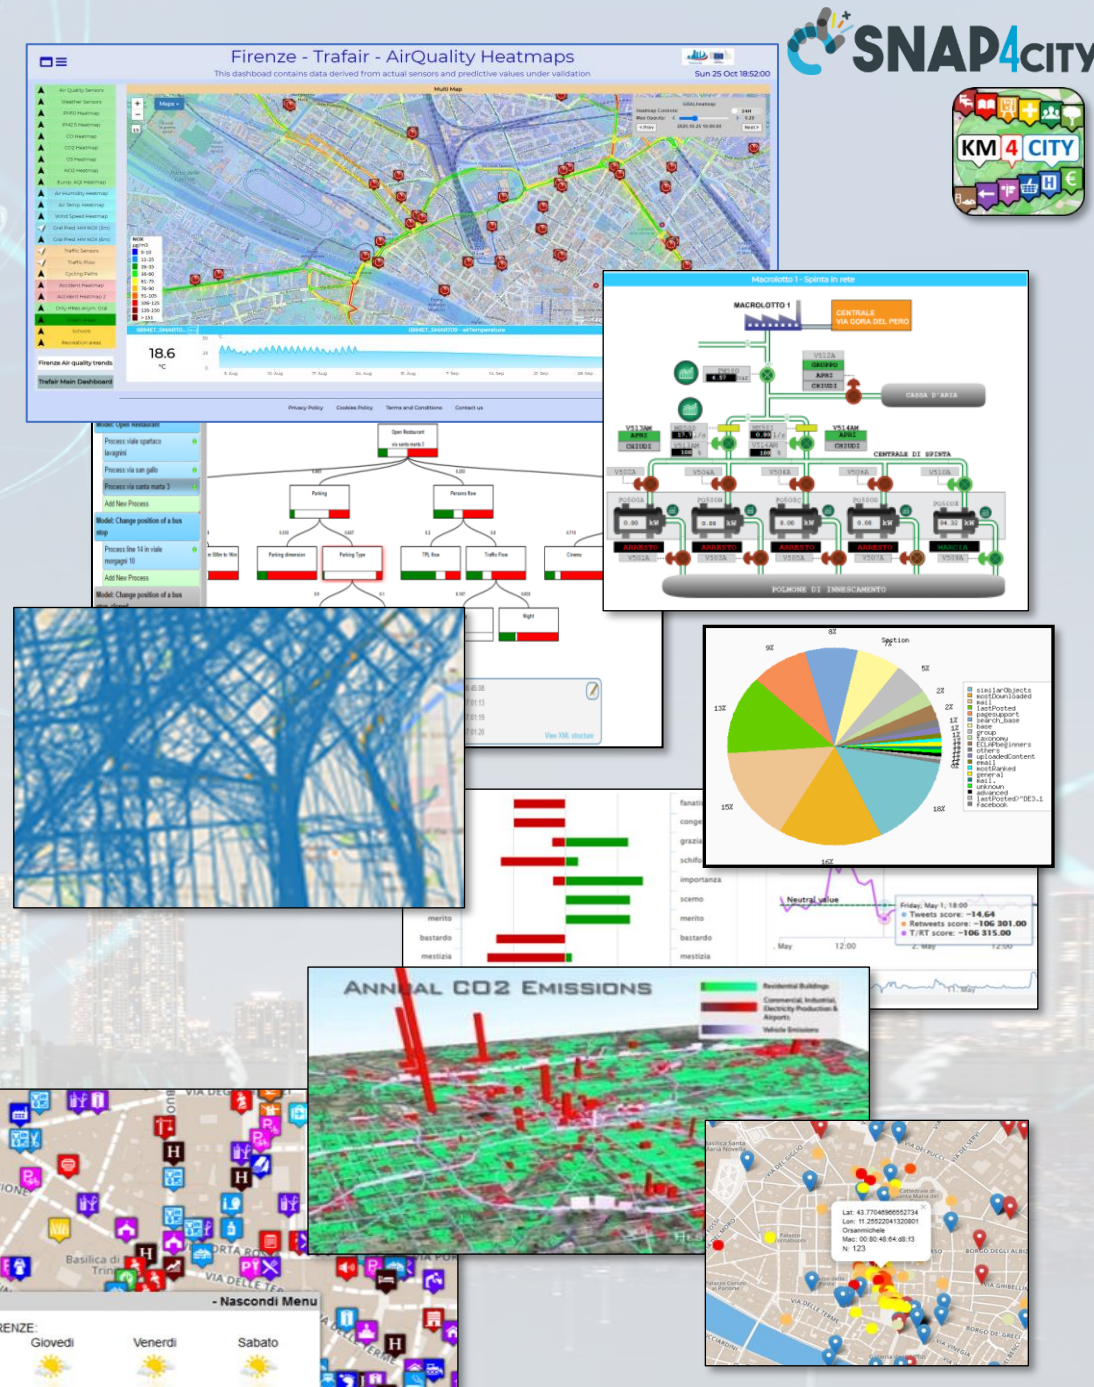

- **Goals:**
  - Improve Quality of Life and quality of services for city users,
  - **Overtourism** mitigation, sustainability
  - Costs reduction of services
  - Improve accessibility to services: citizens, Tourists, commuters, etc.
  - Improve Security/Safety of city users
- **People Flow Analysis / Management:** in/out-door, retail, attractions
  - Counting, tracking, Flows, ODM, sentiment, etc.,
  - multiple sources: thermal & TV cameras, radar sensors, PAX sniffers, mobile data, ...
  - Data and/or **OD matrices** from: Wi-Fi, traffic data, mobile phone data
  - **Suggestions:** info Tourism, digital signages, engagement, .., via email, mobile apps, etc.
- **Tourists Flows & Retail Management:** predictions of presences, services' reputations, suggestions on second offers, over-tourism, notifications, early warning,
- **KPI:** 15 MinCityIndex, energy vs people, over-tourism, accepted suggestions, precision
- **Mobile App:** final users services/informing and operators
  - Info Tourism, people flows, info mobility, sharing, ...
  - Participation, engagement, ..
- **Participatory:** problem reporting, ticketing, etc.
- **Integration of any kind:** env/weather, mobility, ticketing, presences, POI, ..

# Data Driven Decision Support

- Decision Support system
- Assessment / Strategies
- Data Rendering,
  - visual analytics, business intel..
- Data Analytics, ML, AI
- Data aggregation, Storage, indexing
- Data Ingestion

