# Free Trial

- Register on [WWW.snap4city.org](http://WWW.snap4city.org)
  - Subscribe on **DISIT Organization**
- **You can:**
  - Access on basic Tools
  - Access to a large volume of Data
  - Create Dashboards
  - Create IOT Applications
  - Connect your IOT Devices
  - Exploit Tutorials and Demonstrations

*IF you need to go more in deep you can ask us to pass at the next Role becoming full AreaManager with full rights of development, also for Data Analytics, machine learning, etc.*

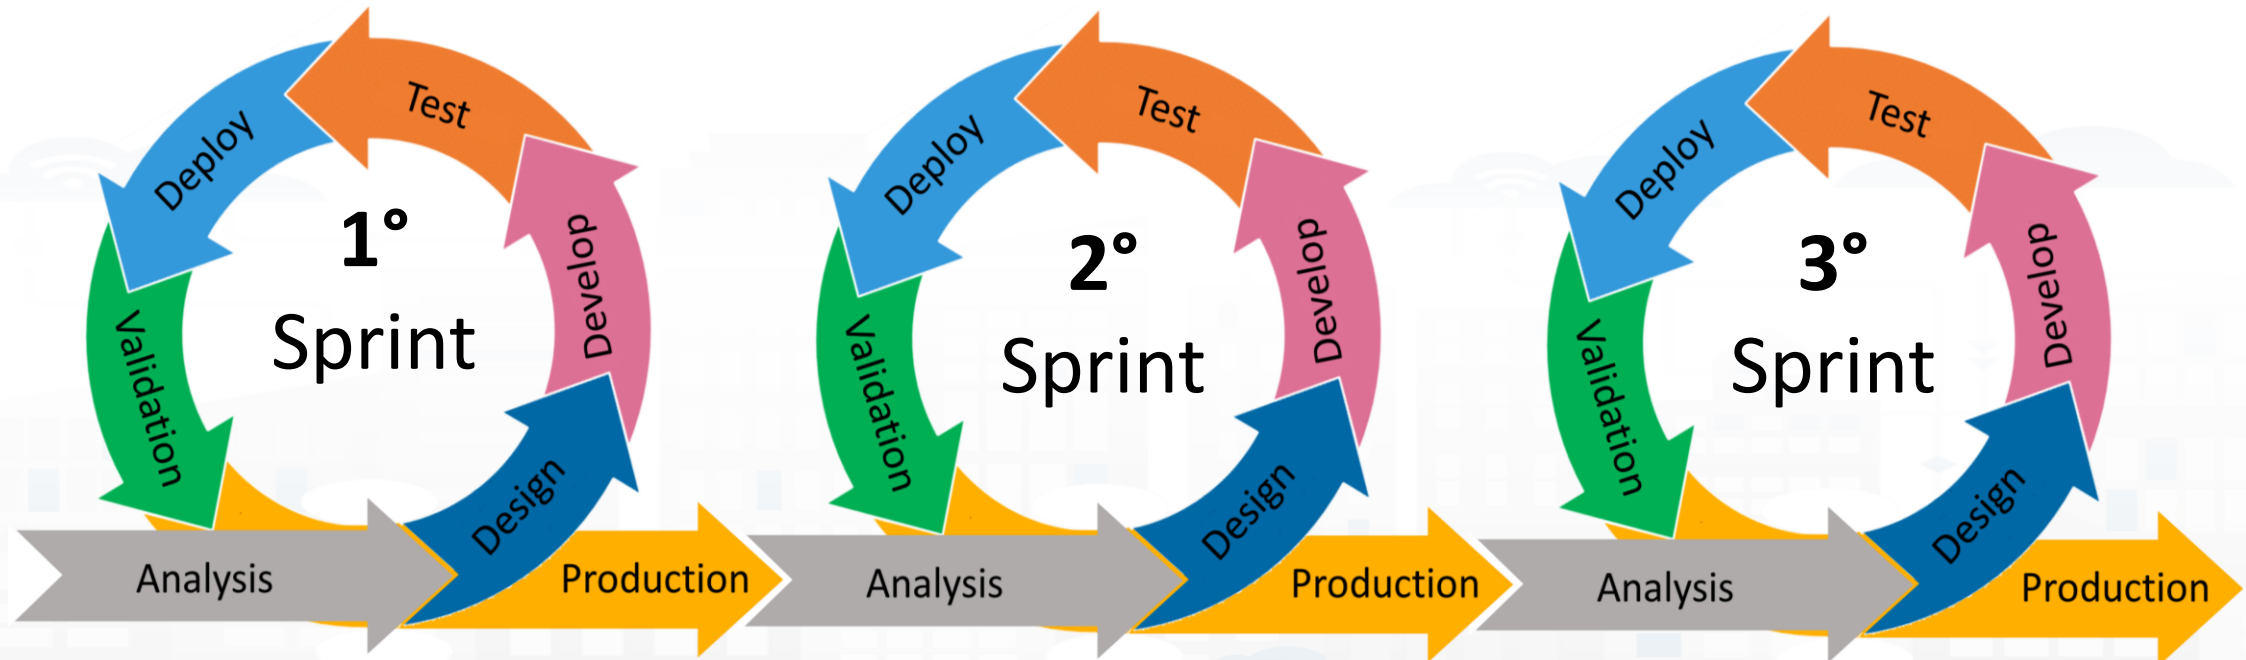

# Agenda of forth part

- Why and Where use DA, AI and XAI ? General Life Cycle
- Data Processing
- What is Data Analytics, DA and Artificial Intelligence, AI
- List of the most relevant available DA and AI Solutions
- Predictions and Anomaly detections
- Computing: Higher Level Types Data and their representations
- How AI/XAI, and Life Cycle
- Using DA, AI, XAI in Snap4City infrastructures
  - Data Analytics  $\leftrightarrow$  IoT App / Proc.Logic
- Decision Support Systems and What-If Analysis
- Routing, Multimodal Routing, Dynamic Routing
- Business Intelligence and Visual Analytics
- Training Material

# Agile Development Life Cycle by sprint

## ProcessLogic, IoT App, computing

IOT Application

## In This Section

- Data Processing, definition
- Computing KPI & Indexes
- Traffic flow data
  - Computing Traffic Flow In/out of the city
  - Computing CO2 from traffic flow data
- Computing quality of Public Transportation

# Definition: Data processing

- **Data Processing:** transformation of data into meaningful information through various operations and manipulations.
  - make informed decisions, and support various business processes
  - **Via:** collecting, data entry, organizing, analyzing, interpreting data to extract insights, validation, sorting, filtering, aggregation, computing indexes, calculation, and reporting.
  - → convert data into a more usable and valuable form for further analysis or decision-making purposes.
- ***Snap4City provides support for implementing Data processing:***
  - *Proc.Logic / IoT Apps: on cloud and on Edge*
  - *Python processes in containers or on Edge*
  - *R Studio processes in containers, on server, on premise*

- **United Nations Sustainable Development Goals, SDGs** (for which cities can do more to achieve some of the 17 SDGs, <https://sdgs.un.org/goals>);
- **15 minutes cities** (where primary services must be accessible within 15 minutes on foot);
- **objectives of the European Commission** in terms of pollutant emissions for: NO<sub>2</sub>, PM<sub>10</sub>, PM<sub>2.5</sub> ([https://environment.ec.europa.eu/topic/air\\_en](https://environment.ec.europa.eu/topic/air_en));
- **PUMS: mobility and transport vs wnv**
- **SUMI: mobility and transport vs env**
- **ISO indicators: city smartness, digitization. Tech level**
- ....

Global  
Vs  
Local

Pollutant	Averaging period	Objective and legal nature and concentration	Comments	WHO guidelines	
				Concentration	Comments
PM <sub>2.5</sub>	One day			25 µg/m <sup>3</sup> (*)	99 <sup>th</sup> percentile (3 days/year)
PM <sub>2.5</sub>	Calendar year	Target value, 25 µg/m <sup>3</sup>	The target value has become a limit value since 1 January 2015	10 µg/m <sup>3</sup>	
PM <sub>10</sub>	One day	Limit value, 50 µg/m <sup>3</sup>	Not to be exceeded on more than 35 days per year.	50 µg/m <sup>3</sup> (*)	99 <sup>th</sup> percentile (3 days/year)
PM <sub>10</sub>	Calendar year	Limit value, 40 µg/m <sup>3</sup> (*)		20 µg/m <sup>3</sup>	
O <sub>3</sub>	Maximum daily 8-hour mean	Target value, 120 µg/m <sup>3</sup>	Not to be exceeded on more than 25 days per year, averaged over three years	100 µg/m <sup>3</sup>	
NO <sub>2</sub>	One hour	Limit value, 200 µg/m <sup>3</sup> (*)	Not to be exceeded more than 18 times a calendar year	200 µg/m <sup>3</sup> (*)	
NO <sub>2</sub>	Calendar year	Limit value, 40 µg/m <sup>3</sup>		40 µg/m <sup>3</sup>	

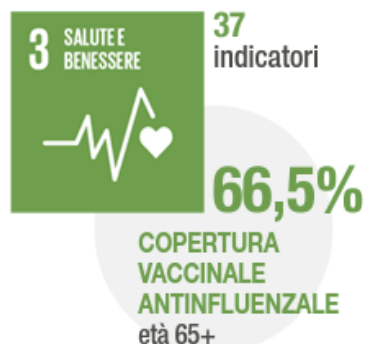

# SUSTAINABLE DEVELOPMENT GOALS

# Sustainable Development Goals (SDGs) - Obiettivi di sviluppo sostenibile

RAPPORTO 2021

# Indicators, KPI, etc.

- Can be **formally defined or not**
  - Italian PUMS is not fully formally defined
  - SUMI is formally defined
  - SDG is not formally defined
- In any case they are **based on SubIndicators / SubIndex**
  - They can and have to be evaluated with *some formulas* and compounded to obtain the general indicator, and the formulas should be validated
  - To use the SubIndicator/Index is a way to reduce the problem and complexity

# Concept 15MinIndex

Assessing in each point of the area (city or rural) the capability of providing services ad 15 Min walking distance for the city users

- Several different approaches from early Carlos Moreno concept
- Several different subindexes

Carlos Moreno Functions	Li et al., 2019	15MinCityIndex subindexes	
living	Gov	Housing viability Govern Services Safety Services Culture and Cults Services	
	Roads	Environment Quality Slow Mobility Services Fast Mobility Services	
	[Medical]	Sport Services	
	working	Economy/ sustainability	
	commerce	dining	Food Services
	healthcare	medical	Health Services
	education	edu	Education Services
	entertainment	entertainment	Entertainment Services

# 15MinCityIndex

**What would support my neighborhood to become a 15-Minute City?**

## Using the Open Data:

We developed a data analytic tool based on municipal and national open data to assess services adequacy for people living in each 15 minutes areas of the city.

Good public transport services: bus, new tram line, train stations, cycle paths.

Careggi/Rifredi is a relevant district in Florence because of hosting the main Florence/Tuscany hospitals Careggi and Meyer, but also university headquarters and many other workplaces.

The tool supports the becoming of a 15-Minute city evaluating the service level in various domains.

# Traffic Flow Data

**11** SUSTAINABLE CITIES  
AND COMMUNITIES

**13** CLIMATE  
ACTION

# Vehicle Flow

- Traffic Flow data can be used for a number of applications:
  - Traffic Flow Analysis and reconstruction
  - What-if-analysis
  - forecasting of pollutants
- The main problem is the need of consistent data:
  - Traffic Flow sensor are not 100% reliable
  - There could be some problem in data acquisition process

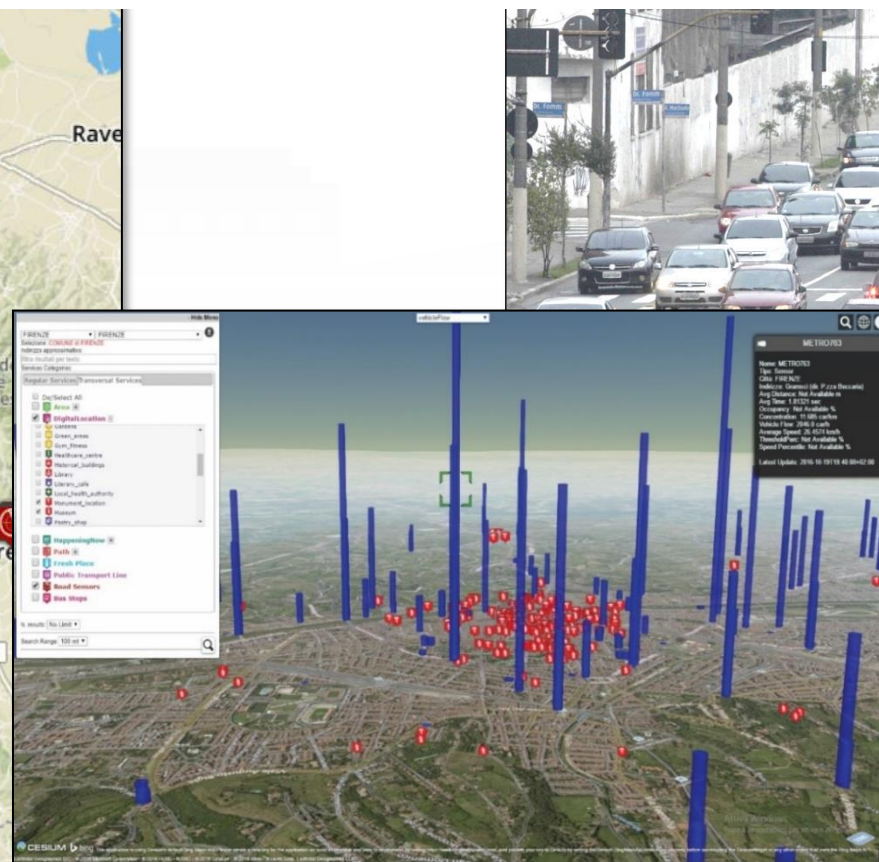

providing **PREDICTIONS** can be useful to improve quality of service

# Traffic Flow Tools

Spire and Virtual Spires (cameras), Bluetooth, ...  
Specifically located: along, around, on gates, on x...

- Day by day traffic flow, on the week data from 3 sensors

# Traffic Flow Data Analysis

Map of the traffic sensors location per cluster in Florence municipality

Hourly median vehicle flow trends per cluster

## Example of Volume of data

- Sensors: 150
- Variables per sensor: 15 + datetime, etc.
  - Bytes per sensor per message: 150 Byte
- Days per year: 365
- Hours in the day: 24
- Samples for hour: 6, one each 10 minutes
- →  $150 * 365 * 150 * 24 * 6 = 1.127 \text{ GB}$
  
- More: Platform factor: number of replicas, indexing, etc...
  - May range from 100 to 2000 Byte per Variable