# 15MinCityIndex

*What would support my neighborhood to become a 15-Minute City?*

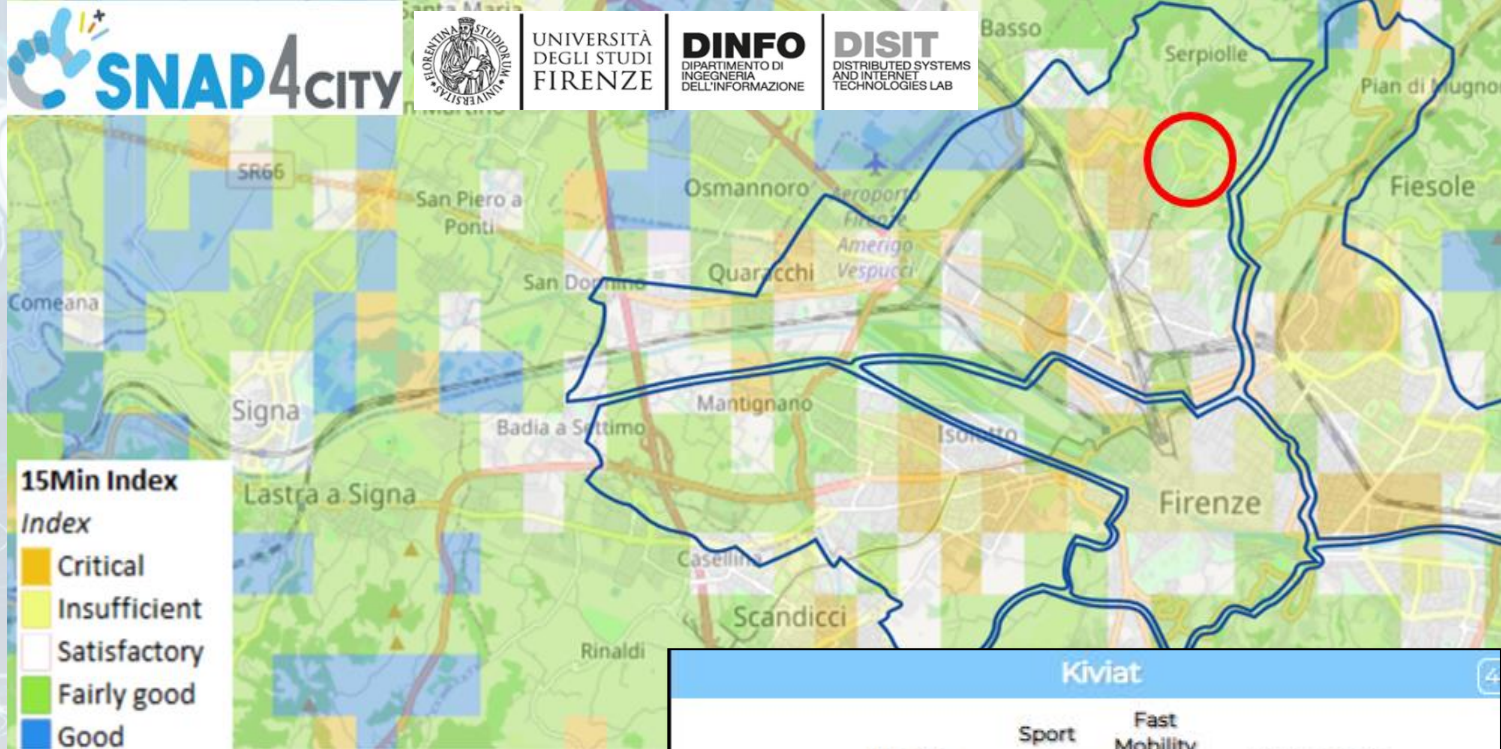

## Using the Open Data:

We developed a data analytic tool based on municipal and national open data to assess services adequacy for people living in each 15 minutes areas of the city.

Good public transport services: bus, new tram line, train stations, cycle paths.

Careggi/Rifredi is a relevant district in Florence because of hosting the main Florence/Tuscany hospitals Careggi and Meyer, but also university headquarters and many other workplaces.

The tool supports the becoming of a 15-Minute city evaluating the service level in various domains.

<https://www.snap4city.org/dashboardSmartCity/view/index.php?iddasboard=MjkzOA==>

## 22

## • 15 Minute City Index:

- 13 subindexes: energy, slow mobility, fast mobility, housing, economy education, culture and cults, health, entertainment, gov, food, security...

- Optimization of car sharing/pooling
- Monitoring and Prediction of energy consumption
- Stimulating: Bike sharing, e-bikes, car charge, etc.
- Sizing energy plants, Community of energy

- Reduction of emissions, reduction of congestions
- Smart City infrastructure: monitoring and resilience, long terms predictions, optim. operation and plan
- Effective and Low cost smart solutions
- What-if analysis, Simulations, optimization
- Origin Destination matrices computation

- Reduction of emissions, reduction of congestions
- Monitoring and Predicting: NO<sub>2</sub>, NO<sub>x</sub>, CO<sub>2</sub>, Traffic flow, pollutant, landslide, waste, etc.
- Traffic flow reconstruction, optimisation
- Demand vs Offer of Mobility analysis

- Predictive maintenance
- Decisions Support Systems
- Process optimization, control
- Industry 4.0 integrated solutions
- AI assistant for commercial activities

- Optimization of Waste Collection
- business intelligence tools for decision makers
- Reduction production costs
- Monitoring resource consumption
- Advisor for documentation, generative AI

- Shortening justice time
- Prediction of mediation proneness
- Assisting institution is taking legal decisions
- Anonymization and indexing legal docs.
- Ethical Explainable Artificial Intelligence
- Advisor for legal documentation, generative AI

# AI to Understand Users' Behavior, Tourism, DSS

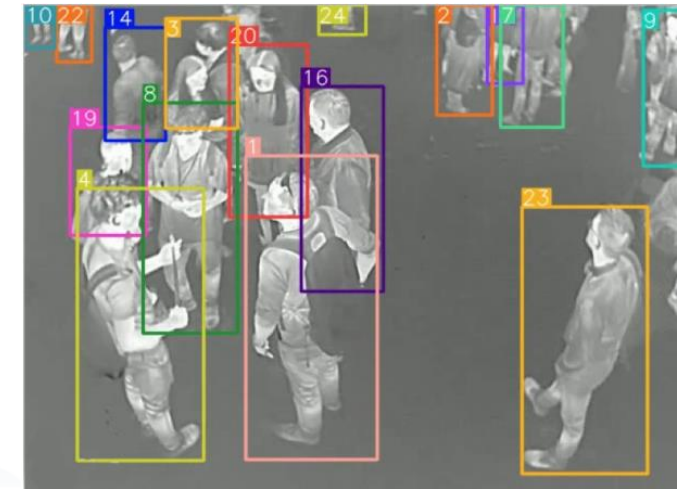

- Classification of Users' transportation modalities
- Counting and tracking user via thermal cameras
- Prediction of Offered Services Reputation
- Assessing the causality time of advertising
- From Wi-Fi/BT Sniffing to ODM