# What is Data Analytics, DA and Artificial Intelligence, AI

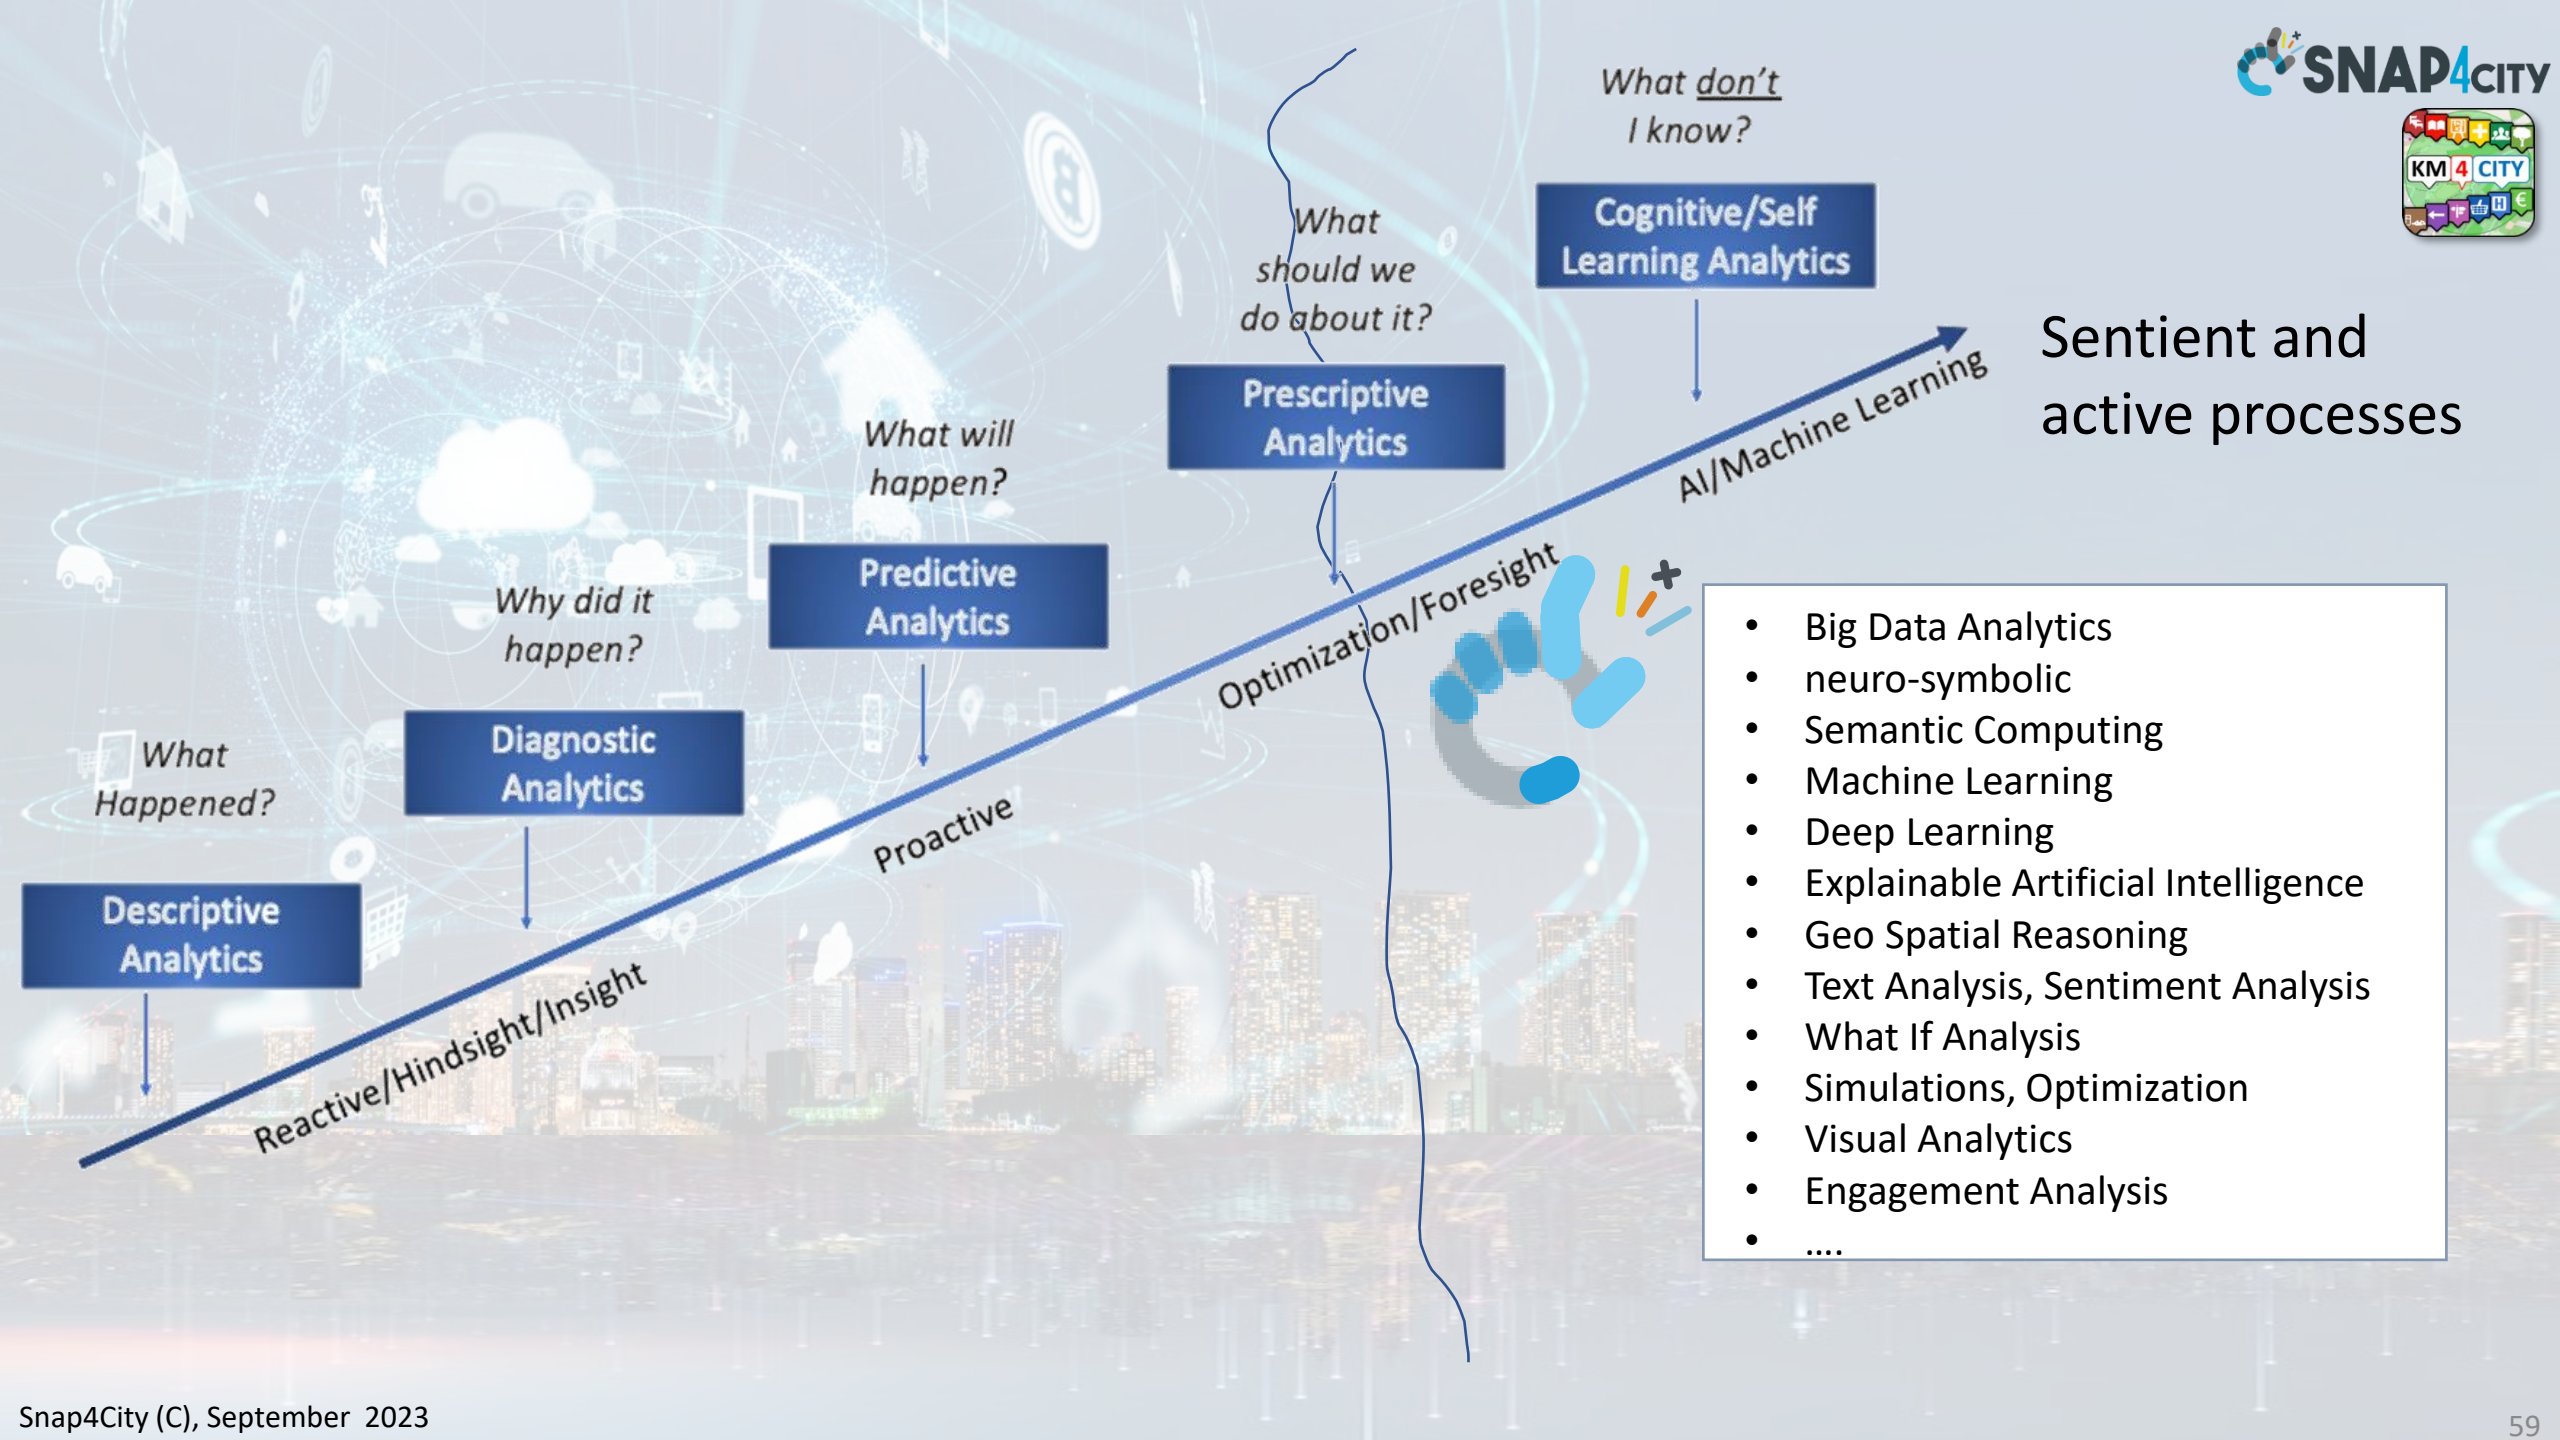

# Data Analytics

- **examining data to**
  - uncover patterns, trends, and insights that can be used to make informed decisions.
  - extracting meaningful information from data and typically involves statistical analysis, data mining, and visualization techniques.
- **Data analysts** use tools like tables, data base queries, and programming languages to process and analyze data, identify correlations, and create reports.
- ***Snap4City provides support for implementing DA on:***
  - *Proc.Logic / IoT Apps: on cloud and on Edge*
  - *Python processes in containers or on Edge*
  - *R Studio processes in containers, servers, premise, etc.*

What Happened?

**Descriptive Analytics**

Reactive/Hindsight/Insight

Why did it happen?

**Diagnostic Analytics**

What will happen?

**Predictive Analytics**

Proactive

What should we do about it?

**Prescriptive Analytics**

Optimization/Foresight

What *don't* I know?

**Cognitive/Self Learning Analytics**

AI/Machine Learning

Sentient and active processes

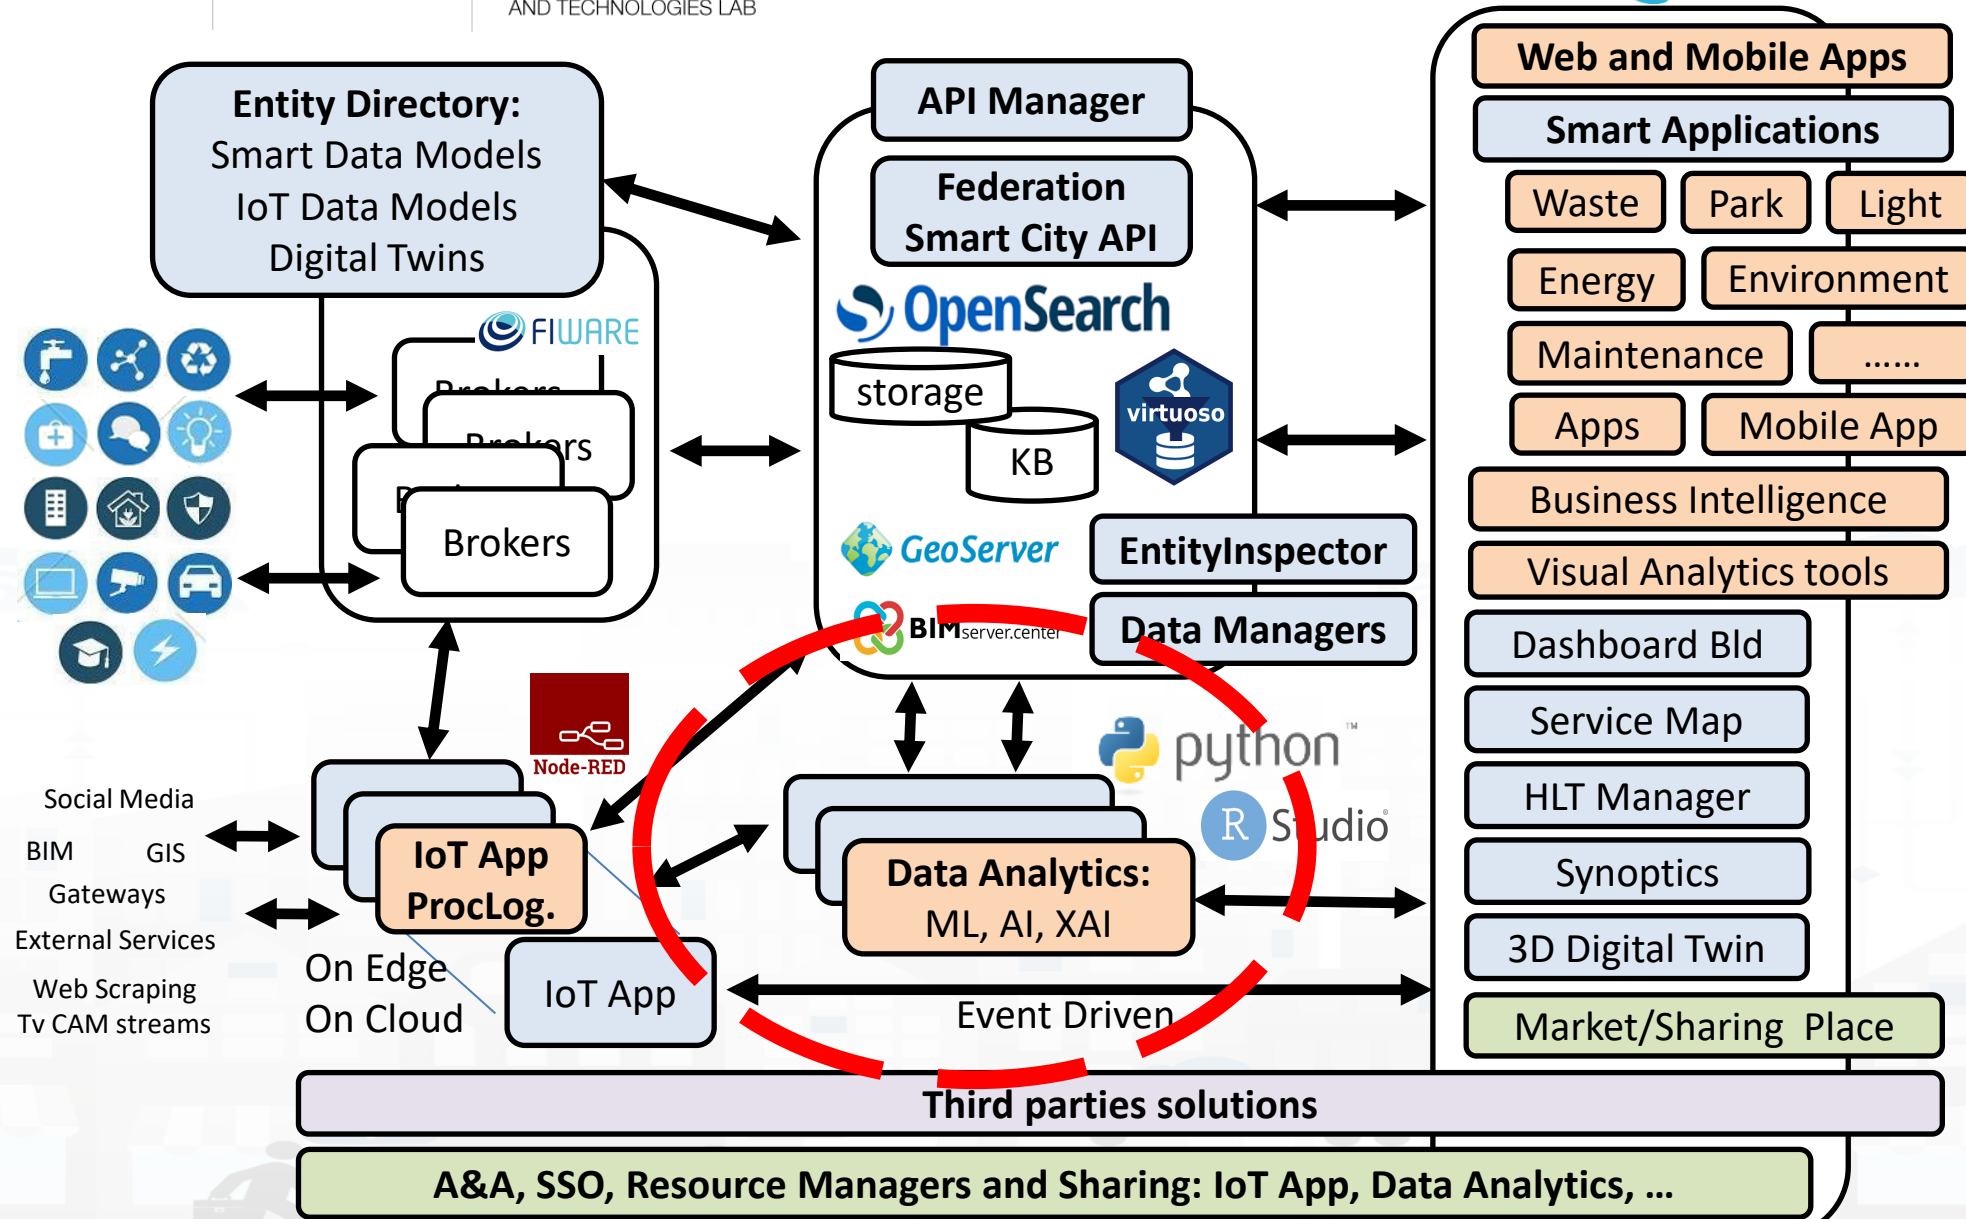

- Big Data Analytics
- neuro-symbolic
- Semantic Computing
- Machine Learning
- Deep Learning
- Explainable Artificial Intelligence
- Geo Spatial Reasoning
- Text Analysis, Sentiment Analysis
- What If Analysis
- Simulations, Optimization
- Visual Analytics
- Engagement Analysis
- ....

# Advanced Computing

- **cutting-edge technologies**, techniques, and methodologies to solve complex computational problems that are beyond the capabilities of traditional computing approaches.
  - optimization problems, pattern recognition, natural language processing
  - **Via:** artificial intelligence (AI), machine learning, high-performance computing (HPC), big data analytics, and cloud computing.
  - **On:** massive volumes of data, complex simulations, computationally intensive tasks
  - → accelerate problem-solving, and enable breakthroughs in scientific research, engineering, business intelligence, and other domains.
- ***Snap4City provides support for implementing AC:***
  - *Python processes in containers, servers, etc.*
  - *R Studio processes in containers, servers, etc.*

# Snap4City and DA and AC (summary)

- allow to create simple data processing as well as massive computing solutions exploiting statistics, machine learning, operating research, etc. for:
  - predictions, anomaly detection, early warning, OD Matrix construction, simulation, trajectories, typical trends, what-if analysis, smart routing, heatmaps, etc.
- **can be developed** in:
  - R Studio / Tensor Flow, Java, Python, ETL, IOT Applications
  - If HDFS/Hadoop/Hbase/Phoenix is installed: MapReduce, Spark, etc.
- **may be shared** with other colleagues, and organizations via the Resource Manager

- **Artificial Intelligence** usually also includes
  - Code, learn and reasoning
  - Semantic computing, Knowledge Bases
  - Neuro-symbolic reasoning
  - Decision Support Systems
  - Problem solving
- **Machine Learning** usually includes
  - Learn without coding
  - Predictions, decisions (classifications)
  - Supervised or not
  - NLP, vision, pattern recognition
- **Deep Learning** usually includes
  - Capability to learn complex patterns on huge amount of data
  - Specialized ML solutions

# Snap4 Solutions and Technologies

- **Indexes, KPI, Indicators**
- **Predictions: short, long, very long:**
  - traffic, parking, people flow, maintenance, land sliding, NO2, etc.
  - 3D Flow prediction: Pollutant (NOX, NO2, ...)
- **Anomaly detections, critical condition detection:**
  - early warning, recovery, etc.
- **Simulation and optimization**
  - Traffic Flow reconstruction
  - Routing, multimodal routing, constrained dynamic routing, etc.
  - Public transportation load
- **What-IF analysis** (simulation + predictions + data + scenarios)
- **AI: technologies: operating research, ML, AI, XAI, DL, NLP:**
  - Semantic computing, neuro symbolic
  - RF, XGBoost, BRNN, RNN, SVR, MLP, ...
  - DNN, LSTM, CNN-LSTM, Autoencoders, BERT, ...
  - Clustering: K-means, K-Medoid, ...
  - XAI: Shap, variations, Lime, ..
- **Based on several computational models:**
  - trajectories, OD matrices, Typical Time Trends, etc.

*to cope with*

- *any data, format*
- *any channel, protocol*
- *any AI/ML*
- *any place*
- *online development*
- *multi-tenant*
- *Secure, PENTest*
- *GDPR, privacy*
- **→ low costs**
- **→ easy to evolve**

<https://www.snap4city.org/download/video/course/da/>

# Lesson Learnt for Recipes

- **Data identification and finalization:**
  - Collection of data, acquisition of data from provider, construction of data
    - easy to use data or surrogated data ?
  - Data quality ?
    - To work and produce results any way even in presence of Missing and poor quality data
- **Computation Models** depending on the case
  - Statistics, Optimisation
  - Simulation and computation, or mixt
  - Identification of the most effective ML/AI techniques to obtain:
    - the best possible results with respect to the state of the art
    - reasonable results with the accessible data
    - the reasonable and cheers results compromise
  - ML/AI techniques: training and execution
- **Data Representation Models and tools**
- *Before entering into how to do it, it is better to see some examples*

# Mobility and Transport

- **Public Transportation:** Ingestion and modelling of GTFS, Transmodel, NeTex, etc. (DP)
  - Analysis of the **demand mobility vs offer transport** of according to public transportation and multiple data sources (Simulation)
  - Assessing **quality of public transportation** (analysis)
- **Accidents** heatmaps, anomaly detection (analysis, ML)
- **Predictions** for: traffic flow, smart parking, smart bike sharing, people flows, etc. (ML, DL)
- **What if analysis:** routing, traffic flow, demand vs offer, pollutant, etc. (Simulation + ML)
- **Traffic flow reconstruction** from sensors and other sources (simulation + ML)
- **Tracking fleets**, people, via devices: OBU, OBD2, mobile apps, etc. (DP)
- **Routing** and multimodal routing (multistop travel planning), constrained routing, dynamic routing (DA)
- Computing **Origin Destination Matrices** from different kind of data (analysis, DP, DP)
- Computing **typical trajectories** on the basis of tracks (analysis, ML)
- Computing Messages for Connected drive (DP)
- Slow and Fast Mobility **15 Minute City Indexes** (analysis, DP, ...ML)
- Computing and comparing traffic flow on devices and at the city border (analysis)
- **Typical time trends** for traffic flow and IoT Time series. (analysis, ML)
- **Impact of COVID-19** on mobility and transport
- Computing **SUMI, PUMS**, etc. (mainly DP)
- Etc.

# Environment and Weather

- **Pollutant Predictions: short, long and very long term** European Commission KPIs
  - NOX, PM10 pollution on the basis of traffic flow, 48 hours (ML, AI, DL)
  - Cumulated NO2 average value over the year, ..... (ML, AI, DL)
- **Computation of CO2** on the basis of traffic flows (DP), computing emission factor (DA)
  - each road for each time slot of the day
- **Prediction of MicroClimate** conditions for diffusion (ML, AI)
  - NO2, PM10, PM2.5, etc.
- **Prediction of landslides**, 24 hours in advance (AI, DL)
- **Heatmaps production**, dense data interpolation (DP) for
  - Weather conditions: temperature, humidity, wind, DEW
  - Pollutants and Aerosol: NO, NO2, CO2, PM10, PM2.5, etc.
- **Impact of COVID-19** on Environmental aspects (DP)
- Optimisation of **waste collection** schedule and paths (DP, ML)
- Computing **SDG, SUMI, PUMS**, .. (mainly DP)
- Etc.

# City Users Behavior and Social Analysis

- **People detection and classification:** persona, strollers, bikes, etc. (ML, DL)
- **people counting** and tracking, head counting (via thermal cameras, ML, DL)
- **People flows prediction** and reconstruction, (ML, DL)
  - Wi-Fi data, mobile apps data, Mobile Data, etc.
- **User's behaviour analysis, People flow analysis** from PAX Counters and heterogenous data sources (ML, AI)
  - origin destination matrices, hot places, time schedule, Recency and frequency, permanence, typical trajectory, etc.
  - Recency and frequency, permanence, typical trajectory, etc.
- **Computing User engagement and suggestions** for sustainable mobility (Rule Based, ML)
- **Social media analysis** on specific channel, specific keywords: see Twitter Vigilance,
  - Reputation, service assessment: MultiLingual NLP and Sentiment Analysis, SA
  - Tweet proneness, retweet-ability of tweets, impact guessing
  - Audience predictions on TV channels and physical events, locations
  - Prediction of attendance of events and on attractions
- **Virtual Assistant construction, LLM, NLP, Sentiment Analysis (DL, NLP)**
- **15 Minute City Index** , etc. (modeling and computability)
- Computing SDG, etc., (DP)
- Etc.

# Energy and Control, Security

- **Smart Light Solutions:** monitoring luminaries, profiling luminaries, managing error conditions (DP)
- Design by Simulation of **Photovoltaic Plants:** using real statistical data from the area (ML, Dp)
- **Energy Community:** Energy Districts (in Italy, CER) (ML, DP)
  - Monitoring, design and simulation of energy community
- Monitoring and controlling **recharging stations, recharging poles**
- Monitoring **energy production and consumption** over: plant, building, floors, offices, server rooms, etc.
- Monitoring **healthiness of Smart City Network of devices**
- Monitoring **critical areas** for: people, traffic, boats, etc.
- Etc.