# City User Behaviour/services, Tourism and Safety (2024/8)

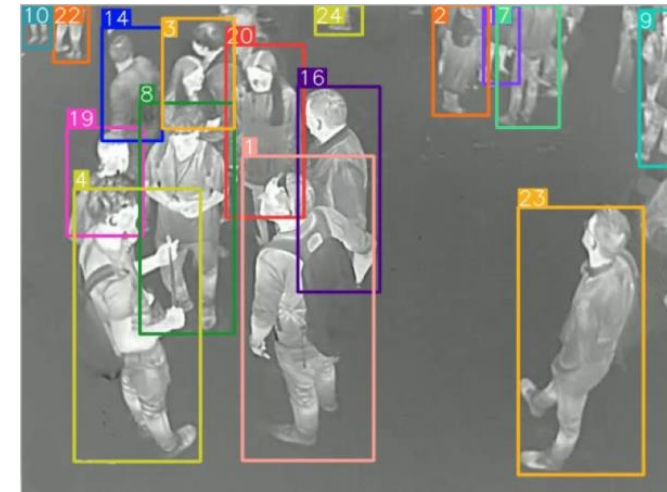

- **Goals:**
  - Quality of Life, quality of services, over tourism mitigation, sustainability
  - Costs reduction of services
  - Accessibility to services: citizens, Tourists, commuters, etc.
  - Security/Safety of city users
- **Solutions for Operation (monitoring, managing, mobile apps, digital signages, control rooms)**
  - Monitoring services: tickets, reputation, usages, areas, etc.
  - Monitoring user behaviour (counting, trajectories): indoor/outdoor, hot places/services, ports, beaches,
  - Computing: origin destination, trajectories, travel means, etc.
  - Early detection/warning of critical conditions, connection with Video Management Systems
  - Managing entrances in city areas: restricted areas, touristic busses, etc.
  - Production of info-tourism, recommendations, nudging to city users and operators, second offer promotion
  - Providing Virtual Assistants for City Services, Tourist Offices, etc.
  - Monitoring reputation of services via: social media, blogs, etc.
  - Collecting complains, requests, participations from City users via mobile apps
  - Computing predictions of any kind
- **Solutions for Planning (optimization and what-if analysis)**
  - Reduction of Pollutant Emissions, via optimization
  - Optimization plan to distribution of workload on multiple touristic offers/services, area cleaning, etc.
  - Predicting reputation of services, touristic and operative
- **Algorithms and computational solutions, see next slide**

# City Users Behaviour, Safety, Security and Social Analysis (2024/8)

- **People detection and classification:** persona, strollers, bikes, etc. (ML, DL)
- **people counting and tracking**, head counting, people trajectories (via thermal cameras, ML, DL)
- **People flows prediction** and reconstruction, (ML, DL)
  - Wi-Fi data, mobile apps data, Mobile Data, etc.
- **User's behaviour analysis, People flow analysis** from PAX Counters and heterogenous data sources (ML, AI)
  - origin destination matrices, hot places, time schedule,
  - Recency and frequency, permanence, typical trajectory, etc.
- **Computing User engagement and suggestions** for sustainable mobility (Rule Based, ML)
- **Social media analysis** on specific channel, specific keywords: see Twitter Vigilance,
  - Reputation, service assessment: MultiLingual NLP and Sentiment Analysis, SA
  - Tweet proneness, retweet-ability of tweets, impact guessing
  - Audience predictions on TV channels and physical events, locations
  - Prediction of attendance of events and on attractions
- **Virtual Assistant construction**, LLM, NLP, Sentiment Analysis (DL, NLP)
- **Video management System integration** for security
- **15 Minute City Index**, etc. (modeling and computability)
- Computing **SDG**, etc., (DP)
- Etc

# User Behaviour: People Counting, Tracking, etc.

- **Behavior analysis in open or closed spaces**
  - HUB, metro, stations, production lines, parking lots, critical areas in cities,
  - shopping centers, retail, etc.
- **Thermal Cameras**
  - GDPR compliant
- **AI injection**
  - classification and counting
  - Identification of critical situations
  - Early warning
  - Integration with PAX counters, and with ODM data from operators
- **Real-time estimation**
  - Directly on the camera
  - High precision and reliability
  - Used by: Cuneo, Florence, Genoa, etc

# People counting and tracking

# People Detection Plugin on AXIS Camera

- **Machine Learning**
- **Detection, classification, count:**
  - people, bikes/scooters, and strollers, ..
  - Age, ...
  - critical conditions
  - Trajectories, origin destination matrix
  - Statistics over time, counting people in the area
- **Counting Accuracy: 92-99%**
  - mAP\_0.5 (0-75): 0.92-0.99
- **Supported** and tested models:
  - Q1951 (tele), Q1952 (wide angle)
- **Output** on MQTT, NGSI
- Large range of application no tuning

# Participation and Engagement

- **City users:** residents, students, commuters, tourists, visitors, business visitors, etc.
- **Participation**
  - Collect complaints about city services
  - Multichannel: mobile Apps, open call numbers, web pages and blogs, social media, help desk, info points, white boxes in the city, telegrams, SMS, etc.
  - Data integration, usage of LLM, AI deep learning for sentiment analysis, text understanding, etc.
- **Engagement**
  - Involving city users to perform actions: take photo, provide a suggestion a rank, etc.
- **Commonalities:** data collection, workflow management, operators, etc.

Come creo una dashboard?

Per creare una dashboard, puoi utilizzare la piattaforma Snap4City. La dashboard si compone di un insieme di widget grafici che possono essere impostati separatamente assegnando una serie di parametri, come origine dati, dimensioni, colori, forma, font, allarmi, relazioni con altri, ecc. (SOURCE: Snap4 City per la creazione di Smart City Control Room, SCCR). Inoltre, la piattaforma offre la possibilità di creare vere e proprie applicazioni interattive, multipagina/multidashboard, e non semplici storie monopagina da scrollare. Puoi anche condividere la dashboard con altri utenti anche fuori dalla Smart City Control Room tramite canali autenticati e protetti in HTTPS, in accordo al GDPR (SOURCE: Snap4 City per la creazione di Smart City Control Room, SCCR). Per vedere alcuni esempi di dashboard, puoi visitare il sito [<https://www.snap4city.org/dashboardSmartCity/view/index.php?iddasboard=MjU0Mg==>](<https://www.snap4city.org/dashboardSmartCity/view/index.php?iddasboard=MjU0Mg==>) (SOURCE: Snap4 City 1st Overview v4 8 annot). Tuttavia, non ho trovato informazioni dettagliate sulla procedura di creazione di una dashboard. Se hai bisogno di ulteriore assistenza, ti consiglio di contattare direttamente il team di supporto di Snap4City. Non so dirti altro in merito.

Write a message...

# SnapAdvisor: AI based Assistants, DSS

- **Snap4CityAdvisor:**
  - for developers and promoters knowing all Snap4City and DISIT Lab literature, articles, manuals, slides, codes, etc. The SnapAdvisor with this skill is accessible only for selected Snap4City users. It allows users of saving a lot of time by providing answers to facilitate the development of smart solutions, to the exploitation of Snap4City tools, and recently on data and services accessible on the platform, producing offers, etc.
- **Legal Advisor**
  - expert on specific disputes at service of the Legal department of Careggi Hospital of Florence. It allows to save time in recovering precise information from complex legal documents, ordering of events, understanding causes and effects, producing reports, etc.
- **Expert of industrial machines, user manuals, technical manuals, rules,**
  - Answering on technical manuals
- **Complains and Questionnaire analysis**
  - Answering on trends, via questionnaires collected via QR, blobs, emails, etc.
- **Commercial Advisor:**
  - processing orders understanding them and preparing the offer, thus reducing the time to process them.
- **Generative Designs:**
  - Multimodal Generative AI supporting designers in producing innovations
- etc.

See: "Context-Aware Retrieval Augmented Generation using Similarity Validation to handle Context Inconsistencies in Large Language Models", IEEE Access, 2025. <https://doi.org/10.1109/ACCESS.2025.3614553>

# SnapAdvisor

- **working on your private content** and thus producing answers.
  - Select a subset of documents
- **domain control:** you can decide the knowledge base (internal wikis, PDFs, APIs),
- **explainability** capability, provide references to your documents
- **multilingual via content**
- **modularity:** it is possible to pass from one collection of documents to another, and multiple users can work on the advisor asking for different topic on different collections/domains at the same time, independently as needs change, without any interferences among them.
- **lower hallucinations**

# Complains Analysis to Support Decision Making Processes

Standard data/form  
creation  
for reputation analysis:

Summary of Findings (June–August 2025, 36 responses received - Golden Bay, Malta) produced by a Large Language Model (LLM) based on the responses obtained from questionnaire

- Initial Sentiment Analysis/NLP by analysing questionnaires collected from QR code distribution.

## Average Ratings (scale -2 to +2)

Overall experience: +0.67 → slightly positive but inconsistent (range -2 to +2)

Toilets: -0.83 → strongly negative, among the worst-rated aspects.

Showers: -0.31 → generally negative.

Bins distribution: -0.33 → slightly negative, with complaints about lack of bins.