# High Level Decision Support Systems

## • Management and strategies

- Estimation of KPI and local indexes
- Anomaly detection and **Early warning** computation
- **What-if analysis**, dynamic routing, origin destination matrices production from a large range of sources
- **Planning and Monitoring** renovation works via objective KPIs
- **Managing Maintenance** and teams
- **Predictive Maintenance** and costs predictions: chemical plant, vehicles, boats

## • Resilience and Risks Analysis

- **Resilience analysis** wrt European Guidelines on Resilience of critical infrastructure, and transport systems
- **Risk analysis**: natural and non natural disaster

# Low level Techniques

## • Time Series

- Time Series Anomaly detection: any kind
- Data quality assessment and control: any kind
- short and long term prediction: any kind
- Interpolation/extrapolation of Data on regular grid for calibrated heatmaps

## • Semantic Reasoning

- Ontology Modelling and integration, expert system construction
- Knowledge modelling and reasoning on RDF stores: spatial, temporal, relational

## • Matrices, Images, Maps and 3D Digital Models

- Conversion of Satellite data images into regular ground images
- Extraction information from Orthomaps, LIDAR, etc., regarding city structures
- 3D Digital Twin of Cities and Objects: pattern extraction, 3D model reconstruction

• **15 Minute City Index:**

- 13 subindexes: energy, slow mobility, fast mobility, housing, economy education, culture and cults, health, entertainment, gov, food, security...

10/22

- Monitoring and Prediction of energy consumption
- Stimulating: Bike sharing, e-bikes, car charge, etc.

- Industry 4.0 integrated solutions
- Decisions Support Systems
- Process optimization, control
- Predictive maintenance

- Smart City infrastructure: monitoring and resilience, long terms predictions
- Effective and Low cost smart solutions
- What-if analysis, Simulations
- Origin Destination matrices computation

- business intelligence tools for decision makers
- Reduction production costs
- Monitoring resource consumption
- Optimization of Waste Collection

- Monitoring and Predicting: NO2, NOX, CO2, Traffic flow, pollutant, landslide, waste, etc.
- Traffic flow reconstruction
- Demand vs Offer of Mobility analysis

- Shortening justice time
- Anonymization and indexing legal docs.
- Prediction of mediation proneness
- Ethical Explainable Artificial Intelligence

# Predictions and

# Anomaly detections

Data Analytic

# Predictions

- **Computing predictions**

- **Why?**
- **They can be always computed?**
  - Time series, time trends, seasonality, etc.
- **Which data are needed?**
- **Precision needed and precision which can be obtained?**
- **Computational costs?**

- **Technically:**

- **Time range**, in most cases they are defined such as:
  - Short: 5-15 Minutes;
  - Long: 1 day, week;
  - Mid: 30-45 minutes;
  - very long: weeks / months / years
- **Computational Model needed ?**

Management

Tactics/strategy

# Why Computing Predictions

- if I know how many people will attend an event
  - I can **detect anomalies** earlier if an unexpected event will occur, intervene
  - I can **organize** better services, cleaning and preventive security
  - I can **inform, mitigate, plan, save money and time**, etc.
- Other Cases:
  - **Traffic** → pollutant, luminaries, city plan, be prepared critical conditions
  - **Parking** → inform in advance the users, save money and time, ....
  - **Energy** → be prepared for critical conditions
  - **Pollutant** → to avoid taking taxes, planning trips, etc.
  - **Waste** → save money and time, .....

# Predictions

- **For Cases:**
  - Free parking slots
  - Free bikes, and free slots on bike racks
  - Pollutant: NOX, NO2, CO2
  - Land Slide
  - People behavior
  - Energy consumption
  - Waste production
  - Etc.
- **→ Anomaly Detections**

ACTION

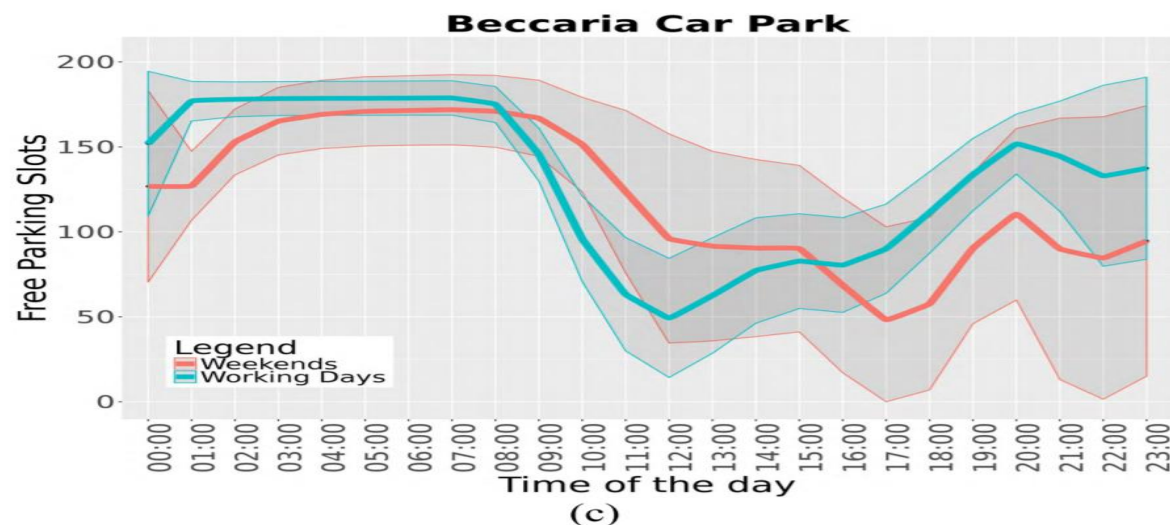

# Free Parking space trends

# Free Parking space trends

## 12 parking areas in Florence

# I would arrive to surely Park in 45 Minutes??

Category	Features	Description of features variable
Baseline features of free slot data	Free parking slots	Real number of available slots recorded every 15 minutes
	Time	Hours and minutes
	Month	Month of the year (1-12)
	Day	Day of the month (1-31)
	Day week	Day of the week (0-6)
	Weekend	0 for working days, 1 else
	Previous observation's difference (POD)	Difference between the number of free spaces at time $i$ and number of free spaces at time $(i - 15 \text{ minutes})$ recorded in the previous week
Weather features	Subsequent observation's difference (SOD)	Difference between the number of free spaces at time $i$ , and the number of free spaces at time $(i + 15 \text{ minutes})$ recorded in the previous week
	Temperature	City temperature measured one hour earlier than Time ( $^{\circ}\text{C}$ )
Traffic Sensors features	Humidity	City humidity measured one hour earlier than Time (%)
	Rainfall	City rainfall measured one hour earlier than Time (mm)
	Average Vehicle Speed	Average speed of vehicles on the road being closest to the parking, over one-hour period (km/h)
	Vehicle Flow	Number of vehicles passing by closest to the parking, over one-hour period
	Average Vehicle Time	Average of distance between vehicles, over one-hour period
	Vehicle Concentration	Number of vehicles per kilometer, over one-hour period

- «Toscana dove cosa»

# Smart Bike

## Free Bike predictions

11 SUSTAINABLE CITIES  
AND COMMUNITIES

13 CLIMATE  
ACTION

# Bike Sharing

## – Pros:

- Eco-friendly
- Prevent traffic congestions
- Reduce the probability of social contacts in public transports
- Regular bikes or e-bikes

## – Problems:

- Irregular distribution of bikes on racks/areas
- Difficulty of knowing in advance their status with a certain degree of confidence
  - available bikes at a specific bike-station
  - free slot for leaving the rented bike

→ providing **PREDICTIONS** can be useful to improve quality of service

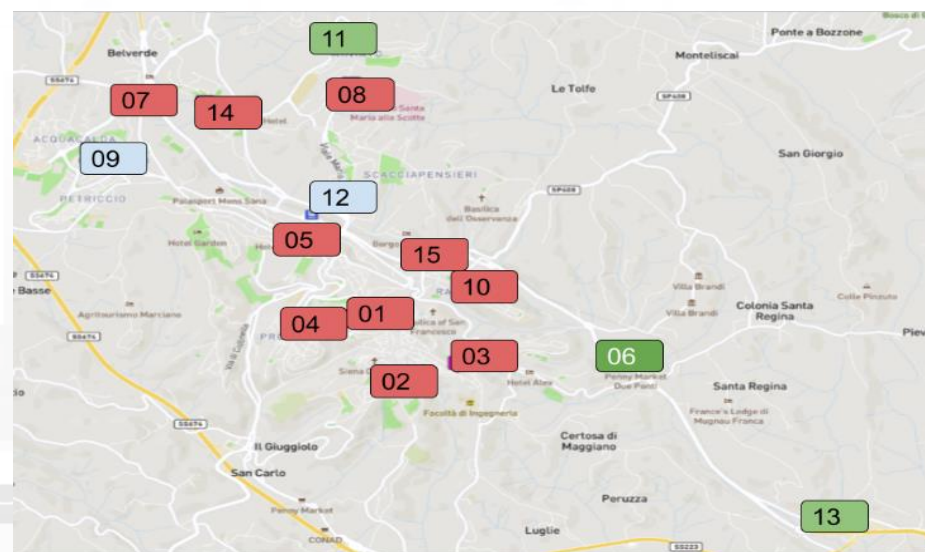

# Deep Learning for Short-Term Prediction of Available Bikes on Bike-Sharing Stations

E. Collini, P. Nesi and G. Pantaleo, "Deep Learning for Short-Term Prediction of Available Bikes on Bike-Sharing Stations," in *IEEE Access*, vol. 9, pp. 124337-124347, 2021, doi: 10.1109/ACCESS.2021.3110794.  
<https://ieeexplore.ieee.org/abstract/document/9530580>

- A **clustering** approach has been applied in order to classify Pisa and Siena stations based on their mean trend H24 of bikes availability
  - This is also correlated to the typical services in the neighbourhoods
- **K-means** clustering method has been applied to identify clusters
  - The optimal number of clusters resulted to be equal to **3**, and it has been identified by using the **Elbow criteria**

Category	Feature	Description
target	#Available Bikes	Number of available Bikes
Baseline-Historical	Time	The observation time hh-mm-ss
	month	Month of observation {1-12}
	Day Of The Week	Day of the week {1-7}
	Weekend	1 if the observation day is Saturday or Sunday, 0 otherwise
Differences Over Time	dP	the difference between the number of available bikes in the observation day (d) at the time slot t and the number of available bikes during the previous time slot (t-1) of the previous day (d-1)
	dS	the difference between the number of available bikes in the observation day (d) at the time slot t and the number of bikes during the successive time slot (t+1) of the previous day (d-1).
	PwAB	the number of available bikes of the previous week (d-7) in the same time slot (t).
Real-time weather and weather forecast	Temperature	Air temperature at the observation time, in °C
	Max Temperature	Forecast of max temperature of the observation day, in °C
	Min Temperature	Forecast of Min temperature of the observation day, in °C
	Humidity	Humidity of the hour prior to the observation time, in percentage
	Rain	mm of rain registered in the hour prior to the observation time
	Pressure	Pressure at the observation time, in millibar (mb)
	Wind Speed	Average wind speed registered in the hour prior to the observation time, in km/h
Cloud Cover Percentage	Cloud Cover Percentage at the observation time

CONV-BI-LSTM

## Clustering traffic flow sensors

- The clustering has been performed on the basis of the time trend H24, considering the normalized vehicle flow measures.
- The optimal number of clusters turned out to be 3 and it has been identified by using **elbow** criteria
- **K-means** clustering method has been applied to identify clusters
  - The optimal number of clusters resulted to be equal to **3**, and it has been identified by using the **Elbow** criteria

Best compromise

Category	Feature	Description
Traffic Trafplus	Traffic Flow	Real number of vehicles recorded every 10 minutes
	AverageSpeed	Average speed of vehicles (Km/h)
	Concentration	Number of vehicles in terms of road occupancy (%)
DateTime	timeOfTheDay	Time of the day {1, 144}
	dayOfTheYear	Day of the year {1, 366}
seasonality	dayOfTheWeek	Day of the week {1,7}
	Weekend	0 for working days, 1 else
	Year	The year of the observation
Temporal	Previous observation's difference of the previous week ( $dP$ )	the difference between the number of vehicles in the observation day (d) at the time slot t and the number of available vehicles during the previous time slot (t-1) of the previous day (d-1)
	Subsequent observation's difference of the previous week ( $dS$ )	the difference between the number of vehicles in the observation day (d) at the time slot t and the number of vehicles during the successive time slot (t+1) of the previous day (d-1).
	Previous week observation ( $PwVF$ )	the number of vehicles of the previous week (d-7) in the same time slot (t).
Weather	Air Temperature	City temperature one hour earlier than Time (°C)
	Humidity	City humidity one hour earlier than Time (%)
	Pressure	City pressure one hour earlier than Time (millibar mb)
	Wind Speed	City wind speed one hour earlier than Time (KM/h)
AirPoll	CO	Concentration of CO one hour earlier than Time
	NO2	Concentration of NO2 one hour earlier than Time
	O3	Concentration of O3 one hour earlier than Time
	PM10	Concentration of PM10 one hour earlier than Time
	PM2.5	Concentration of PM2.5 one hour earlier than Time

# Best Model for traffic flow prediction

- With a temporal target of 1h, which is the most critical short-term prediction slot ensemble learning techniques such as **Random Forest (RF)** and **Extreme Gradient Boosting Machines (XGBOOST)** are powerful techniques that must be considered for this type of problem.
- Regarding the deep learning techniques for this research project it has been proposed a new architecture **CONV-BI-LSTM** that will be compared to other solutions as **Deep Neural Network (DNN)**, **Deep LSTM**, **Deep BI-LSTM Neural Network**, **Autoencoder BI-LSTM**, and an **attention-based CONV-LSTM** to assess the research question of which will be the best AI architecture for the problem of short-term prediction of vehicle flow based on this case study.

# Analysing Features vs ML/AI Models

## Chose the best model and/or the best compromise

**Deep Learning Approach**

# Predicting Land sliding

15 LIFE ON LAND

# Landslide Prediction

Rainfall induced landslide is one of the main geological hazard in Italy and in the world.

- **Worldwide** based on the study [1] of Natural Hazards and Earth System Sciences
  - from 2004 to 2016, 55997 people were killed in 4862 non seismic landslide events worldwide
  - The same authors identified rainfall as the main the triggering factor of 79% of non-seismic landslides.
- **In Italy** based on the ISPRA report:
  - 19.9% of the Italian territory is at risk of landslides (59981km<sup>2</sup> )
  - Tuscany is among the regions with the largest areas at risk (26%)

Accurate short-term **PREDICTIONS (1 day in advance)** of landslides can be extremely important and useful, in order to both provide local authorities with efficient prediction/early warning and increase the resilience to manage emergencies.

# Scenario

- The solution and its validation have been performed by using data collected in in the area of the **Metropolitan City of Florence** with
  - 41 Municipalities
  - 3514 Km<sup>2</sup> of Surface Area
  - altitude between 100-1000 above the sea level
  - land predominantly of deciduous forests and cultivated areas
  - 1.5 M inhabitants
- The data history covers the years 2013-2019 with a total of **341** landslide events

# Prediction | Susceptibility

per municipality

dynamic hazard  
heatmaps

Useful for early  
warning systems

static + dynamic  
features

Can be computed daily

Useful for long term  
land usage planning

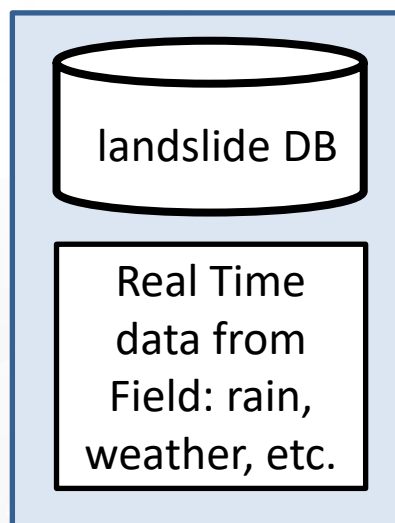

static features based

# Features as Predictors: static + dynamic data

● landslide events ▲ rain gauges ● grid

Feature	Description	Unit	Example
Date	Observation date, in the format YYYY-MM-DD	Day	2013-01-14
Latitude	Latitude of the area, EPSG:4326 format	Deg	43.86239
Longitude	Longitude of the area in the EPSG:4326 format	Deg	11.51586
Altitude	Altitude of the area	m	467.204
Slope	Acclivity of the area	%	45.942
Vegetation	Vegetation of the area	%	0.262
Ground	Soil type at the event site (class UCS)		223-Oliveti
Day1	Rainfall on the day before the observation	mm	12.453
Day3	Rainfall on the 3 days preceding the observation	mm	15.072
Day15	Rainfall on the 15 days preceding the observation	mm	16.160
Day30	Rainfall on the 30 days preceding the observation	mm	51.515
Temperature	Mean Temperature on the observation day (IIMeteo.it)	°C	6.965
MinTemperature	Minimum temperature on the observation day (IIMeteo.it)	°C	2.99
MaxTemperature	Maximum temperature on the observation day (IIMeteo.it)	°C	9.942
Humidity	Humidity (average) on the observation day (IIMeteo.it)	%	92.96
WindSpeed	Average wind speed on the observation day (IIMeteo.it)	Km/h	5.991
VelMedSIR	Average wind speed on the observation day (SIR)	m/s	0.9
VelMaxSIR	Maximum wind speed on the day of observation (SIR)	m/s	1.8
LevelSIRFre	phreatimetric data on the observation day (SIR)	m	-4.34
LevelSIRldr	Water (river) level recorded on the observation day (SIR)	m	0.8
PrecipSIR	Precipitation on the observation day (SIR)	mm	0
MinTempSIR	Minimum temperature on the observation day (SIR)	°C	0.5

# Data Analytic Solutions

- Aiming at creating an early warning can be traced back to the estimation of areas presenting a **high probability** of landslide event occurrence in the **next day**, as in this case.
- On the basis of the above-described dataset, a number of techniques to predict landslide events has been tested:
  - Random Forest, **RF**
  - eXtreme Gradient Boosting, **XGBoost**
  - Convolutional Neural Network, **CNN**
  - Autoencoders, **AE**
  - decisional algorithm **SIGMA**

# Comparing Predictive Model Architectures

- The considered dataset is composed of about 9 million estimations, among which 2342 positive events (labeled with Value = 1)
- The dataset was divided into two groups: training set (80%) and test set (20%)

TABLE III COMPARISON OF RESULTS OBTAINED USING MODELS FOR SHORT TERMS PREDICTION OF LANDSLIDES, BEST RESULTS IN BOLD.

Global Explainable AI  
- Feature relevance

- Red: positive, blue: negative;  
- vs intensity and impact

# Local Explainable AI - understanding the single event

- The local explanation puts in evidence the features which provided major contribution to the prediction
- For example considering Figure 10a, the value of VelMaxSIR, MaxTempSIR, Day3 and Humidity contributed significantly to the classification of the observation as a **landslide event**

**FIGURE 10. Local feature relevance via SHAP, as interpretation of events in terms of feature values: (a) and (b) are events with predictions of landslide, (c) a no landslide event.**

# Local Explainable AI - understanding the single event

The trends of the SHAP values of the most relevant features have been plot with respect to the time/days.

It can be noted that in coincidence of the day before the event, most of the SHAP values of the relevant features assumed a relevant value at the same time. And in particular for this event: **LevelSIRldr**, **Day3** and **MaxTempSIR**.

**FIGURE 11.** Time trend of SHAP values of most relevant features around the landslide event of 21-12-2019: values estimated by using data collected in the neighboring area of the event.

- **The problem of landslide event prediction** has been addressed, for early warning specific to the case study in the Metropolitan City of Florence, using
  - static land description,
  - dynamic features as rain fall, temperature, wind, etc.
- **Numerous AI solutions has been compared**
  - the best performing architecture has been XGBOOST
- **XAI: based on Shapley** additive explanation (SHAP), global and local, derived relevance:
  - rain the last 3 days, max temperature in the previous day, lever of water in the river
  - land static features are preconditions for landslide, while they are not efficient in creating an early warning system.
- **Computationally:** predictions can be assess every day,
  - susceptibility map usually are computed 1 or two times per year.
- **Prediction** models can prevent disaster
  - susceptibility map are mainly used for taking decision on planning.

- **routing**, multimodal, constraints, ..
- **decision scenarios**, ....
- etc.

**SNAP4CITY**  
- Digital Twin Global - Fire  
demonstrator

# Why computing Higher Level Types

- They are a more **direct representations for the decision makers**
  - fast awareness of the situation
  - fast reaction and decision making
- **High Level Types and their representations**
  - Traffic Flow and animations
  - Heatmaps and animations
  - Origin Destination Matrices, ODM; and animations
  - Trajectories, ....
  - Digital Twin and 3D digital representation of the city
  - User behavior representation
  - Typical trends, different time spam
  - etc.