Safety & lifeguard services: +0.55 → moderately positive.

Cleanliness: -0.52 → overall negative, many complaints about cigarette butts and plastics.

Natural conditions (dunes, seawater, etc.): -0.40 → negative, issues with seagrass, water quality.

## Twitter Vigilance

- Prediction of Audience on TV programme
- Prediction of retweet proneness: RF, GBM, ..
- Project
  - TwitterVigilance
  - +NLP, SA

### Predicting at EXPO2015

Figure 5: Comparison among the selected predictive models discussed and presented in Tables 2 and 3 with respect to the real number of visitors. Both training and validation

## Predictive models VS metrics relevance

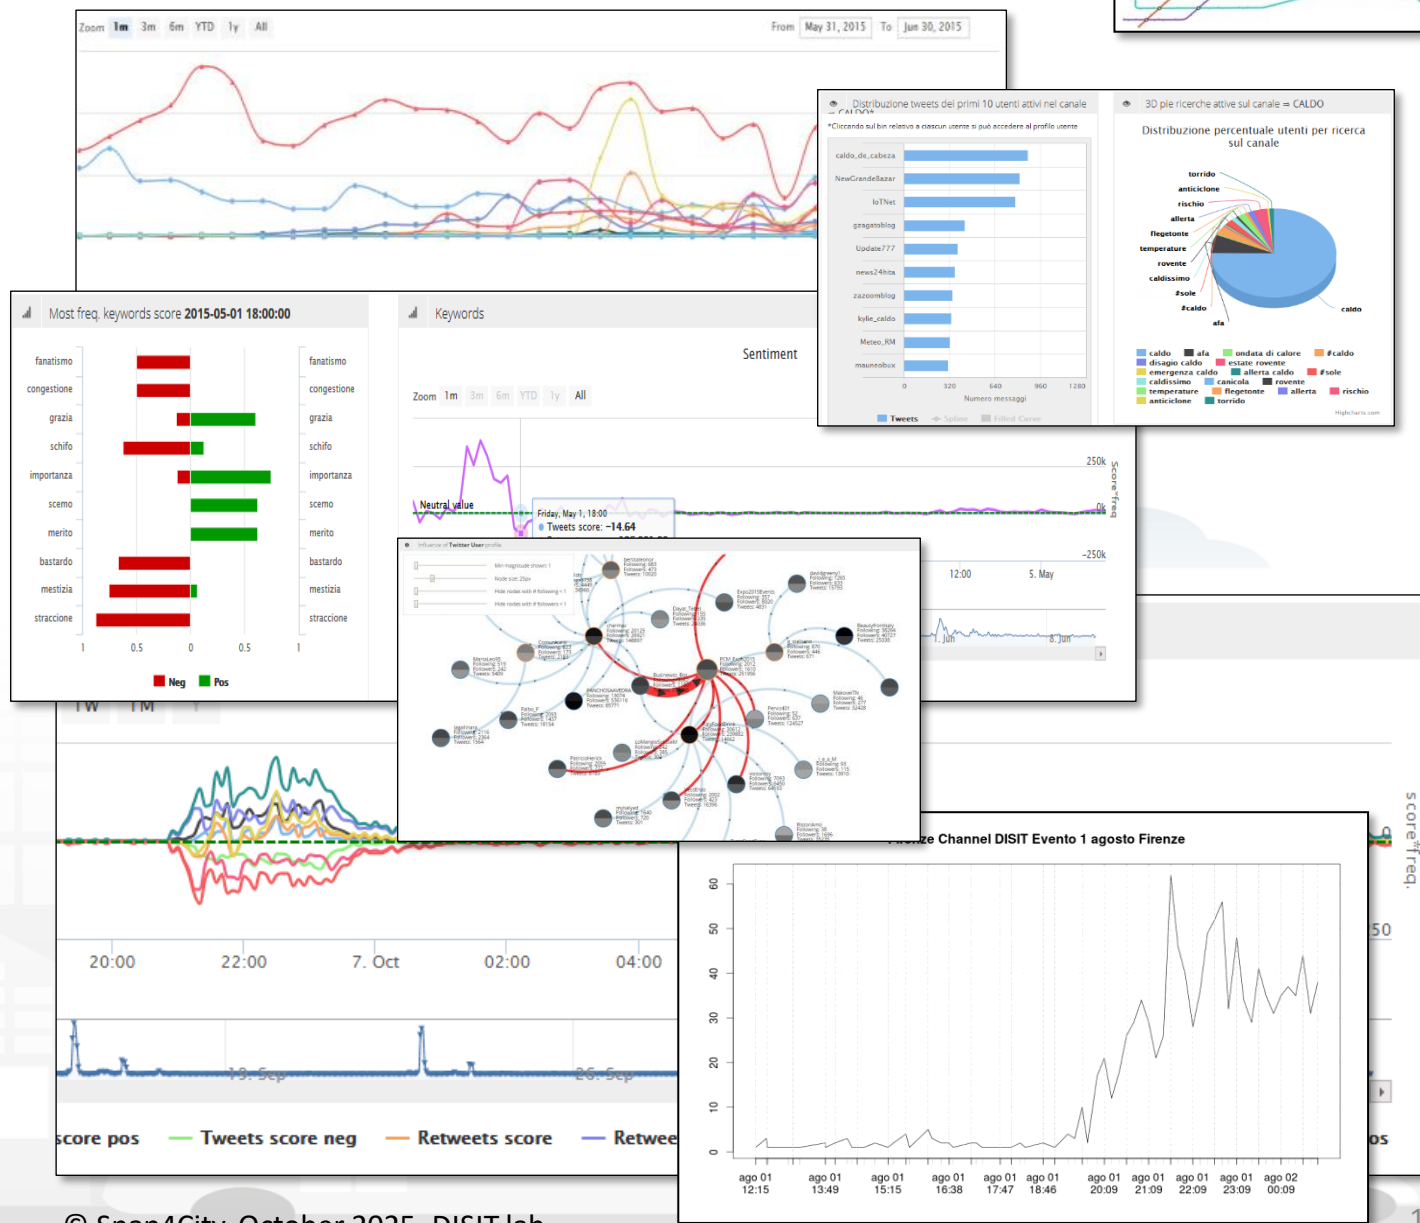

# Twitter Vigilance

- <http://www.disit.org/tv>
- <http://www.disit.org/rttv>
- Citizens as sensors to
  - Assess sentiment on services, events, ...
  - Response of consumers wrt, ...
  - Early detection of critical conditions
  - Information channel
  - Opinion leaders
  - Communities
  - Formation
  - Predicting volume of visitors for tuning the services

# Indoor People Analysis and Suggestions for Smart Retail

- **Feedback Project:**

- Flexible Advanced Engagement Exploiting User Profiles and Product/Production Knowledge
- VAR, PatriziaPepe (Tessilform), DISIT, SICE
- Keywords: retail, GDO, ...

- **Goals and drivers:**

- adaptive user engagement, customer experience
- Advanced user profiling, user behaviour analysis
- IOT and instrumentation
- Predictive models for engagement
- Integrated in city customer experience