TOP

# Traffic Flow Reconstruction from Traffic Sensors Data

**11** SUSTAINABLE CITIES  
AND COMMUNITIES

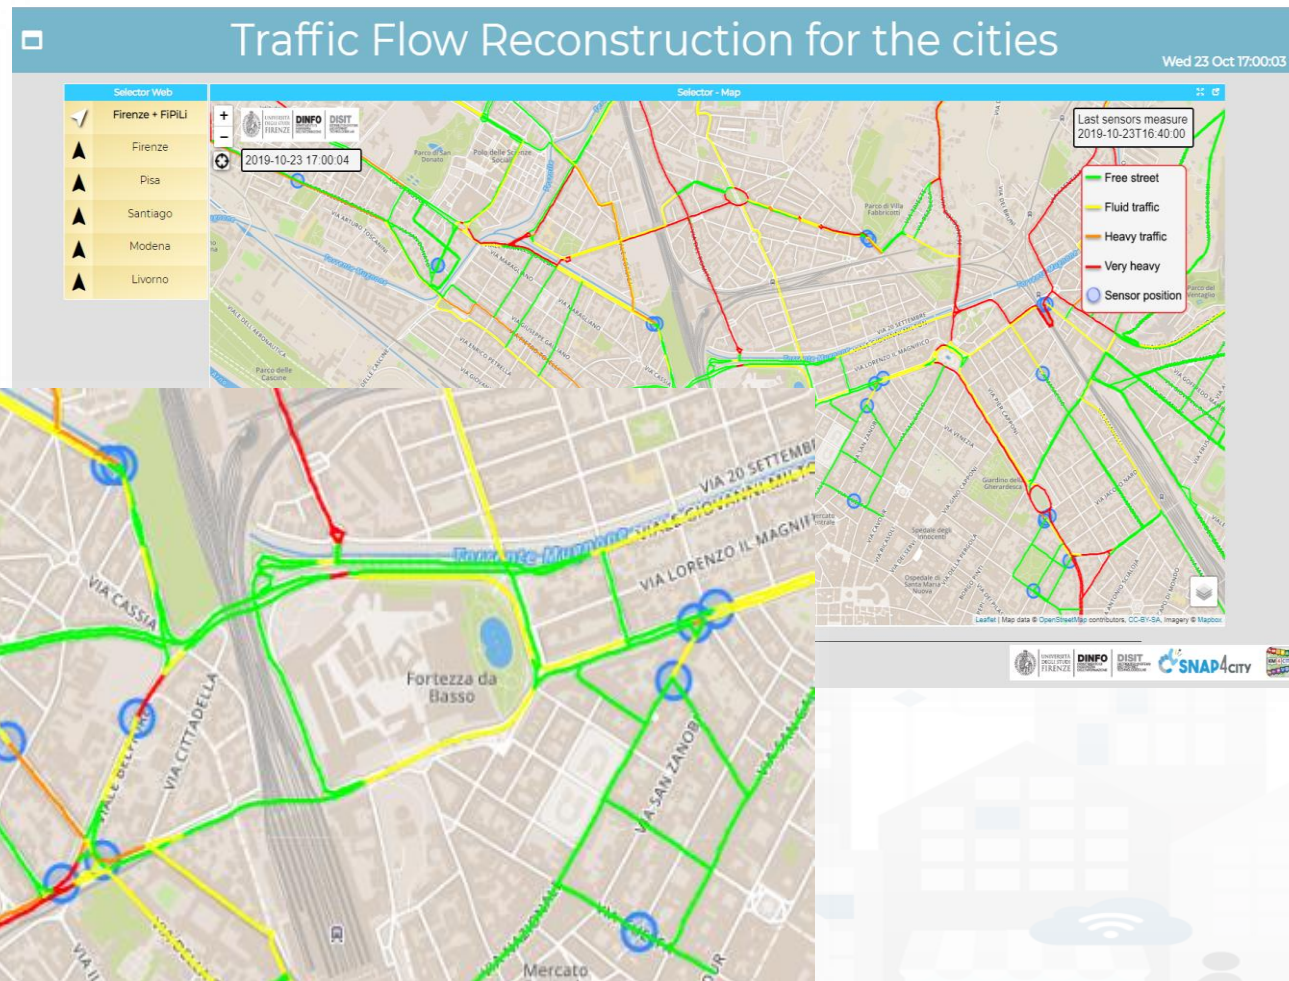

**13** CLIMATE  
ACTION

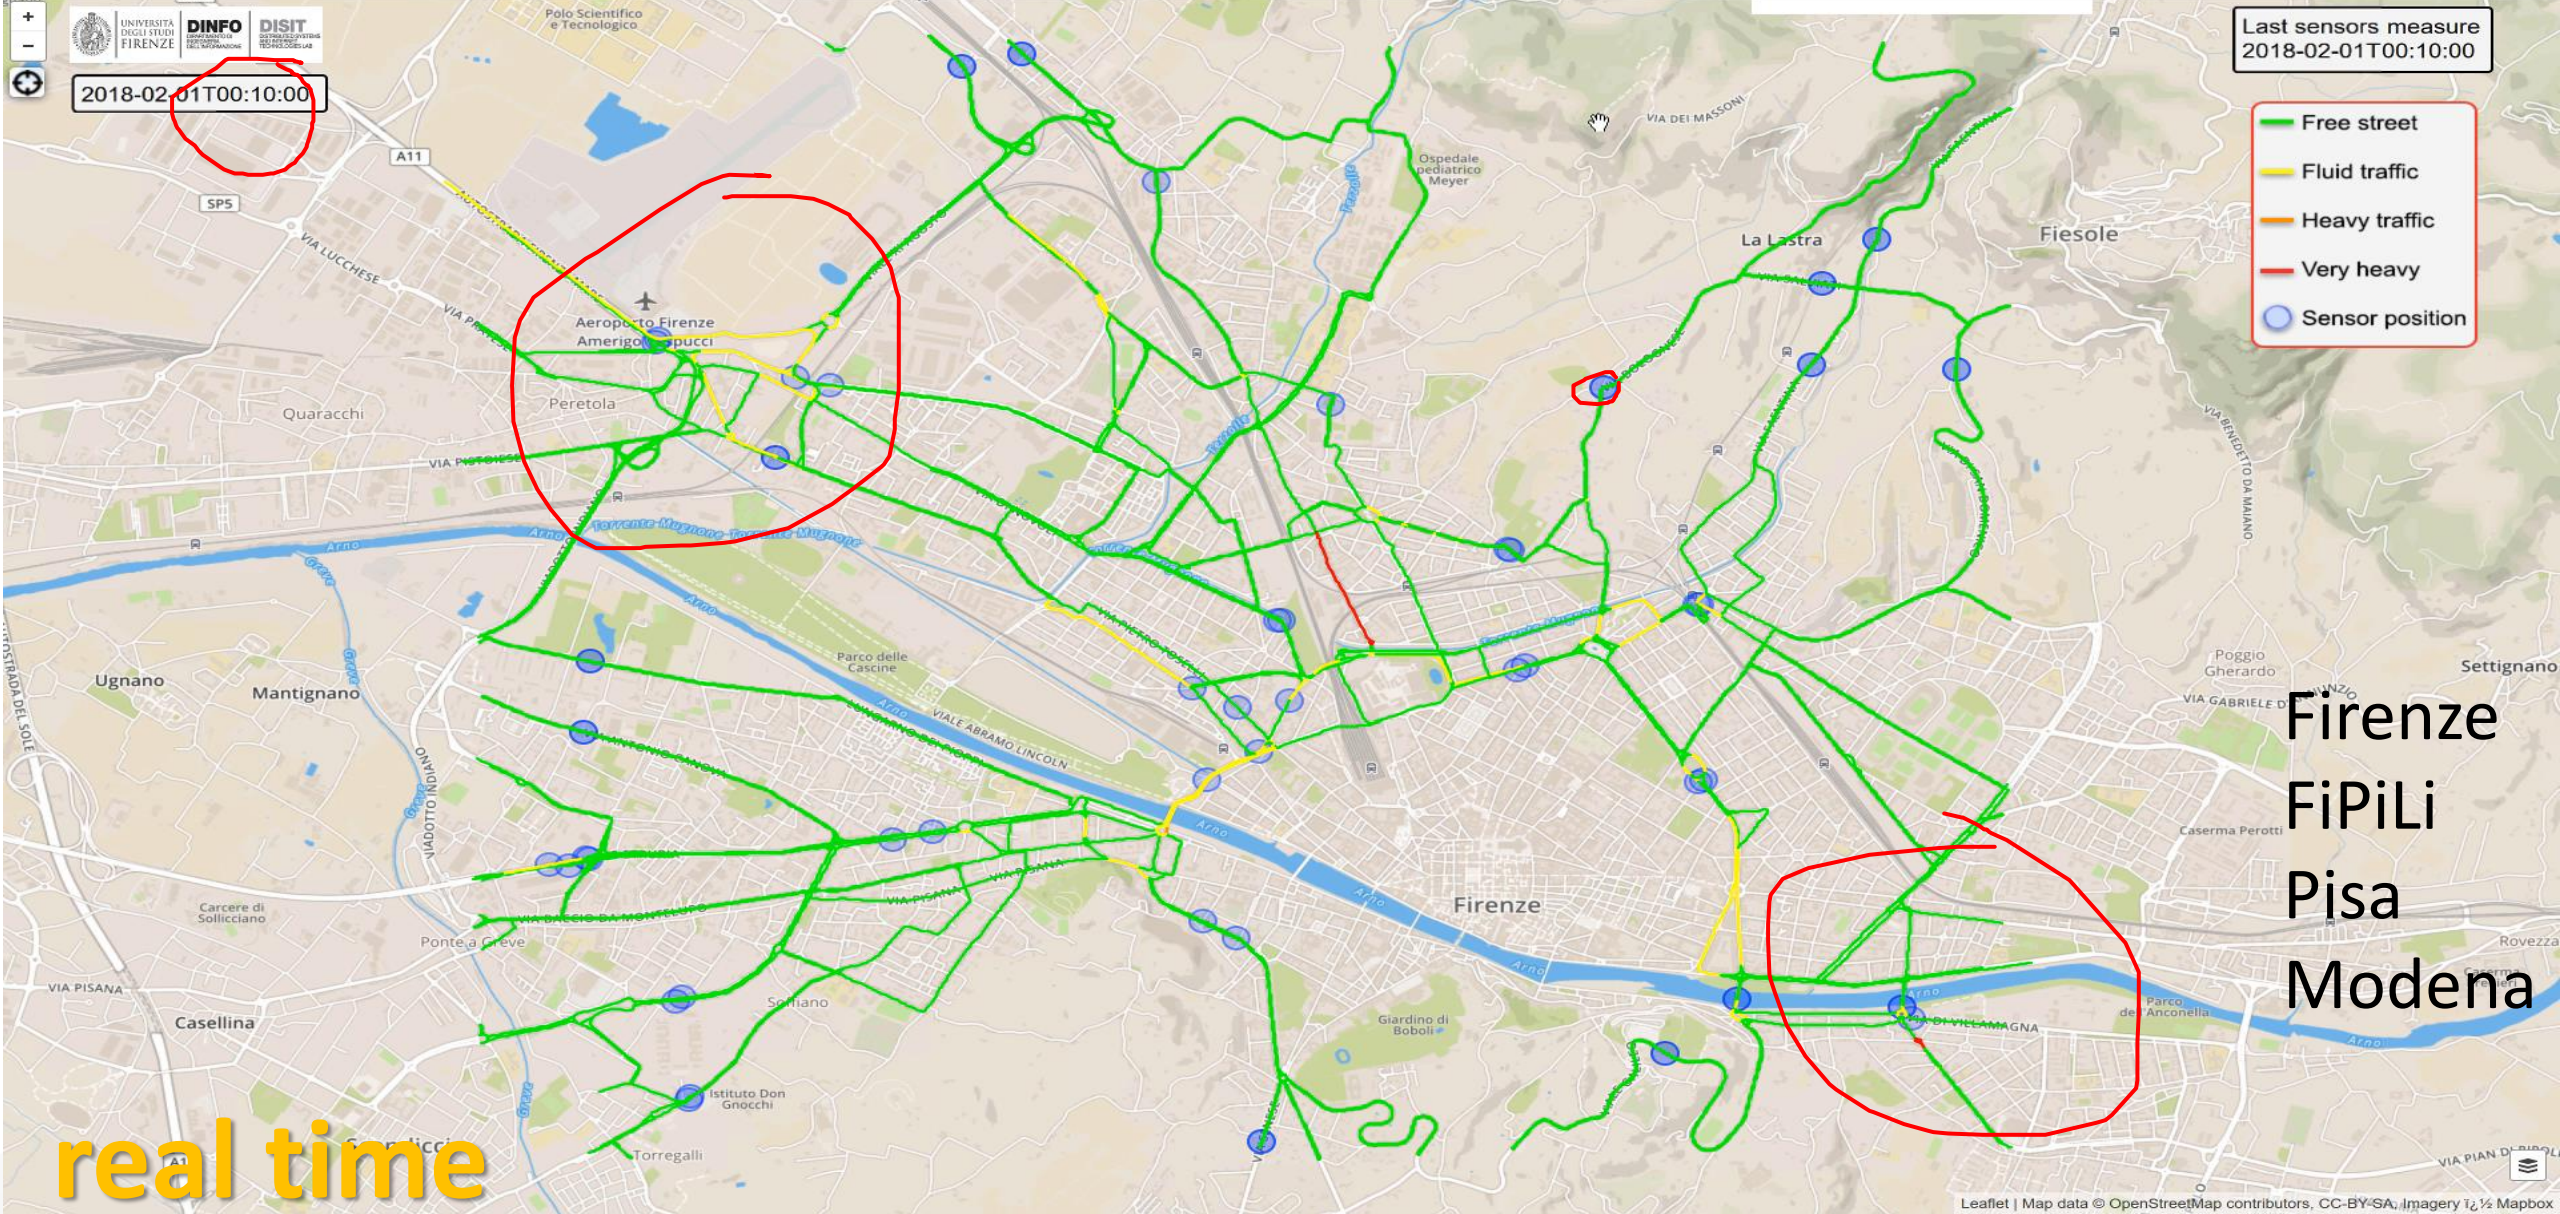

# Why Dense Traffic Flow Reconstruction ?

- Making decision on mobility and transport solutions → what if analysis
- Controlling pollution
- Dynamic Routing for Firebrigade, Ambulances, general public
- Planning Public Transportation routing

# How it works: Traffic Flow Manager

# Heatmaps and animations

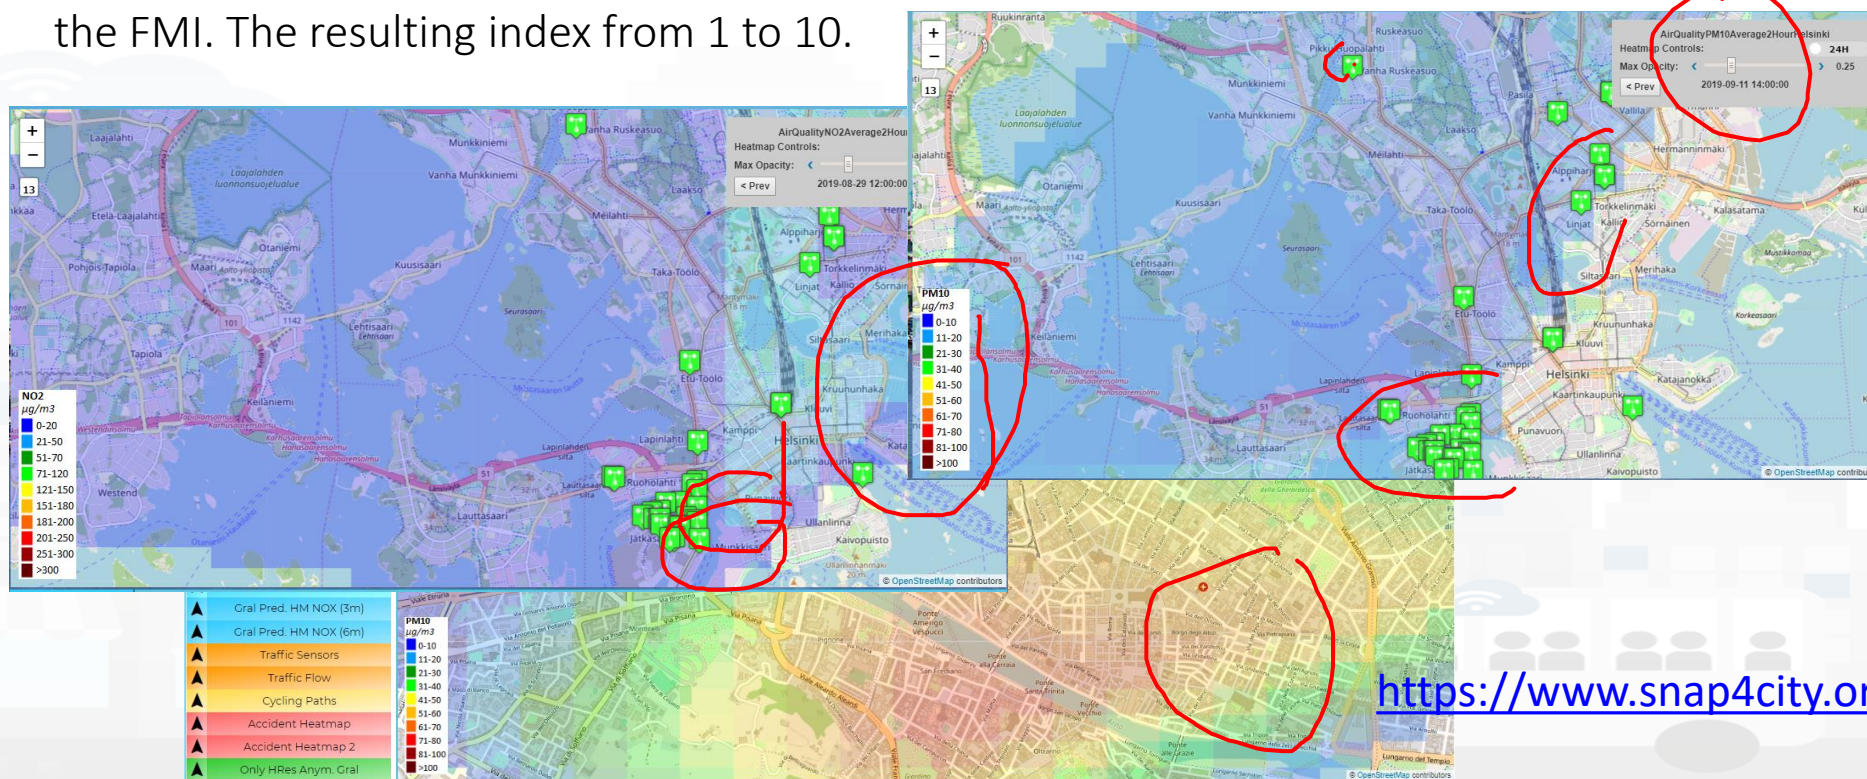

- **Air Quality sensors are**
  - Collected on scattered positions
  - Not all sensors have full set of data, complexity of computing AQI
- **AirQuality Services**
  - AirQuality indicators independent on the sensors' position, in any GPS position of the area
  - **Multiple data:**  $PM_{10}$ ,  $PM_{2.5}$ ,  $CO$ ,  $CO_2$ ,  $SO_2$ ,  $O_3$ ,  $H_2S$ ,  $NO$ ,  $NO_2$ ,  $NO_x$ , air temperature, air humidity, velocity of wind speed, dew point, etc.
- **Applications**
  - Control Room Rendering
  - Alerting on specific personal GPS locations
  - Constrained routing for: runners, walking with baby, people with pulmonary problems,
  - Mobile Phone Rendering, this means to have thousands of users active at the same time, and a reasonable memory consumption in the server.

# Environmental Real Time Measures

- **Noise:** real time noise levels (measured in dBA).
- **PM<sub>10</sub>:** real time pollutant levels in air in terms of PM<sub>10</sub> (measured in  $\mu\text{g}/\text{m}^3$ ) particles.
- **PM<sub>2,5</sub>:** real time pollutant levels in air in terms of PM<sub>2,5</sub> (measured in  $\mu\text{g}/\text{m}^3$ ) particles
- **NO<sub>2</sub>:** real time pollutant levels in air in terms of nitrogen dioxide (measured in  $\mu\text{g}/\text{m}^3$ ).
- **Air Quality Index (AQI):** real time air quality index of the Helsinki area, provided by the FMI. The resulting index from 1 to 10.

# The GRID density is never enough

4x4 meters grid is really too expensive

1000x1000 area (small town)

$4 \times 4 \text{ mt} * 10 \text{ variables} * 24 \text{ hours per day}$

$\rightarrow$  3.8 Billions of data

# AQI Indexes estimation via R studio and IOT App

## European Air Quality Index **EAQI**

<http://airindex.eea.europa.eu/>

Pollutant	Index level (based on pollutant concentrations in $\mu\text{g}/\text{m}^3$ )				
	Good	Fair	Moderate	Poor	Very poor
Particles less than 2.5 $\mu\text{m}$ ( $\text{PM}_{2.5}$ )	0-10	10-20	20-25	25-50	50-800
Particles less than 10 $\mu\text{m}$ ( $\text{PM}_{10}$ )	0-20	20-35	35-50	50-100	100-1200
Nitrogen dioxide ( $\text{NO}_2$ )	0-40	40-100	100-200	200-400	400-1000
Ozone ( $\text{O}_3$ )	0-80	80-120	120-180	180-240	240-600
Sulphur dioxide ( $\text{SO}_2$ )	0-100	100-200	200-350	350-500	500-1250

Measurements of up to five key pollutants supported by modelled data determine the index level that describes *the current air quality situation at each monitoring station*.

The index corresponds to the poorest level for any of five pollutants according to the following scheme.

## Legend of Environmental data:

<https://www.snap4city.org/435>

## Common Air Quality Index **CAQI**

<http://www.airqualitynow.eu>

Qualitative name	Index or sub-index	Pollutant (hourly) density in $\mu\text{g}/\text{m}^3$			
		$\text{NO}_2$	$\text{PM}_{10}$	$\text{O}_3$	$\text{PM}_{2.5}$ (optional)
Very low	0-25	0-50	0-25	0-60	0-15
Low	25-50	50-100	25-50	60-120	15-30
Medium	50-75	100-200	50-90	120-180	30-55
High	75-100	200-400	90-180	180-240	55-110
Very high	>100	>400	>180	>240	>110

The index is defined away from roads (a "background" index). **CAQI** is computed on the basis of  $\text{NO}_2$ ,  $\text{PM}_{2.5}$ ,  $\text{PM}_{10}$  and  $\text{O}_3$ .

# Origin Destination Matrices

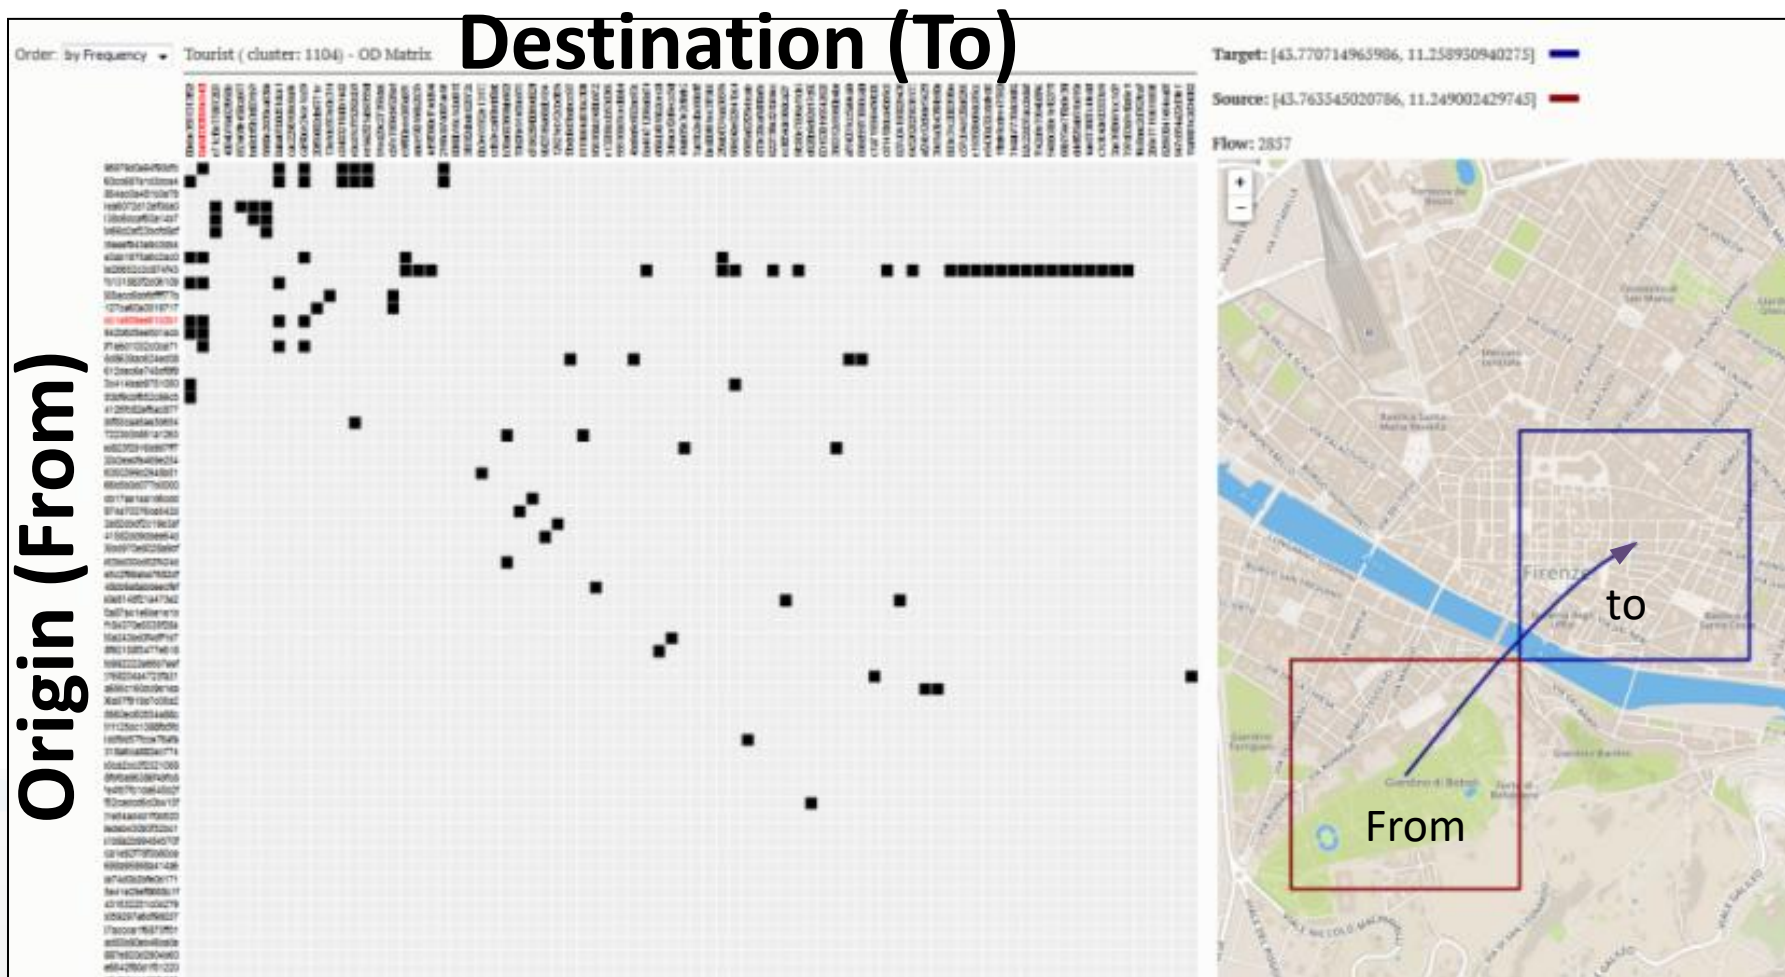

- **computed** from several kinds of data
  - Census Data
  - Cellular Mobile Data
  - Mobile App Data **trajectories**
  - OBU from vehicles **trajectories**
  - Composition of multiple sources: ODM + Trj
- **may represent:**
  - Demand of mobility
  - Offer of transportation
- **refer** to different area kinds for Origin and of Destination
  - Different kinds of OD areas
  - Different kinds of temporal resolutions → animations
    - Hourly, daily, weekly, monthly, etc...

# OD Matrices, ODM

- Origins and destinations
  - Any area of the zone
  - From to
  - To from
- By inflow or outflow
- By temporal slice
  - Hour, day,...
  - Series by hour, day, etc.
- By user profile:
  - Age, nationality,
  - Commuter, citizen, etc.
- By motivations
- By travel means:
  - car, bike, walk..
- By extraction technique
- By civic area VS segmented GPS area
- ....

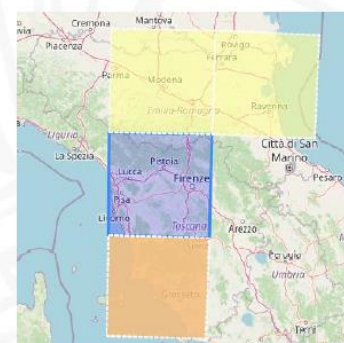

# Different Origin Destination Matrices

- Get specific value
- Time window
- Opacity
- Animation
- Inflow/outflow
- Sequence of OD matrices: next/prev

# Global City Digital Twin

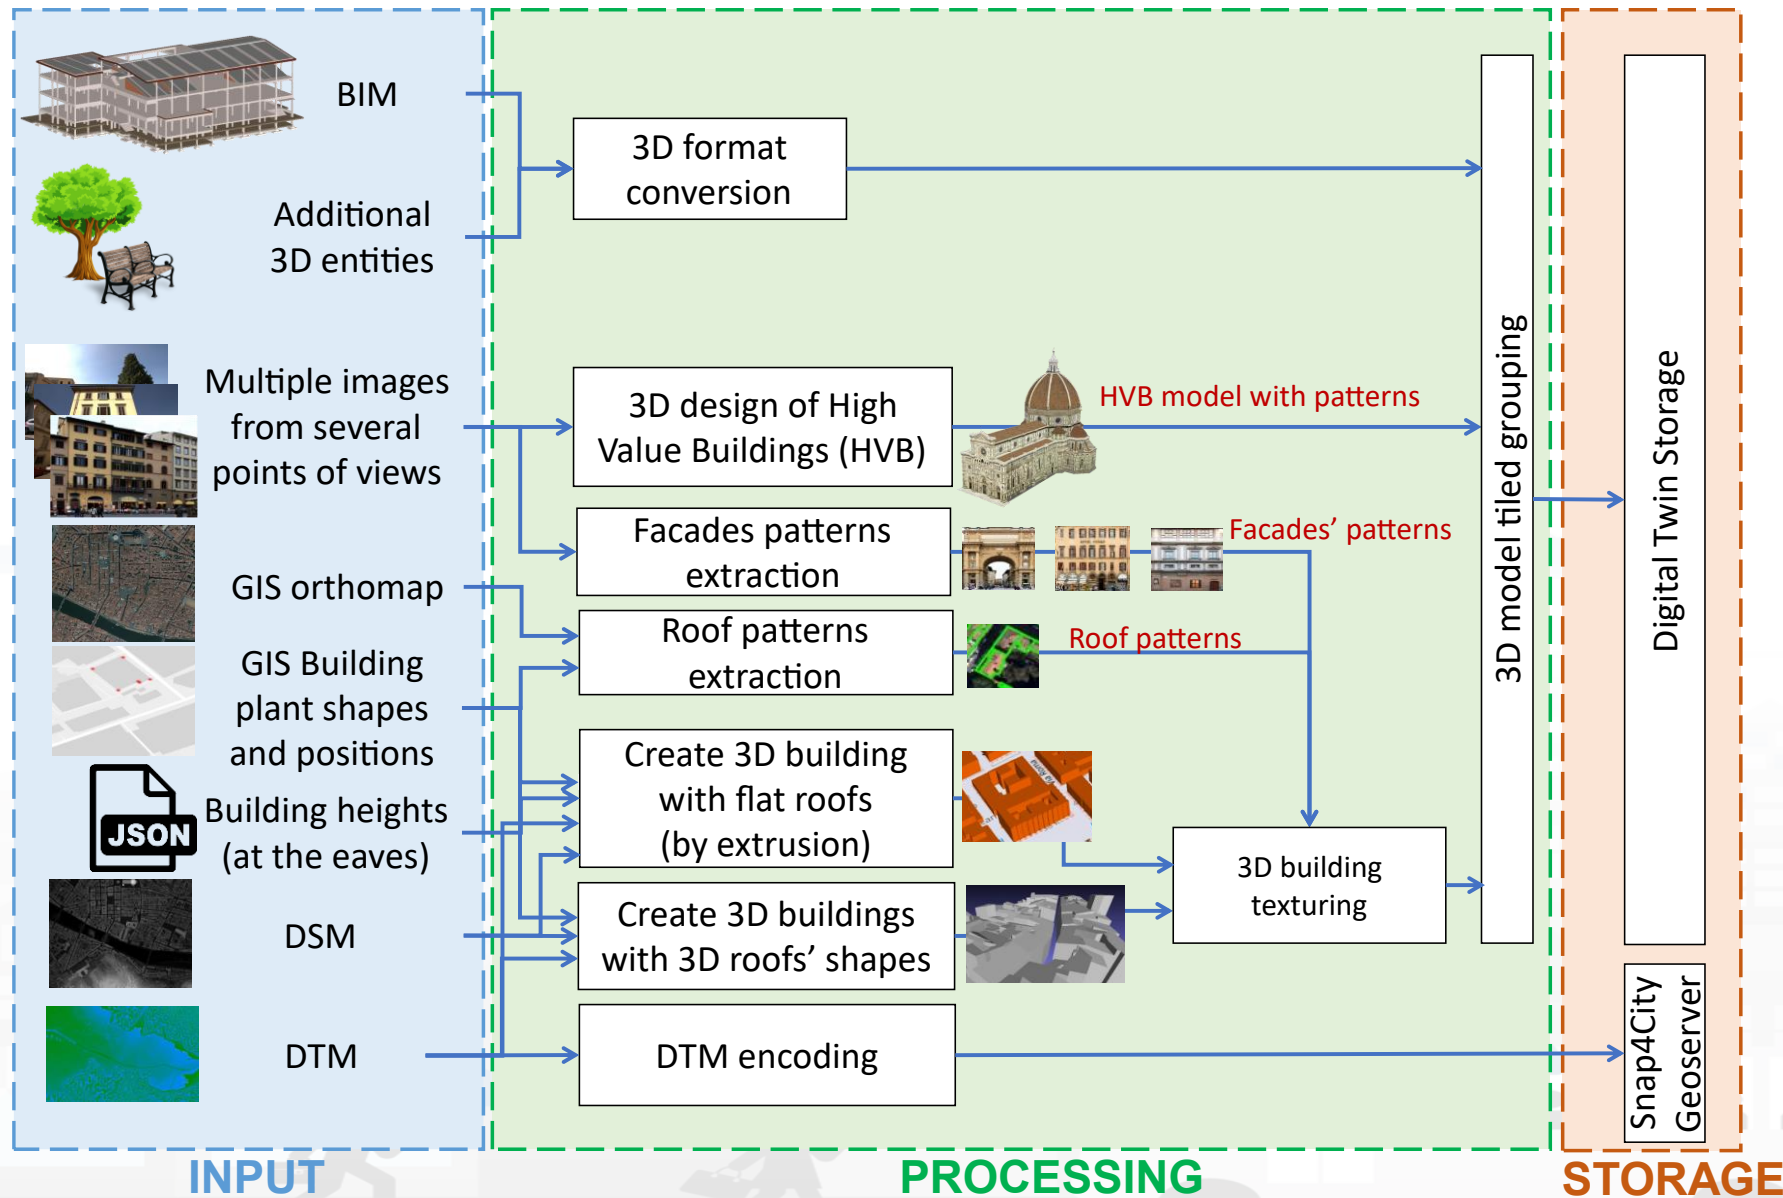

- **Real Time Rendering Maps with 3D City Digital Twin**
  - Full control:
    - pan, zoom, tilt, rotation, etc.,
    - simulation of light conditions: over the daylight and night
    - Plus Full control with right button and wheel of the mouse
  - Full control of pre-setting for direct show specific condition when loading
  - Section modality to pick the single Building or part of it, and to start a navigation towards other views, via relationships managed by an IoT App of reference
- **3D City Construction is an comprehensive and scalable process**

# Dyamic Routing in 3D space

# Interacting with 3D City Digital Twin

- You can see in the 3D model
  - Terrain model defining the level of the terrain and of the building
  - Generic Buildings, high value buildings, HVB (e.g., Dome, Palazzo Vecchio, etc.), facades, roofs, etc.
  - Sky pattern: sun, cloudy, etc.
  - Orthomaps below the buildings, by selection
    - temperature, traffic, pollutant
  - Cycling paths and other shapes, polylines
  - Traffic Flows: as crests shaping the traffic flow density in high and color according to color map
  - POI, Sensors: PopUps to see real time data
  - Pillars reporting in 3D the values of specific sensors: temperature, traffic flow, people counting, pollutant, etc.

# Automated Classification of Users' Transportation Modality in Real Conditions

## Variables taken into account:

- **Day/Time Baseline and GPS:**
- **Accelerometer**
- **Proximity**
- **Temporal window**

## Four combinations of the different categories of data:

1. Baseline features and distance feature
2. Baseline, distance feature and accelerometer features
3. Baseline, distance feature and temporal window features
4. Baseline, distance, accelerometer, temporal features together

## Dataset:

- 30K observations
- 25 variables
- 38 different users
- 30 different kinds of devices
- 4 classes (Stationary, Walking, Private Transport, Public Transport)

Note that, *each user have used the mean of transport of his/her own preference.*

When the mode of transport is changed, the user was asked to notify the change to the App for creating the learning set and for validation.

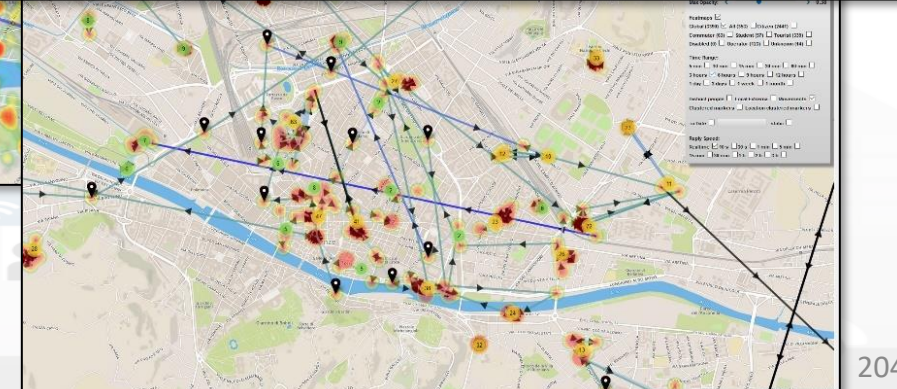

# Feature relevance

Model features categories	Extra Tree Model results

**11 SUSTAINABLE CITIES AND COMMUNITIES**

# Typical Time Trends

**11** SUSTAINABLE CITIES  
AND COMMUNITIES

**13** CLIMATE  
ACTION

# Typical Time Trend

- They:
  - need to be computed in advance on the basis of a Time Serie variable, and a reference period of computation.
  - represent typical trends of: min, max, average, median
  - You can change the data on view
- Formats:
  - **DayHour**: 7 time trends, one for each day of the week, each hour, 24 values.
    - As DayView or WeekView, start monday
  - **MonthDay**: a value per day, 30 values of the month.
  - **MonthWeek**: a value per day aligned to week days: 28 values, 4 weeks.
    - 1<sup>st</sup> Monday of the month
    - 3<sup>rd</sup> Friday, etc.

<https://www.snap4city.org/dashboardSmartCity/view/index.php?iddashboard=MzA4NA==>

- **MonthDay:**

- a value per day,
- 30 values of the month.
- Aligned from the first day of the month
- computed on the basis of a Time range: from-to including that date
  - e.g.: 2 months
  - As min, max, average, median
  - You can change the data on view

## • MonthWeek:

- a value per day,
- 30 values of the month.
- Aligned from the first Monday of the first week of the month
- computed on the basis of a Time range: from-to including that date
  - e.g.: 2 months
  - As min, max, average, median
  - You can change the data on view

# Development Life Cycle Smart Solutions

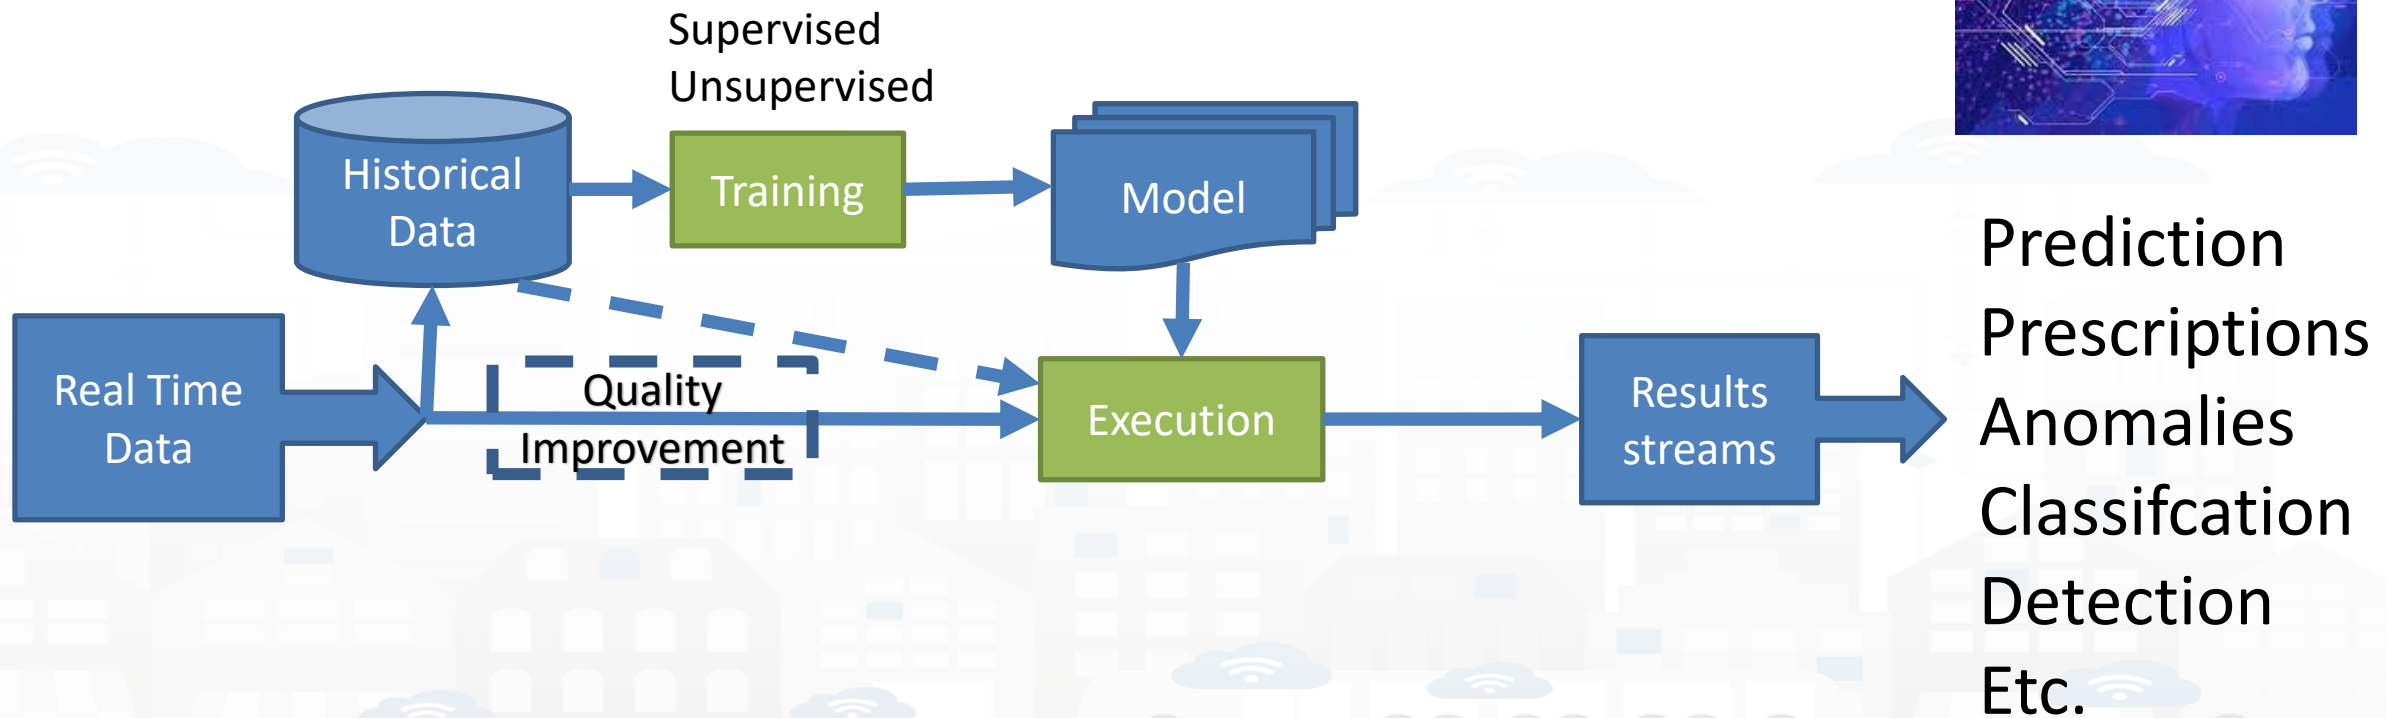

# Data Analytics Life Cycle

- **Problem analysis**, business requirements
- **Data Discovery**, Data Licensing, ingestion, and acquisition
- **Data set preparation**, transformation, identification of features, normalization, scaling, imputation, feature engineering, etc.
- **Target Assessment Model Definition**
  - Identification of metrics for the assessment, KPI
- **Screening on Models/Techniques, for each Model/Technique or for the selection Model/Technique** perform the
  - *Model/Technique Development/testing , also hyper-parametrization*
- **Best Model selection among those tested**
  - If needed reiterate for different parameters, features, etc.
  - Comparison with state of the art results on the basis of KPI/metrics
  - Needs of Explainable AI solutions: global and local
- **Deploy best Model in production, monitoring in production**