- **Aiming to solve current State of the Art issues:**

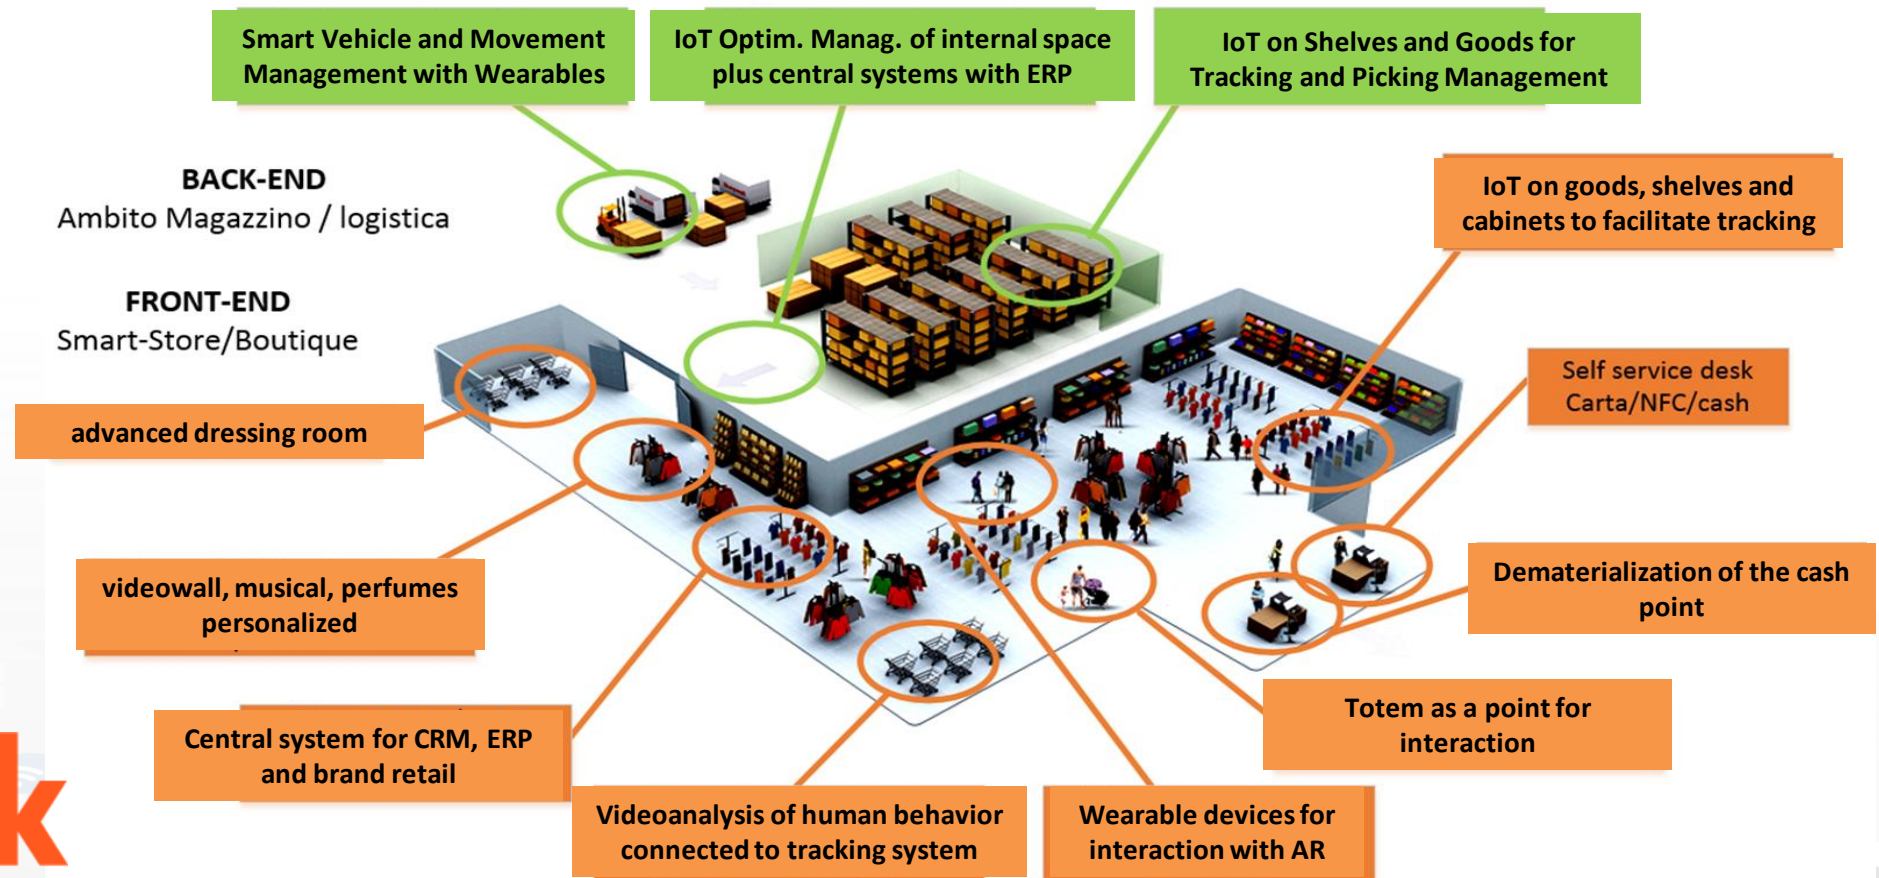

- Cold start problems in generating recommendations for new users, also addressing seasonality of products and items
- GDPR compliance

feedback

- Using the stimulus of the recommendation system, we have increased the customers' attention of the 3.48%
- The solution is also functional in presence of a low number of customers and items
- The solution solved the cold start problems
- GDPR compliant

**feedback**

# Suggestions

**customer similarity** for each customer cluster the most representative items are suggested;

**item similarity:** considering the last items purchased by the customer according to the information contained into its profile, and randomly selecting items in the same item clusters;

**item complementary:** considering items that may complement the last items that have been bought by the customer according to a table of complementary items;

**item associated:** in order to improve a customer's purchase frequency, we generated suggestions for customers who purchased an item in the last three months;

**suggestions for serendipity:** randomly selecting items to be suggested from the whole present collection, taking also into account what is available in the physical shop;

## Item selection

1. Item previously not purchased
2. Confidence recommended item. Confidence established with Market Basket Analysis

- 20% of suggestions produced have been issued
- 9.84% of suggestions have led to transaction and/or trial
- 3.48% of increment of interest with respect of the previous period without recommendation