# Simplified Training and Deploy process

# Model/Technique Development/testing

- **Identification of Process goals and Planning**
  - Which goals
  - How to compute, which language
  - Which environment, which libraries
- **Data Discovery and Ingestion (from the general life cycle)**
- **Data Analysis: feature engineering, feature selection**
- **Data review and preparation for the model**
- **Model Identification and building: ML, AI, etc....**
  - Training
  - Tuning hyperparameters when possible
- **Model Assessment and Selection**
  - Validation in testing
  - Assessment on a set of metrics depending on the goals: global relevant and feature assessment
  - Assessing computational costs
  - Impact Assessment, Ethic Assessment and incidental findings
  - Global and Local Explanation via Explainable AI techniques
- **Model Deploy and Final Validation**
  - Optimisation of computation cost for features, if needed reiterate
- **Solution on Production (security, scalability, etc.)**

# Simplified Deploy of Transfer Learning Model

# *AI/ML Requirements*

# AI/ML desired requirements

- **Reliable:** capable to produce results in reliable manner, repeatable in operative conditions
- **Trustworthy:** capable to behave such as your best expert, that you can trust
- **Not Biased:** not influenced by some preconcept neither based on some data that can structurally for definition influence the decisions/results!
  - Identified **Goals** of the model can be biased (e.g., approach the solution logistically or predicting a value)
  - **Data Set** for training can be biased (e.g., including variables which can discriminate wrt law/regulations)
  - **AI architecture** can be biased (e.g., selecting one that can see only a specific aspects, reducing the solution space, not addressing non linearity, preprocessing data losing a part of information),
- **Ethical:**
  - **Data Ethics:** to address the ethical non bias aspects on data
  - **AI Ethics (DA Ethics):** to address the ethical non bias aspects on Data Analytics process from training, to model selection and assessment
  - **Incidental Finding:** what happen if the results or partial results provide hints on unexpected aspects
  - Etc....
- → → **AI Regulation of EU Act, AI Act:**
  - <https://digital-strategy.ec.europa.eu/en/policies/european-approach-artificial-intelligence>

# Data Analytics vs Data Law

- **Respect Data Sovereignty:**
  - data are subject to the laws and governance structures of the nation (*Jurisdiction*) where they were collected
  - Specific licenses can be modelled and the development tools enabling the development of AI must guarantee
- **Privacy, Respecting GDPR in Europe, other Acts on other countries:** a set of guidelines and techniques
  - **Anonymization:** several kind of approaches, from drastic to those that preserve the: statistical validity, semantics, etc.
  - **Encryption:** of personal data
  - **Decoupling** of data and personal identification data
  - **Channel protection:** SSL, TLS, etc.
  - **Signed Consent:** not any more of Informed Consent, signed per data type
    - Usage of data have to be provided by the user, for each single data type
  - **Data Types:** any kind of user's data, which could be exploited , reused, sold, etc.
  - Any **data start as private** data.

# AI Explainability

- **Global Explainability, GE**

- Given the features adopted in some ML/AI solution, the GE is a description of relevance or importance of those features in the production of all the results.
- The Relevance/Importance is estimated by taking into account the typical impact/incidence of features values on the estimation of results (prediction, classification, etc.)

- **Local Explainability, LE**

- Given the features adopted in some ML/AI solution, the LE is a description of relevance or importance of those features in the production of a specific result, by case.
- The LE Relevance is estimated by taking into account the specific impact/incidence of a feature value on the estimation of a specific result (prediction, classification, etc.)

- **A number of tools can be used for example:**

- SHAP, Shapley Additive Explanations

# XAI: Explainable artificial intelligence

**Explainable artificial intelligence (XAI)** is a set of processes and methods that allows human users to comprehend and trust the results and output created by machine learning algorithms.

# White Box vs. Black Box Models

A **white-box** model is explainable by design. Therefore, it does not require additional capabilities to be explainable:

- Linear regression,
- Logistic regression,
- Decision Tree,
- Naive Bayes,
- KNNs
- .....

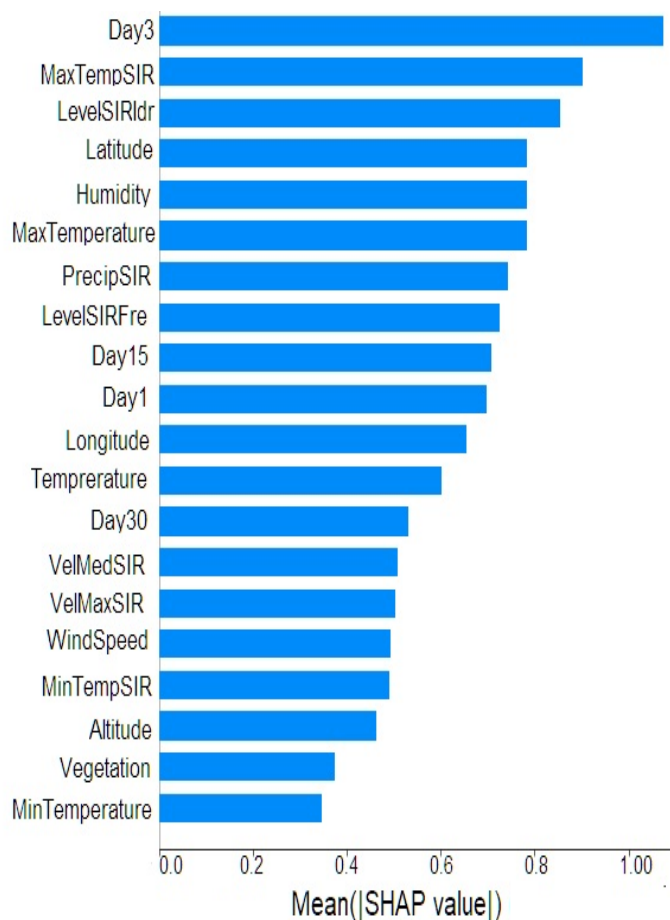

A **black-box model** is not explainable by itself. Therefore, to make a black-box model explainable, we have to adopt several techniques to extract explanations from the inner logic or the outputs of the model.

- CNN, DNN, ...
- LSTM
- .....

```
with tf.device('/device:GPU:0'):
    explainer = shap.TreeExplainer(MODEL)
    shap_values = explainer.shap_values(X_train)
```

# SHAP Global interpretability

```
shap.summary_plot(shap_values,
features_names, plot_type="bar")
```

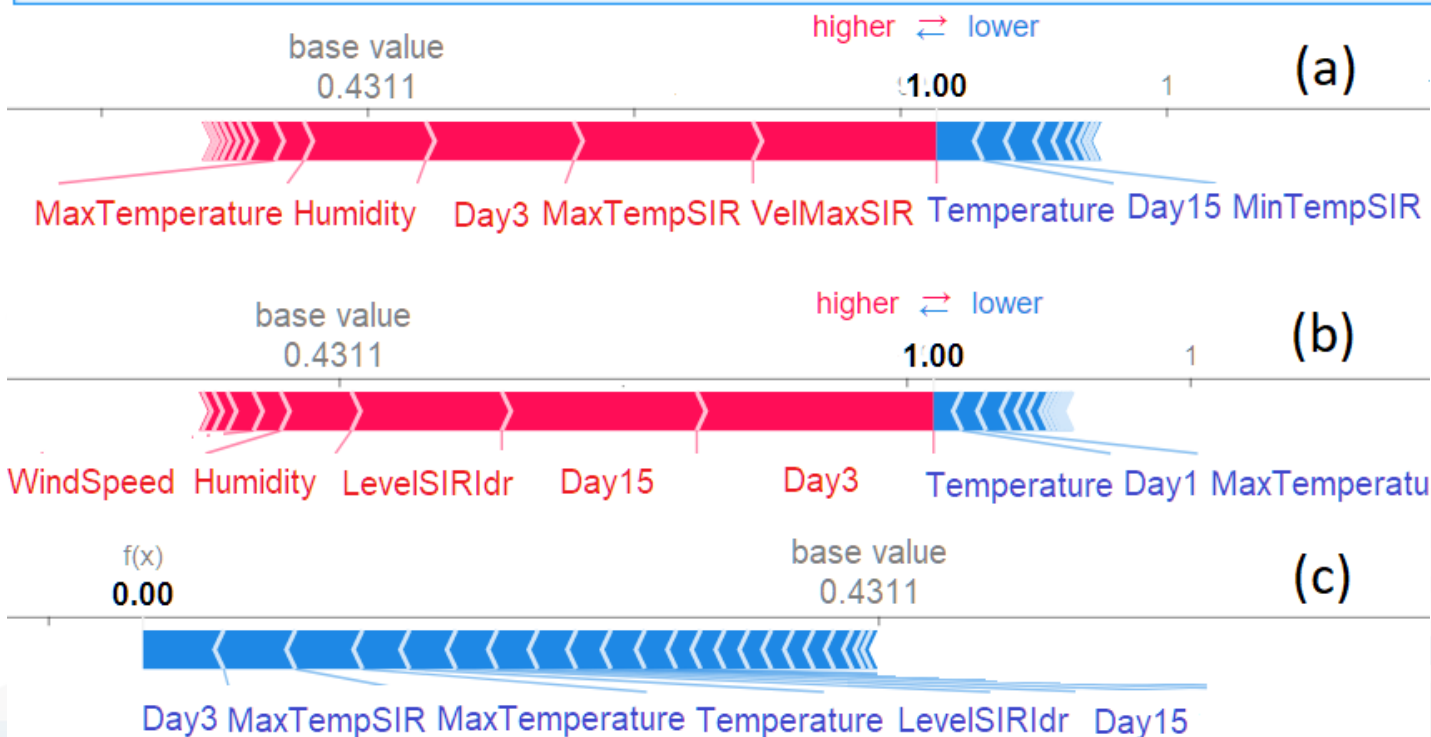

```
shap.summary_plot(shap_val
ues, X_train, features_names)
```

- **Feature importance:** Variables are ranked in descending order.
- **Impact:** The horizontal location shows whether the effect of that value is associated with a higher or lower prediction.
- **Original value:** Color shows whether that variable is high (in red) or low (in blue) for that observation.
- **Correlation:** A high level of “Day3” or “PrecipiSIR” content has a high and positive impact on the classification. The “high” comes from the red color, and the “positive” impact is shown on the X-axis.

# SHAP: Local interpretability

```
with tf.device('/device:GPU:0'):
    explainer = shap.TreeExplainer(MODEL)
    shap_values = explainer.shap_values(X_train)
```

```
shap.force_plot(explainer.expected_value,
shap_values[7,:],fields)
```

- The ability to explain each prediction, is a very important promise in an explainable AI.
- (a) value of VelMaxSIR, MaxTempSIR, Day3 and Humidity contributed significantly to the classification of the observation as a landslide event.
  - (b) values related to rainfall in the last days, LevelSIRldr and Humidity given a relevant contribution to the landslide event prediction.
  - (c) the value of features: Day3, MaxTempSIR, MaxTemperature, Temperature and LevelSIRldr have been determinant for the classification of the observation into a no landslide event.

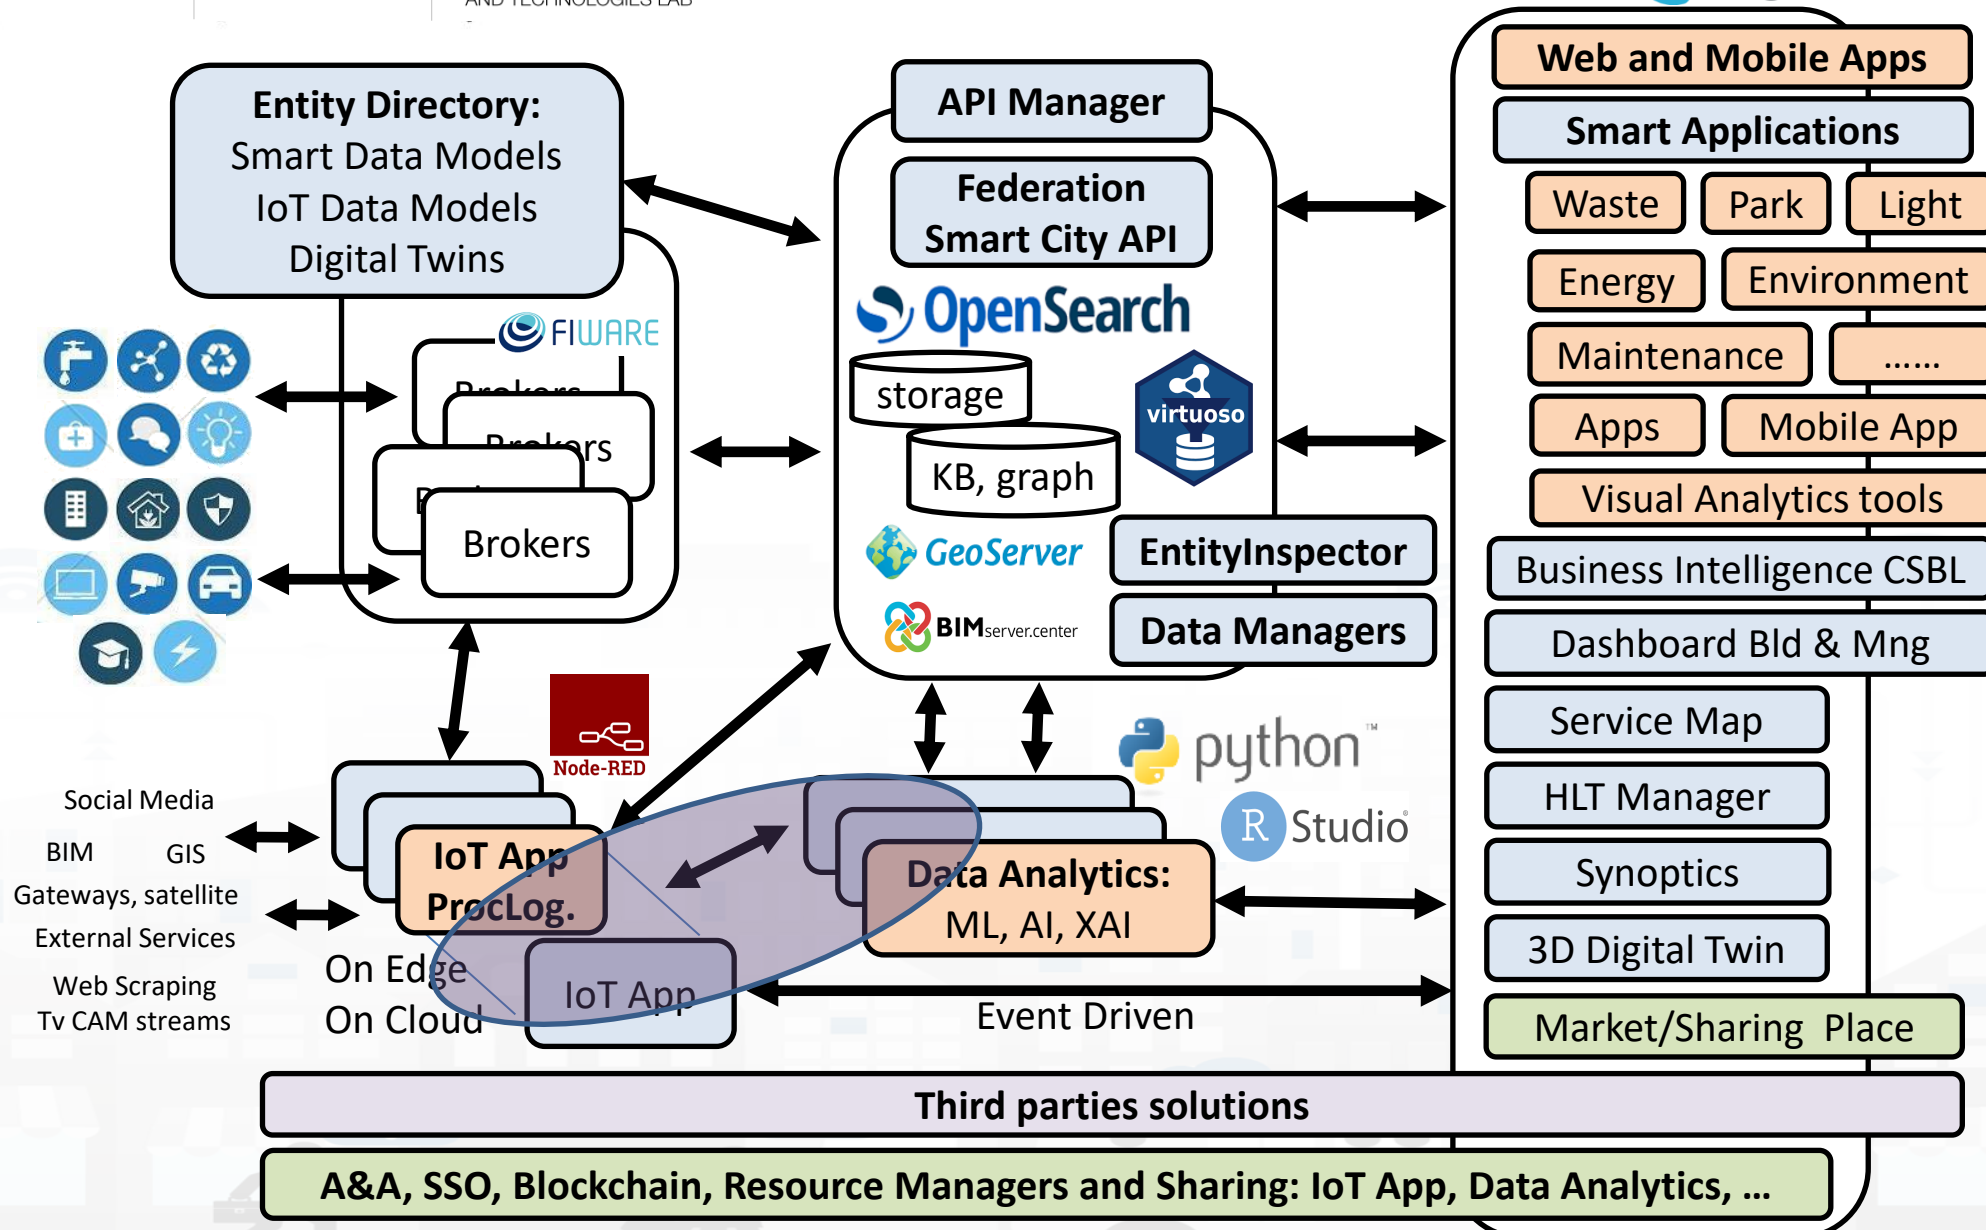

# Data Processing for different purposes on Snap4City

- **Node-RED** Proc.Logic → see Part 3 and 5
  - On Cloud and/or on Edge
- **Python or R-Studio** → see this Part 4
  - On Cloud
  - On Premise on special hardware with NVIDIA boards, HPC infrastructures, etc.
  - On Edge is needed also with Node-RED

# Data Analytic Container

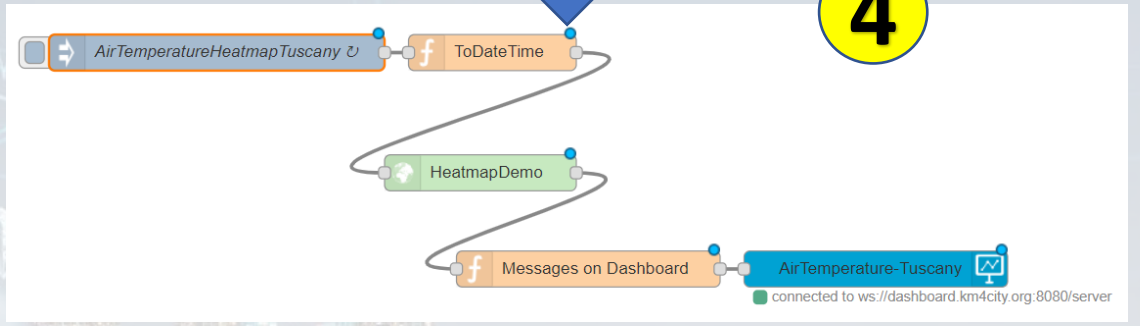

**2** Open an Advanced IoT App / Node-RED

**3** Use Snap4City Data Analytic Node, and load in the code you developed.

**1** Develop .py or .r program on (i) Snap4City platform online, or (ii) your Development Machine.

The code has to respect the guidelines provided for creating API.  
The API are called as a MicroService  
For example see:  
<https://www.snap4city.org/641>  
<https://www.snap4city.org/645>

**4**

**5** Deploy the IoT App → Snap4City Container Manager based on Marathon/Mesos is creating a Container for your Data Analytic code

# VIDEO

## WorkShop working with Data Analytics on Node-Red using the SCAPI

- R data retrieval from a public sensor in a specific window of time

- Python data retrieval from a private sensor in a specific window of time

Min - Mean - Max  
computing

<https://www.youtube.com/watch?v=axAR6u4suQU>

# WorkShop

## working with Data Analytics on Node-Red using the SCAPI

- R data retrieval from a public sensor in a specific window of time

- Python data retrieval from a private sensor in a specific window of time

Min - Mean - Max  
computing

## Device selection

- You can choose between a multitude of Devices inside the Snap4City Platform
- A useful online user interface is available at <http://servicemap.km4city.org/WebAppGrafo/>
- Or you can of course use your devices created in the platform

For this workshop we have identified two sensors:

- a public one whose service\_uri (the link identifier of the resource) is `http://www.disit.org/km4city/resource/iot/orionUNIFI/DISIT/METRO762`
- a private one accessible through an authentication procedure whose service\_uri is `http://www.disit.org/km4city/resource/iot/orionUNIFI/DISIT/118907.682_485819.390-Plastic`

## SCAPI ?

- The Snap4City API allows you to formulate requests to get different results based on your needs
- The documentation is accessible at:  
<https://www.km4city.org/swagger/external/index.html>
- Under Services it is possible to retrieve data from a specific device
  - identified by its service\_uri
  - specifying the temporal windows fromTime - toTime
- regarding the public traffic sensor it is reported below the GET request  
<https://servicemap.disit.org/WebAppGrafo/api/v1/?maxResults=10000&lang=en&geometry=false&format=json&serviceUri=http://www.disit.org/km4city/resource/iot/orionUNIFI/DISIT/METRO762&realtime=true&fromTime=2021-04-14T00:00:00&toTime=2021-07-13T08:04:21>

# Private Device Data Retrieval

1) for accessing a private device data you'll need to have an

ACCESS TOKEN

2) to get the `access_token` you'll to make a POST request specifying the username and password of the owner of the resource or the delegated ones.

```
url = "https://www.snap4city.org/auth/realms/master/protocol/openid-connect/token/"  
data = {"client_id": client_id, "grant_type": "password", "username": utente, "password": password}  
r=requests.post(url, data)
```

```
{  
  "access_token": "eyJz93a...k41aUWw",  
  "token_type": "Bearer",  
  "expires_in": 86400  
}
```

3) same get request for the one of the traffic sensor, but with the additional header with the `access_token`

## HANDS ON!

```
"toTime": "2021-07-13T08:04:21",  
  "fromTime": "2021-07-  
01T08:04:21",
```

```
"start_date" : "2021-01-21T00:00:00",  
"end_date" : "2022-03-09T00:00:00",
```

Min - Mean - Max  
computing

# WHAT-IF Analysis

**9** INDUSTRY, INNOVATION  
AND INFRASTRUCTURE

**11** SUSTAINABLE CITIES  
AND COMMUNITIES

**12** RESPONSIBLE  
CONSUMPTION  
AND PRODUCTION

Data Analytic

# Decision Support Systems, What-if

## ○ Event planning, via what-if analysis

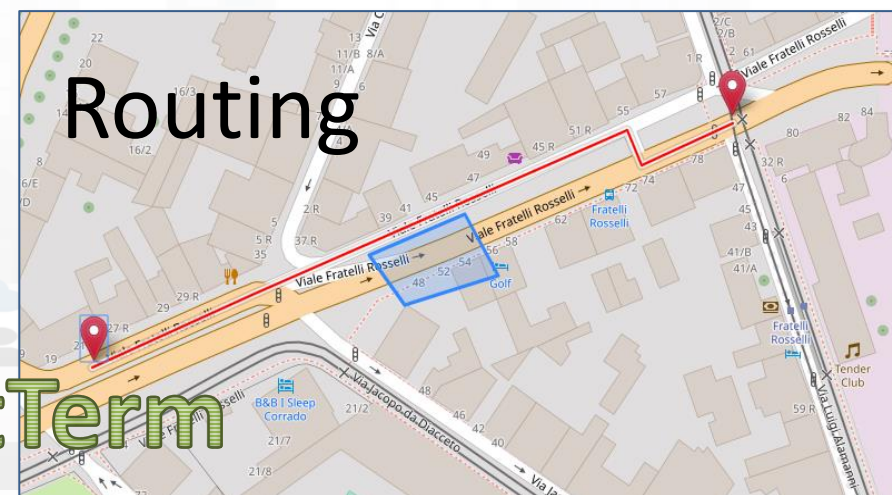

- Change in the graph structure of the city
- Impact on the flow of people and vehicles
- Adaptation: public transport, traffic, pedestrian management, etc.

## ○ Immediate reaction to natural events or not

- Everything is ready and updated in real time
- Each view is contextualized in terms of data: descriptive and prescriptive

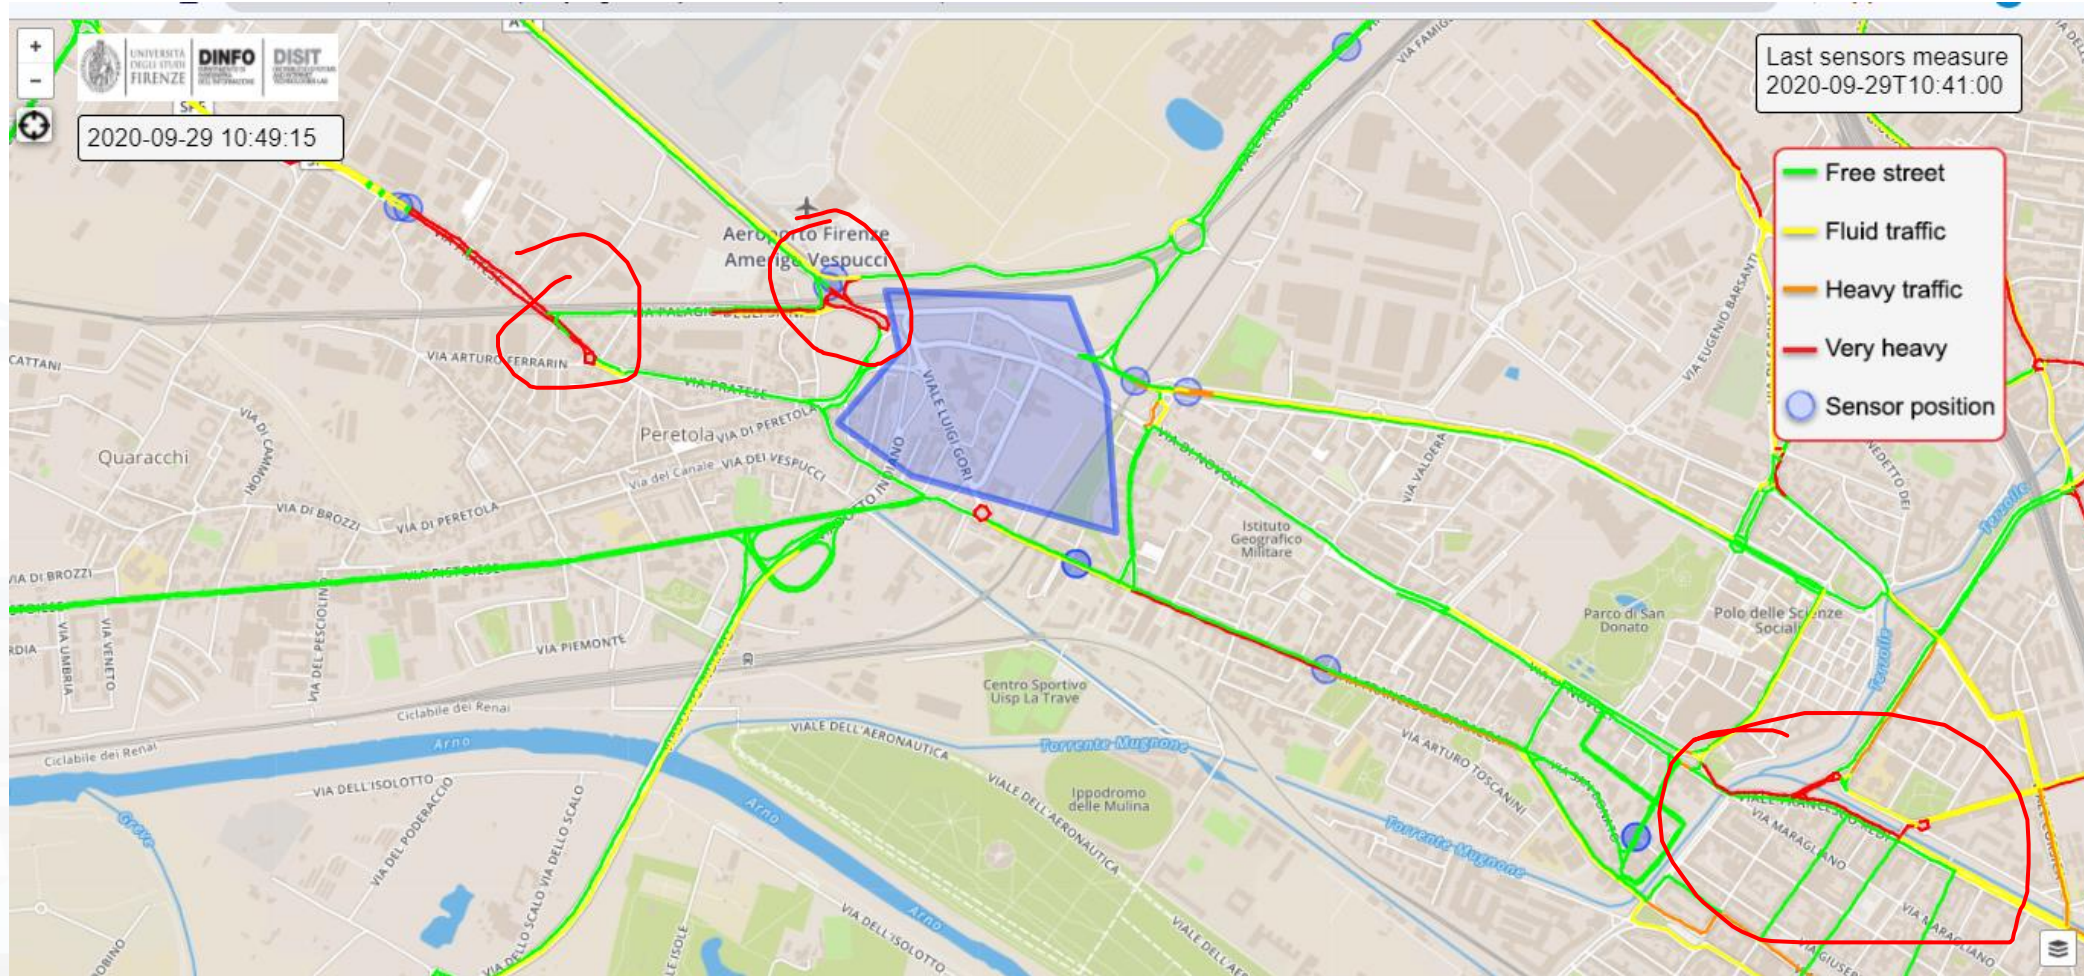

## ○ Digital Twin

- More detail in the context integrated data
- Greater realism in deductions and representations
- Less fragmentation and non-uniformity in the views to support decisions

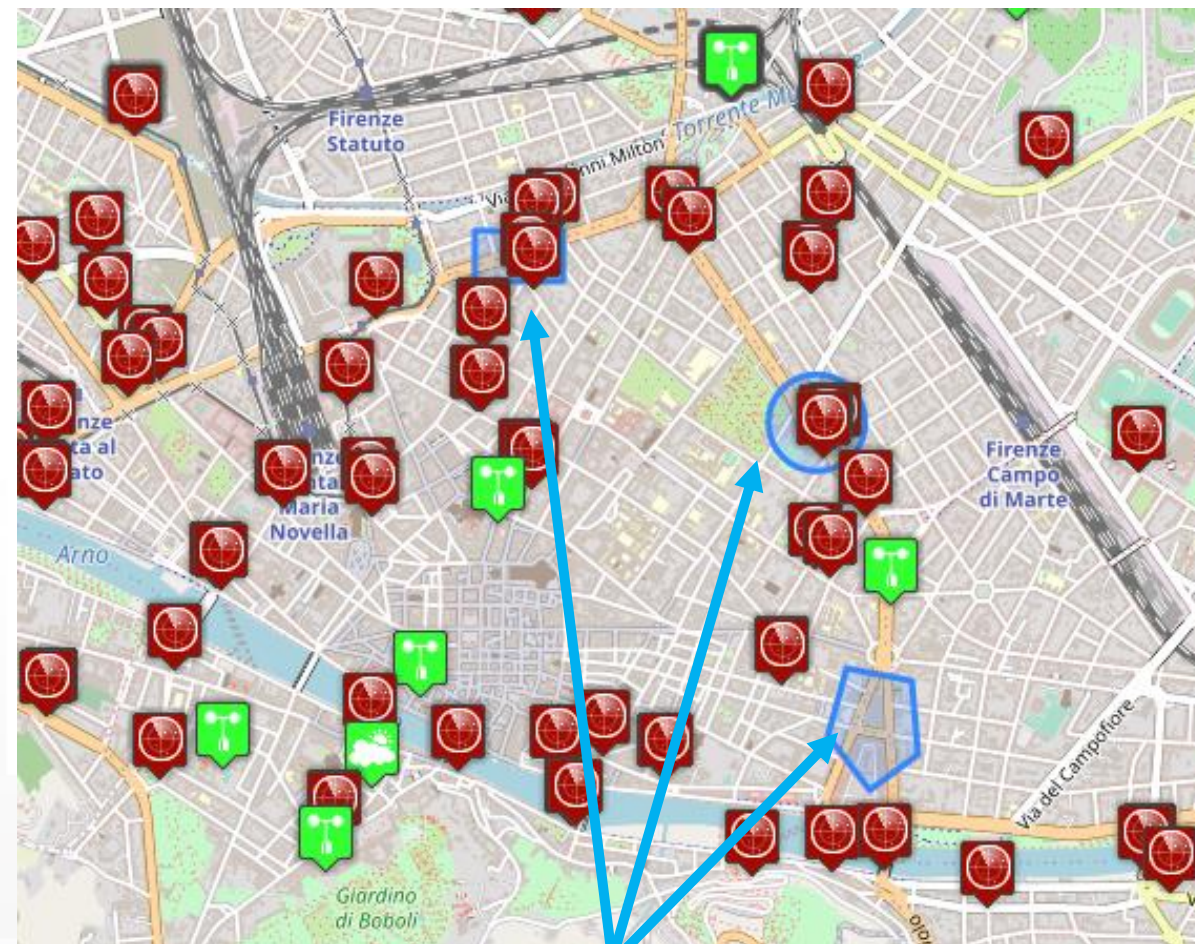

# Computation of Traffic Flow Evolution, cascade effects

# What-If Analysis Concepts

- What is going to happen at Services if certain conditions/cases are going to occur
- Formalize: Conditions/cases, Services
- Scenarios of Cases+Services Vs Solutions are Studios
- You can define, save, load:
  - Scenarios and Studios

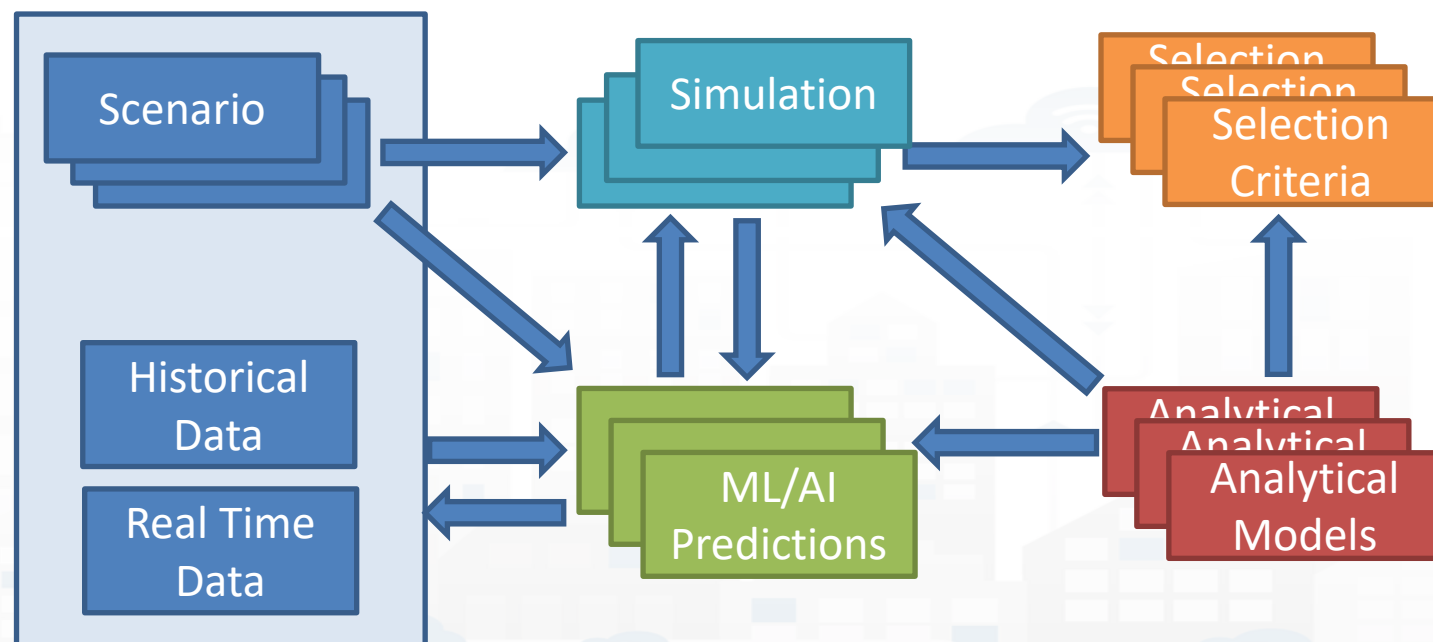

**Scenario**

## What-if: what is going to happen if ... this and that

- **What is going to happen at:**
  - People, Economy, Society, ..
  - Traffic, Pollutant, Parking, structures
  - Equipment, ... ..
- **if certain unexpected events would occur**
  - Scenario definition
  - Guessing future data...
- **Taking into account**
  - Historical Data
  - Real Time Data
  - Contextual data

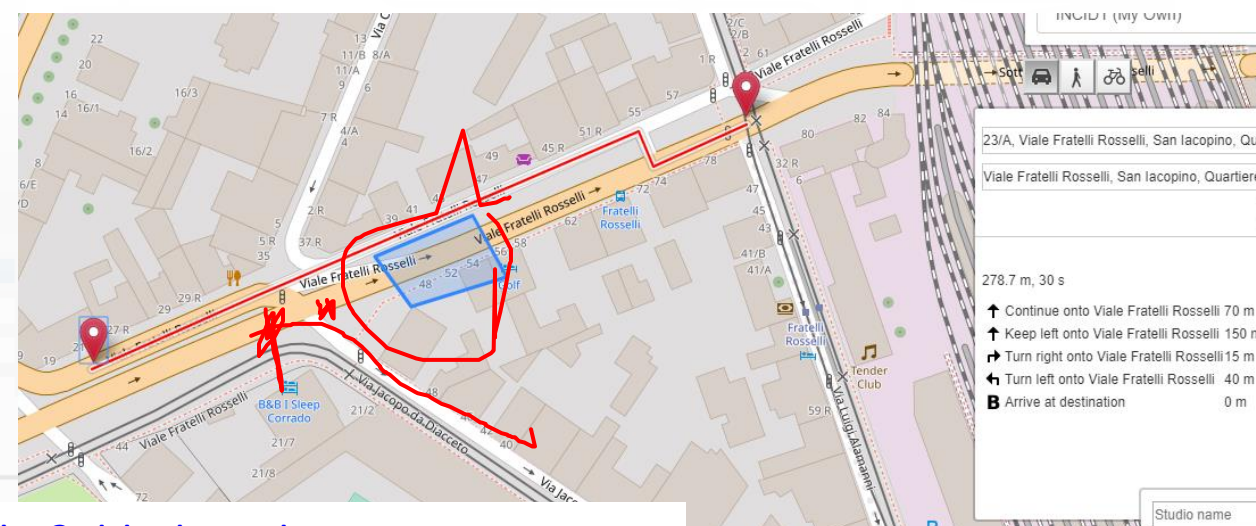

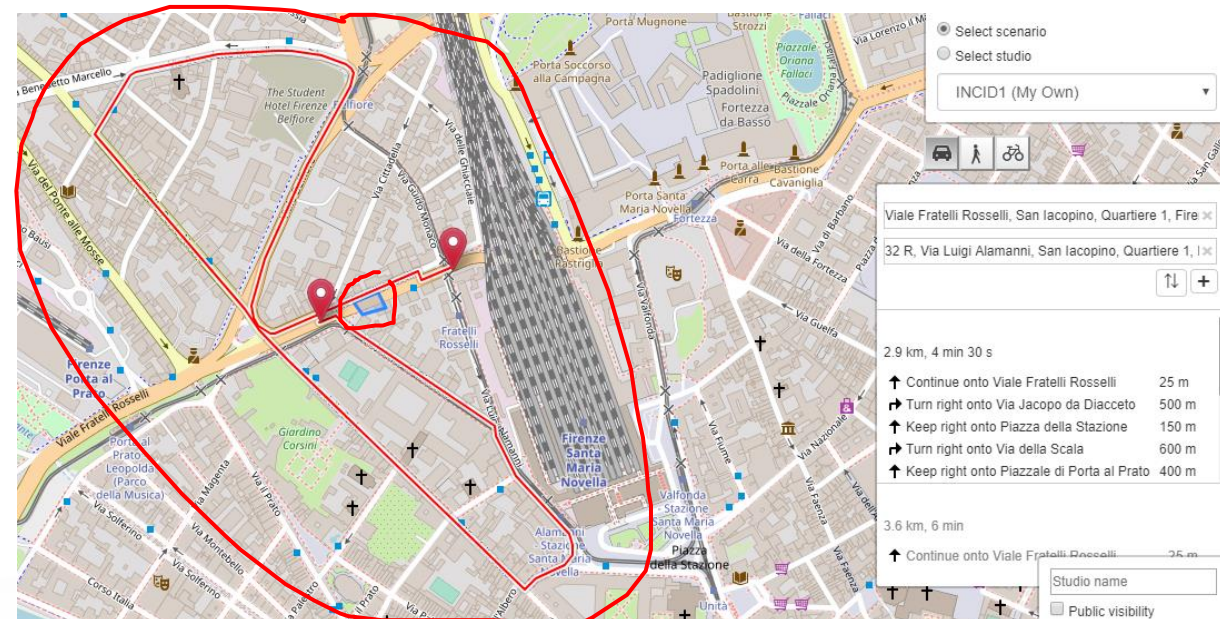

Accidents and elements blocking Points and Shapes taken into account for:

- Routing
- Traffic Flow reconstruction
- Evacuation paths
- Rescue team paths

Assessment on the basis of changes:

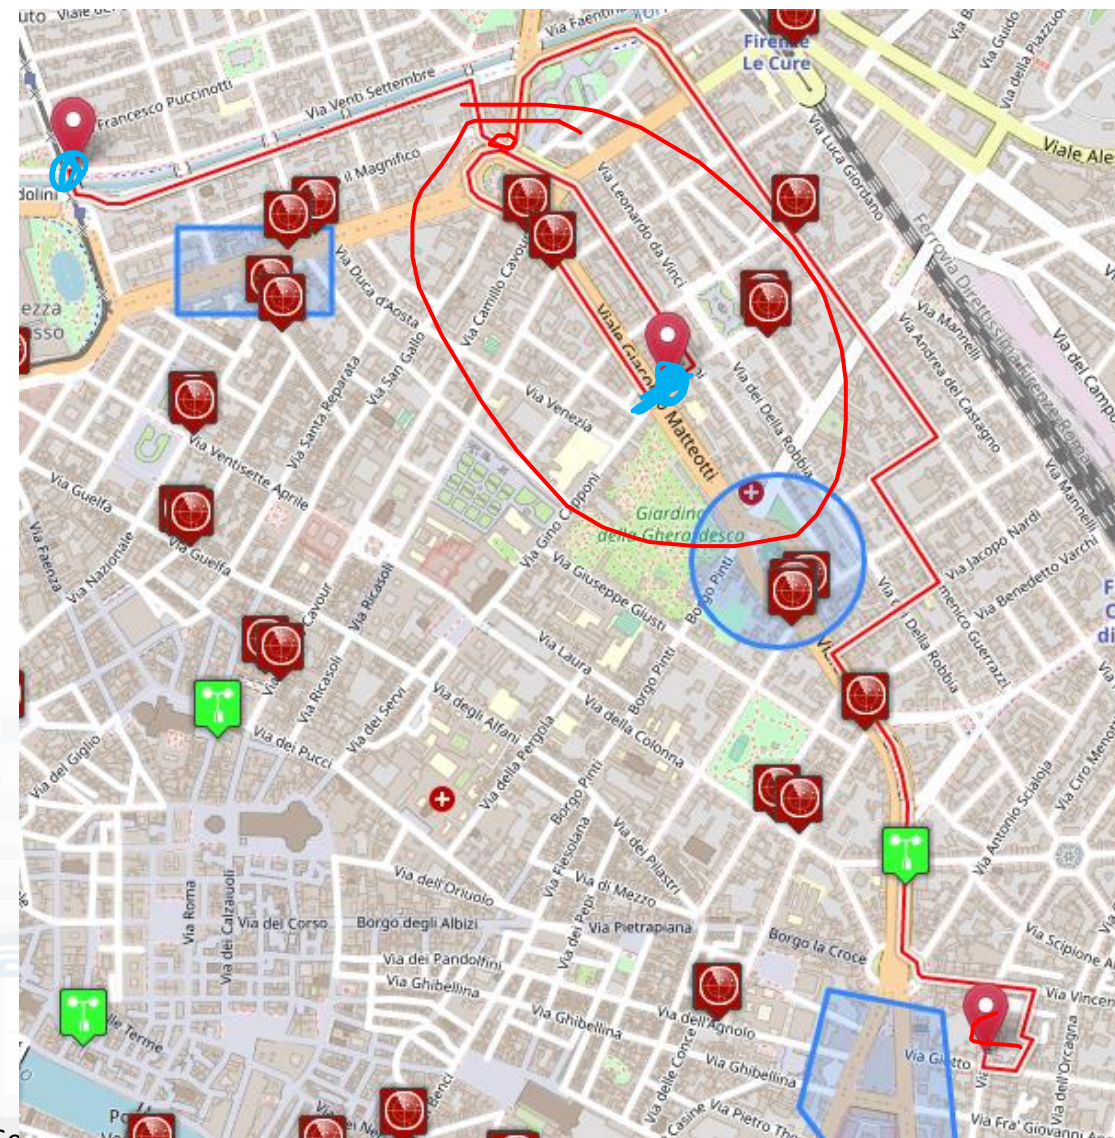

- Mobility demand assessment
- Mobility Offer assessment

# Impact on Routing

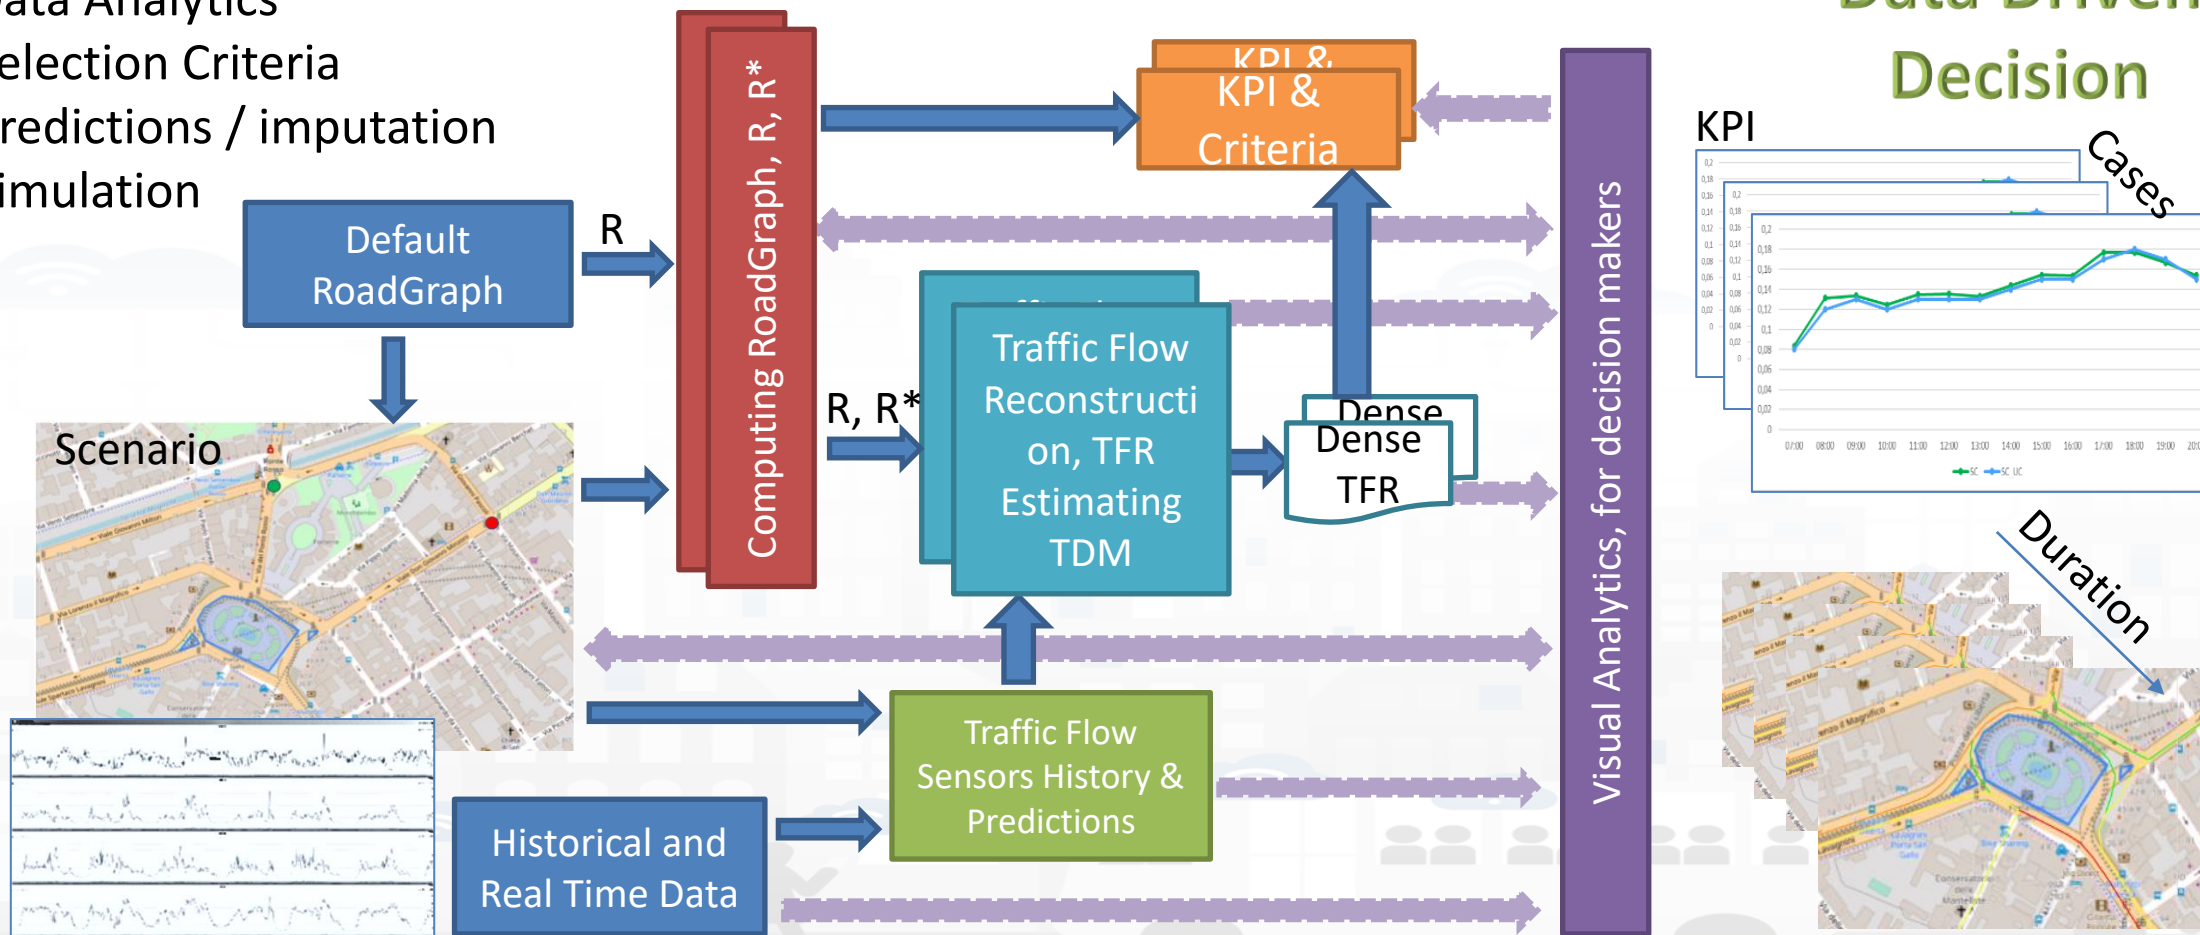

- Scenario with multiple shapes
- Conditional Routing
  - avoiding areas or
  - reducing traffic in those areas
  - Multiple stop points

# What-if: Simulation for Traffic Flow

At the same color corresponds the same area:

- Data / information
- Data Analytics
- Selection Criteria
- Predictions / imputation
- Simulation

## Data Driven Decision

City Mobility Operator(s)

analysis of the offer vs demand (DORAM)

GTFS variation to improve the efficiency of the service

Planned Bus/Tram/Train/ etc. stops/trips and timetables (GTFS)

## What can produce the Analysis tool by KPI

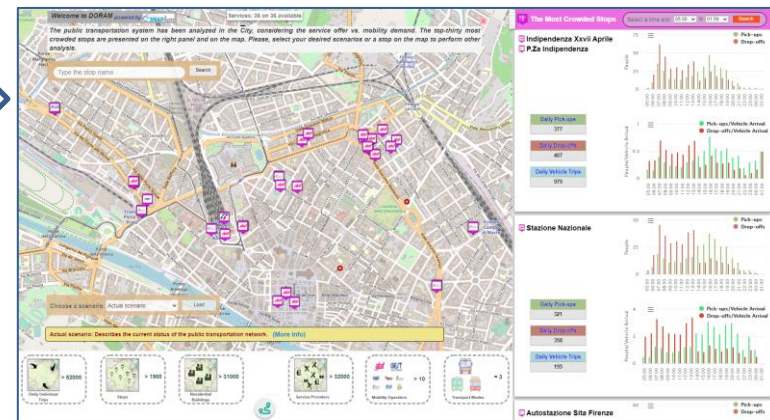

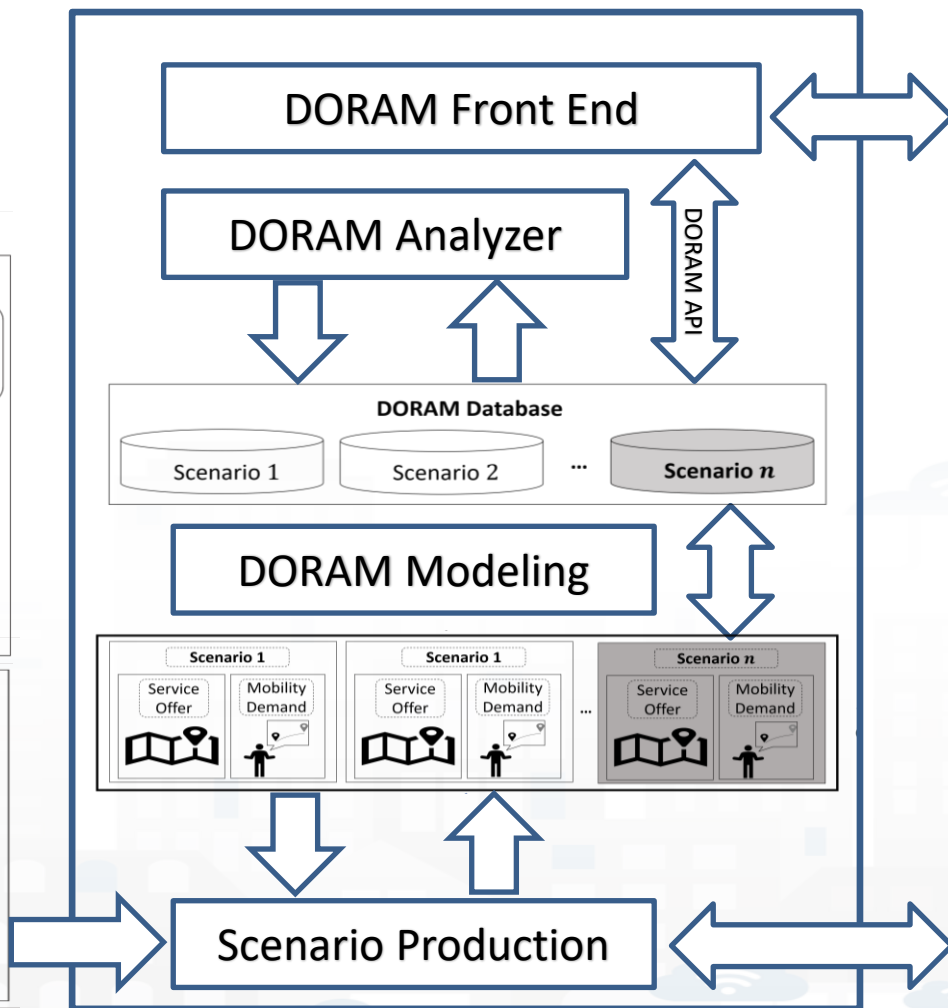

- Identification of critical Bus Stops over time
- Identification of critical courses of bus lines, over day and week
- Effects of changing the position of Bus Stops, courses and line schedules, bus size, etc.
- Effects of changing the contextual conditions:
  - The opening of shopping centers, cinemas, schools, etc..
  - Changes on city structure and paths
  - Size of the buses

**11** SUSTAINABLE CITIES AND COMMUNITIES

**15** LIFE ON LAND

Data Analytic

# Routing

- **Routing:** From XX to YY, Travel means:
  - private as cars, bike, pedestrian, ..
  - Public: busses, tramway, train, etc.
- **Multimodal routing:** public travel means (busses, train, metro, etc.), pedestrian, etc.
- **Taking into account:**
  - Multiple intermediate points
  - Constraints/preferences:
    - size of roads, pollutant, traffic, obstacle/barriers, noise
    - Limitations on paths per vehicle kind
- **Dynamic Routing** enabling the addition of constraints on the user interface. For example: *barriers*

# Predictive Maintenance

7 AFFORDABLE AND  
CLEAN ENERGY

9 INDUSTRY, INNOVATION  
AND INFRASTRUCTURE

- **ALTAIR SODA-4.0 project**
  - maximize the efficiency and productivity of plants, reducing downtime
  - in order to improve competitiveness in the market

- **Goals and drivers:**
  - Business intelligence tools on maintenance data
  - predictive maintenance approach into the whole control and management systems Predictive models for engagement
  - predict plant failures 60 minutes before it happens
  - Provide indications on the area of failure via XAI

# Complex cause-effect relationships

- **Elements:**

- Machines: A...C
- Storage: silos...
- Flows:...

- **Dependencies**

- Cascade effects

- **Early warning**

- Reduction of costs
- Recovering from failure is more expensive than correcting in advance
- Possible advanced replan and reschedule: secondary solutions

# Considerations

- results shown an average Accuracy of 91.8% and an average F1-score of 90%, which are very satisfactory results
- Explanation of the predictions provides suggestions for the maintenance teams in terms of areas of intervention.
- Large renovation of the production infrastructure.

## Welcome: how to start using Snap4City for beginners

### We suggest you:

Congratulations! You have really contributed to Snap4City and successfully passed all first levels!

You have reached a level in which you can contribute with competence to the city improvement and smartness. We hope you interested in helping other users in conquering higher levels on the city smartness ranking, and provising of smart services to all city users!

So that we could be interested in engaging and elevating your role in the Snap4City community as coordinator of thematic groups, for example on **Mobile APP development**, **Dashboard on Mobility**, **IOT Application Development**, etc., according to your preferences.

Please contact [paonesi@gmail.com](mailto:paonesi@gmail.com) !

SMART CITIES AND SMART INDUSTRY

**Snap4City:**  
**FIWARE powered smart app  
builder for sentient cities**

With the contribution of

TOP

# Acknowledgements

**2013 Km4City Ontology 1.1**

- Tuscany, Road Graph
- Mobility
- culture, tourism
- Events
- Parking
- Services
- Linked open graph

**2014**

- Weather Forecast
- Real Time Wi-Fi
- Entertainment
- LOD

- Twitter Vigilance
- Social Media Analytics, Sentiment Analysis

**Km4City 1.4**

**2015**

- Resilience Decision Support
- Smart First Aid
- User Behaviour Analysis, predictions
- Risk Analysis

**(2016-21) H2020 REPLICATE**

- Smart Energy
- Sustainable Mobility
- Control Room
- Dashboard

**Km4City 1.6.2**

- SII-MOBILITY SCN**
- Infomobility
  - Mobile App
  - Routing
  - Multimodality

**Km4City 1.5**

- GREEN IMPACT**  
POR FESR 2014-2020
- Industry 4.0
  - Critical Plant
  - Monitoring

**Km4City 1.6.4**

- Origin-Destination and trajectories
- Traffic Reconstruction
- Offer Analysis
- OBU, smart devices

- GHOST SIR**
- Sardinia Region Smart City Strategies and plan

- IOT/IOE, IOT App
- Living Lab
- Maker Support
- IOT Edge
- Smart City IOT
- GDPR,
- Privacy & Security

**2018**

- User engagement
- Bike Sharing
- Data Analytics ++
- Social Predictions
- OBD2

- Smart Waste

**MOSAiC**  
MOBILITY 4.0 FOR SMART (II) CITY  
(2018-20)

- Mobility Demand / Offer
- Analytics and Strategy

**SNAP4CITY**

- Traffic and Mobility Impact on Pollution
- NOX predictions

Winner of Select4Cities PCP

**DISIT lab roadmap vs model and tools' usage**
